# Practical: Skills to be developed:

# **Intellectual Skills:**

- Selection of transducer based on application.
- > Interpretation of results.

# **Motor Skills:**

- > Connection of different transducers with measuring system.
- > Measurement of various physical parameters using transducers.
- > Observation and plotting the characteristics.

#### List of Practicals:

| Sr. No. | Title of the Experiment                                                     |  |  |  |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Electronic Communication plays vital role in our lives. Development of communication Technology has increased its application in allied field of electronics including Telephony, telegraphy, satellite, Mobile, RADAR, industrial controls, online application like internet banking, ATM machine, Wireless network, optical communication, Mobile communication system.

Analog communication is a foundation for all advanced subjects in communication engineering. This subject will focus on the operation of analog transmission and reception techniques. This subject also deals with pulse modulation and their different types.

Study of Elements of Electronics, Electronic Devices and Circuits is prerequisite for Analog communication subject.

#### **General Objectives:**

The student will able to

- 1. Know different electronic communication systems.
- 2. Understand concept of modulation and demodulation of AM / FM.
- 3. Understand the operation of AM/ FM transmitter and receiver.
- 4. Understand the concept of radio wave propagation.

## **Learning Structure:**

# **Theory Contents:**

| Topic | Theory                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Hrs. | Marks |

# Practical: Intellectual Skills:

1. Interpret the output results

# **Motor Skills:**

- 1. Testing and observing the waveforms at various stages
- 2. Fault finding
- 3. Measurement of different parameters like sensitivity, selectivity, fidelity
- 4. Small circuit development

# List of Practical's

| Sr.<br>No. | Title of the Experiment                                                                                    |  |
|------------|------------------------------------------------------------------------------------------------------------|--|
| 01         | Observe and draw the waveform of AM and calculate modulation index of AM.                                  |  |
| 02         | Observe and draw input / output waveforms of AM detector.                                                  |  |
| 03         | Observe and draw the waveform of FM and calculate modulation index of FM.                                  |  |
| 04         | Observe and draw the waveforms of FM modulator using IC 566.                                               |  |
| 05         | Observe and draw the waveforms of FM demodulator using IC 564 / IC 565.                                    |  |
| 06         | Observe the waveforms at various points in AM receiver. Trouble shooting and fault finding in AM receiver. |  |
| 07         | Observe and plot the graph of RF characteristics of Radio Receiver: Sensitivity & Fidelity                 |  |
| 08         | Generate PAM and observe the waveforms of PAM.                                                             |  |
| 09         | Generate PWM, PPM and observe the waveforms of PWM, PPM using IC's.                                        |  |
| 10         | Plot the radiation pattern of dipole and Yagi-Uda antenna.                                                 |  |
| 11         | Measure the characteristic impendence of co-axial cable. Find the impendence and VSWR.                     |  |
| 12         | Visit to the Radio Transmitter station and write a Transmitter specification.                              |  |

| Subject Title | : Power Electronics                |
| Subject Code  | : 17444                            |

#### **Teaching and Examination Scheme:**

| Teaching Scheme |    |    |              |     | Examination | on Scheme |     |       |
|-----------------|----|----|--------------|-----|-------------|-----------|-----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH  | PR          | OR        | TW  | TOTAL |
| 03              |    | 02 | 03           | 100 | 25#         |           | 25@ | 150   |

# NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Day by day the change in Electronics Industry is dynamic. The role of Diploma engineers changed over the years. Engineers should have concepts of industrial electronics. Electronic control circuits have major role in Industries for which study of power devices is essential.

Concepts of electronic devices and circuits along with their applications are necessary. Industrial electronic is the foundation subject to study industrial drives, and advanced industrial electronics.

#### **Objectives:**

Students will be able to:

- 1. Understand construction and operating principle of various power electronic devices.
- 2. Study construction and operation of controlled rectifiers, choppers and inverter and industrial control circuits.

## **Learning Structure:**

# Theory:

| Topic<br>No | Contents                                                                      | Hours | Marks |
|-------------|-------------------------------------------------------------------------------|-------|-------|

#### **Practical:**

Skills to be developed:

# **Intellectual Skills:**

- 1) Selection of proper devices and instruments.
- 2) Interpretation of characteristics under various conditions.

# **Motor Skills:**

- 1) Make accurate measurements.
- 2) Adjust proper firing angle.
- 3) Observe and draw the output waveforms
- 4) Conduct test on control circuits.

# **List of Practicals:**

- 1) Plot output characteristics of power transistor.
- 2) Plot V-I characteristics of IGBT.
- 3) Determine the break over voltage using of DIAC.
- 4) Determine latching current and holding current using I-V characteristics of SCR.
- 5) Effect of variation of R, C in R and RC triggering circuits on firing angle of SCR.
- 6) Effect of variation of R in UJT Triggering technique.
- 7) Draw the output waveforms of three phase half wave Rectifier using diodes.
- 8) Draw the output waveform of half wave controlled rectifier with resistive load and determine load voltage.
- Draw the output waveform of full wave controlled rectifier with resistive load, resistive-Inductive load, freewheeling Diode and determine load voltage.
- 10) Determine the effect of firing angle using DIAC and TRIAC on output power (using different loads such as bulb, motor or heater).

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Modern age technology has developed on high density and high speed electronics circuits. Integrated circuits are basis of these high density circuits enabled to reduce size, weight and cost of equipments. They have intrinsic features such as low power consumption, low noise and ease of design.

Today the growth of any industry depends upon electronics to great extent. Contents of this subject are the basic building blocks of different analog circuits.

Basic operating and designing principle of such a large collection of circuits establishes a foundation for understanding new development in the electronics field, instrumentation and power control. This subject acquaints student with general analog principles and design methodologies using integrated circuit for system design.

Prerequisites various devices and circuits studied in elements of electronics and electronic devices and circuits. Prospects- LSI, MSI, VLSI.

#### **General Objectives:**

Students will be able to:

- Understand working principle of Op-Amp and IC555
- Develop electronics circuits using timer IC555 and Op-Amp

• Analyze the response of frequency selective circuits such as PLL with respect to the incoming signal.

# Practical:

# **Intellectual Skills:**

- 1. Interpret the waveforms.
- 2. Find faults in circuits.

#### Motor Skill:

1. Testing and Measurement.

# **List of Practicals:**

| Sr. No. | Title of the Experiment                                                                 |
|---------|-----------------------------------------------------------------------------------------|
|         | Determine the op-amp parameters:                                                        |
| 01      | • Input Offset Voltage (V <sub>io</sub> )                                               |
| 01      | • Output Offset Voltage (V <sub>oo</sub> )                                              |
|         | Common mode rejection ratio (CMRR)                                                      |
| 02      | Determine the gain of Inverting and Non-inverting amplifier using op-amp and            |
| 02      | compare it with theoretical gain.                                                       |
| 03      | Verify the operation of Adder and Subtractor circuit using op-amp IC 741.               |
|         | Verify the working of active integrator and differentiator circuits using op-amp IC 741 |
|         | for following inputs:                                                                   |
| 04      | • Sine waveform                                                                         |
|         | • Square waveform                                                                       |
|         | Rectangular waveform                                                                    |
| 05      | Assemble V to I converter and I to V converter using IC 741 and measure the             |
| 03      | respective output.                                                                      |
|         | Verify the working of following comparator circuits using op-amp IC 741 and draw the    |
| 06      | input-output waveforms                                                                  |
| 00      | • Zero crossing detector                                                                |
|         | Active peak detector                                                                    |
| 07      | Assemble first order low pass Butterworth filter using op-amp and plot the frequency    |
| 07      | response and determine its cutoff frequency.                                            |
| 08      | Assemble Astable multivibrator circuit using IC 741. Plot the output waveform and       |
|         | determine the frequency of oscillations and duty cycle.                                 |
| 00      | Assemble Monostable multivibrator circuit using IC 555. Plot the output waveform        |
| 07      | and determine the on-time.                                                              |
| 10      | Assemble Schmitt trigger circuit using IC 555. Plot the output waveform and             |

|    | determine UTP and LTP                                                             |
|----|-----------------------------------------------------------------------------------|
| 11 | Assemble Instrumentation amplifier circuit using IC 324 and determine the overall |
|    | gain.                                                                             |
| 12 | Verify the operation of frequency Multiplier using PLL IC 565 and determine the   |
|    | output frequency.                                                                 |

**Course Name : Electronics Engineering and & Video Engineering Group** 

Course Code : ET/EJ/IE/IS/EN/EX/IC/MU/EV/DE/IU/ED/EI

Semester : Fourth

Subject Title : Visual Basic

Subject Code : 17043

#### **Teaching and Examination Scheme**:

| Teaching Scheme |    |    |              | Examinati | on Scheme |    |     |       |
|-----------------|----|----|--------------|-----------|-----------|----|-----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH        | PR        | OR | TW  | TOTAL |
| 01              |    | 02 |              |           |           |    | 25@ | 25    |

#### **Rationale:**

Today's most of the electronically operated devices, integrated circuits, controllers, equipments, gadgets are run by specific drivers/software. To understand design, develop and write drivers programming knowledge is required. To run the devices software has to be user friendly. New approach is to use graphical user interface. Graphical user interface can be implemented using visual software's.

Traditionally visual basic is the most popular, versatile, suitable, simple and commonly used visual programming language to write efficient, compact and portable interfaces, drivers/ software's.

The subject will enable the students to inculcate visual programming concepts and methodology used to write, debug, compile and execute simple visual basic programs using different powerful data types, built in visual controls and integrated visual basic environment (IDE) provided by Microsoft visual studio. Students will be exposed to event driven programming and bottom up approached used in objects oriented programming.

Students will understand how a complex interface can be easily implemented in visual basic with almost no programming expertise.

This course will lay the basic foundation of visual programming which will enable students to develop simple to complex programmable systems interfaces in the real world of work

#### **General Objectives**

Students will able to.

- 1. Learn visual programming development environment, concepts and methodology.
- 2. Use essential components (visual tools ) of Visual software's
- 3. Develop the skill of visual basic programming to build custom standalone applications
- 4. Develop applications with Multiple documents interface (MDI) using common dialog, menus and graphics
- 5. Use ADO for database connectivity with different databases.
- 6. Create simple reports using data report, Seagate crystal reports and integrating it with visual basic
- 7. Develop applications using class modules

# **Learning Structure:**

# Theory

| Name of Topics                                                                                                                                      | Hours |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Topic 1] Introduction to Visual Environment                                                                                                         |       |
| Specific Objectives:                                                                                                                                |       |
| Familiar with IDE of Visual basic                                                                                                                   |       |
| Use concepts of object based language                                                                                                               |       |
| <ul> <li>Use basic elements of visual interface</li> </ul>                                                                                          |       |
| Use properties, events and methods at design time and runtime                                                                                       |       |
| <ul> <li>Create objects, place them on forms</li> </ul>                                                                                             | 02    |
| Contents:                                                                                                                                           |       |
| 1.1 Concepts of visual programming object features properties methods events                                                                        |       |
| 1.7 Environment of VB – Menu har toolbar project explorer toolbox properties.                                                                       |       |
| window form designer form layout immediate window                                                                                                   |       |
| 1.3 Concept of project elements of projects form their properties methods and events                                                                |       |

| Contents:                                                                                                                                           |       |
| 5.1 Basic controls: Text box, list Box, Combo Box, Scroll Bar, Irame, Option button,                                                                |       |
| checkbox, command button, OLE controls                                                                                                              |       |
| 3.2 File, Drive, directory, Picture box, image and timer controls .Designing a form                                                                 |       |
| using controls, concepts of event & properties, changing properties (runtime &                                                                      |       |
| design time) important events of each control & creating applications using                                                                         |       |
| Controls.                                                                                                                                           |       |
| 1 opic 4] Advance Controls & Events                                                                                                                 |       |
| Specific Objectives:                                                                                                                                |       |
| Add extrinsic controls in an application                                                                                                            |       |
| Use common dialog box control and its properties such open, save as, font,                                                                          | 03    |
| color, print and neip                                                                                                                               |       |
| ➤ Use rich text box to design simple ms-word like application                                                                                       |       |
| ➤ Use and create explorer like utilities using tree view and list controls                                                                          |       |
| ramilar with windows common controls                                                                                                                |       |

| Contents:                                                                               |    |
|-----------------------------------------------------------------------------------------|----|
| 4.1 Common Dialog Box controls, The Tree view and List, View controls, the rich         |    |
| textbox controls                                                                        |    |
| 4.2 Windows common controls – status Bar, Tab control, image list control, Important    |    |
| properties, changing properties at design or run time, event handling.                  |    |
| Topic 5] Module, Class Module, Mdi, Menu Graphics                                       |    |
| Specific Objectives:                                                                    |    |
| Write class modules                                                                     |    |
| Define functions and procedures in class module                                         |    |
| Access functions and procedures from class module                                       |    |
| Use multiple document interface                                                         |    |
| Design menu based applications such as notepad editor                                   |    |
| Work with graphic functions and methods                                                 | 03 |
| Contents:                                                                               |    |
| 5.1 Concept of module, class module, using class module to define functions,            |    |
| procedures, variables and accessing them using objects                                  |    |
| 5.2 MDI- MDI form and child form, Creation and use in                                   |    |
| 5.3 Menu: Creating own menu using menu editor, popup menu.                              |    |
| 5.3 Graphics: Basic controls – Line & shape control, line method, circle method, Pset   |    |
| method, RGB () Functions, Paint picture () method, Load picture () function.            |    |
| Topic 6] Database and Report                                                            |    |
| Specific Objectives:                                                                    |    |
| Create database                                                                         |    |
| Use ADO and its properties, methods and events                                          |    |
| Select appropriate concepts such as back-end and front-end                              |    |
| Make database connectivity with different databases                                     |    |
| Generate report using Data Report and Crystal Report                                    |    |
| Contents:                                                                               | 04 |
| 6.1 Concept of database, Record, Record set, Data control & its important properties    | 04 |
| 6.2 validating data, entering data, visual data manager.                                |    |
| 6.3 Programming with ADO ( Active data objects ), using ADO Objects at design time-     |    |
| connection, command, record set, parameter, Creating & closing a connection;            |    |
| executing a command,                                                                    |    |
| 6.4 Using ADO Objects at run time, attaching visual controls to record set at run time, |    |
| Using delete, save, search, update exit, new, add, methods.                             |    |
| 6.5 Report generation using data report and crystal report                              |    |
| Total                                                                                   | 16 |

Subject Code : 17044

### **Teaching and Examination Scheme:**

| Teaching Scheme |    |    | Examination Scheme |    |    |    |     |       |
|-----------------|----|----|--------------------|----|----|----|-----|-------|
| TH              | TU | PR | PAPER<br>HRS       | TH | PR | OR | TW  | TOTAL |
|                 |    | 03 |                    |    |    |    | 50@ | 50    |

# **Rationale:**

Most of the diploma holders join industries. Due to globalization and competition in the industrial and service sectors the selection for the job is based on campus interviews or competitive tests.

While selecting candidates a normal practice adopted is to see general confidence, ability to communicate and attitude, in addition to basic technological concepts.

The purpose of introducing professional practices is to provide opportunity to students to undergo activities which will enable them to develop confidence. Industrial visits, expert lectures, seminars on technical topics and group discussion are planned in a semester so that there will be increased participation of students in learning process.

# **Objectives:**

To develop the following skills:

# Intellectual skills:

- 1) Analyze information from different sources.
- 2) Prepare reports.

# Motor skills:

- 1) Present given topic in a seminar.
- 2) Interact with peers to share thoughts.
- 3) Prepare a report on industrial visit, expert lecture.

# **Learning Structure:**

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

# INDUSTRIAL TRAINING (OPTIONAL)

# Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

# **Learning Structure:**

# Theory:

#### Practical: Skills to be developed:

#### Skins to be developed

# Intellectual Skills:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

# **Motor Skills:**

- 1. Presentation Skills
- 2. Use of multi media

# **List of Projects:**

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds
- 4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Instrumentation is an emerging field used in data detection, acquisition, analysis and control in industrial applications. Analog and digital instruments are mainly used to determine different process parameters. These instruments present the desired information in visual indication either in analog or digital form. Further, instrumentation deals with conversion of different physical parameters into electrical signal using various transducers.

This subject presumes that the students are familiar with basic utilization of measuring instruments. The era of this subject consists of the information about concepts, principles and procedures of analog and digital electronic measuring instruments and measuring techniques. With the help of transducers measuring instruments different physical parameters like temperature, pressure etc. are measured. Different types of transducers used for measurement of different physical quantities with their construction, working principle, advantages, and disadvantages are studied through this subject.

# **General Objectives:**

#### The Students will be able to:

- 1. Understand the principle & operation of different measuring instruments.
- 2. Select the instrument for the measurement of specific electrical parameter.
- 3. Understand the procedure for fault finding in electronic systems.
- 4. Understand the nature and working of instrumentation system used in industries.

|   | principle, construction, advantages, disadvantages and            |    |     |
|   | applications.                                                     |    |     |
|   | Total                                                             | 48 | 100 |

## Practical Skills to be developed:

# **Intellectual Skills:**

- Selection of instruments based on applications
- > Interpretation of results.
- Selection of transducer based on application.

# Motor Skills:

- > Selection of proper instrument with respect to parameter and range
- Proper connections and interfacing
- > Testing of basic electronic circuits using these instruments
- > Connection of different transducers with measuring system.
- > Measurement of various physical parameters using transducers.

#### **List of Practicals:**

# (Attach a separate sheet in the Manual covering the specifications of instrument/ equipment studied)

- 1. Draw the block diagram of Function generator. Indentify the blocks from circuit. Test and verify function outputs as per specifications.
- 2. Understand the front panel controls of Dual trace CRO and to Measure frequency, voltage, phase difference (by time measurement) using CRO.
- 3. Measure time period and frequency of sine, square and triangular waves using CRO.
- Measure frequency and phase difference of unknown signals with the help of Lissagous pattern by using CRO.
- 4. Prepare the fault finding flow chart for Power supply using multimeter.
- 5. Measure frequency, voltage and modulation index of a signal from AF/RF standard signal generator using CRO.
- 6. Study different output patterns obtained from Pattern generator and use of these patterns to test the performance of different sections of T.V.
- 7. Draw the layout and test the circuit of PA system.
- 8. Displacement measurement using LVDT.
- 9. Flow measurement using electromagnetic flowmeter/ultrasonic flowmeter.
- 10. Temperature measurement using RTD (PT-100).
- 11. Temperature measurement using Thermocouple (using any one from R, J, K)

#### **Learning Resources:**

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Radio reception is important part of wireless communication system. It is necessary for students to understand the concepts of radio receiver and other related equipments and process of generation, radiation and propagation of radio waves.

The subject contains concept of radiation and propagation of radio waves, Transmission lines, Antennas, characteristics and operation of AM and FM radio receivers.

The study of this subject will be useful in understanding various telecommunication system such as TV receivers, Satellite & Radar systems and mobile communication.

#### **General Objectives:**

Students will able to

- 1) Understand propagation of electromagnetic waves
- 2) Understand basic principles of transmission lines.
- 3) Understand construction working principle & operation of various types of antennas.
- 4) Understand block diagram of AM & FM radio receivers and their operation.
- 5) Understand alignment procedure for AM & FM radio receiver.

# **Theory Contents:**

## Practical: Skills to be developed

# **Intellectual skills**

- 1. To incept, analyze & record transmission line properties.
- 2. To study directional pattern of any or given antenna using field strength meter.
- 3. To apply AM input from AM generator to the radio receiver.
- 4. To identify the different stages of AM radio receiver.

- 5. To identify components & follow the instruction as given.
- 6. To analyze & record voltages at different test points of AM radio receiver.
- 7. To analyze frequency adjustment of RF & IF stage.
- 8. To locate the fault by logical analysis of symptoms.
- 9. To verify the output of each stage with standard values.

#### **Motor Skills**

- 1. Installing and testing of experimental set up and tabulate the reading.
- 2. Skill to connect the instrument plots the directional pattern of antenna on polar paper.
- 3. Skill to draw the layout of AM radio receiver.
- 4. Skill to measure the voltages at the different test point using DMM as per procedure.

#### **List of Practical:**

- 1. To measure parameters and attenuation of transmission line
- 2. To measure frequency characteristics and stationary waves of transmission line.
- 3. To plot directional pattern of given antenna.
- 4. To observe different section & draw layout of AM radio receiver and to measure the voltages of different section of transistorized AM radio receiver.
- 5. To observe different section & draw layout of FM radio receiver and to measure the voltages of different section of transistorized FM radio receiver.
- 6. To calculate bandwidth & plot graph between output voltages & input freq. of ratio detector.
- 7. To plot the sensitivity characteristics curve of AM radio receiver.
- 8. Observe input and output waveforms of ratio detector.
- 9. IF alignment in AM radio receiver.
- 10. To observe symptoms, do logical analysis and rectify the fault in AM radio receiver.
- 11. To observe symptoms, do logical analysis and rectify the fault in FM radio receivers.

#### List of Assignments:

- 1. List antenna specifications :Antenna gain, effective radiated power, Directivity for Yagi-Uda antenna, Dish antenna and Loop antenna
- 2. State Frequency Band allotted to AM radio Broad casting station. List AM program and allotted frequency band.
- 3. State Frequency Band allotted to FM radio Broad casting station. List FM program and allotted frequency band.

# List of Equipments:

- 1. CRO, Signal generator, DMM.
- 2. Transmission line trainer kit, Antenna parameter trainer kit, AM radio receiver, FM radio receiver.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Transmission plays an important role for processing of signals. The signals are transmitted in different ways i.e. wire communication, wireless communication and wavelength communication.

This subject deals with the concept of the TV signal transmission for analog and digital TV system depending on the techniques for processing the signal is being transmitted from the transmitter, CVS & CCVS.

The topic CVS signals useful to understand the basic concept of TV signal generation & transmission.

Thus student will learn different requirement of signal for TV transmission. For learning this subject student should know the concept of analog & digital signals as well as electromagnetic spectrum.

Thus students will be aware the subject of TV Receiver in further Semester.

#### **General Objectives.**

Students will able to:

- Understand the basic concepts of TV Transmitter.
- Analyze the details of CVS & CCVS signals.
- Study the details of color burst signals.
- Visualize the concept of color theory.
- Understand function of B/W & color TV transmitter for PAL system.
- Understand the transmission of digital TV signal.

# **Learning Structure:**

| Applications | Application in Television<br>at studios before Transmis                                                                                                                         | Broadcastin<br>ssion.                                 | ng stations                                               | , Prograr                              | n Record                               | ing and Mixing                                                     |

#### **Practical:**

#### **Intellectual Skills:**

- Select measuring instruments on the basis of range, least count, precision and accuracy required for measurement.
- Record and analyze the observations.
- Interpret the results from observations and calculations.

#### Motor Skills:

- Proper handling of instruments.
- Measuring voltages and current at different stages accurately.
- Observe the phenomenon and to list the observations in proper tabular form.
- Follow proper procedure while performing the experiment.
- Observe, Draw and Analyze the waveforms at different stages.

# List of Experiments:

(For class size 60, batch size 20 experiments shall be conducted in cyclic order with group of 4 to 5 students.)

- 1. To observe, draw and analyze the output CVS waveform of pattern generator for monochrome bar pattern.
- 2. To observe, draw and analyze the output CVS waveform of pattern generator for monochrome Chessboard pattern.
- 3. To observe, draw and analyze the output CVS waveform of pattern generator for Colour bar pattern.
- 4. To observe, draw and analyze the output CVS waveform of pattern generator for Colour cross edge and colour dot patterns. (Horizontal and Vertical Sync pulses to be analyzed.)
- 5. To observe and analyze the video camera output signal on CRO.

- 6. To perform video recording and transmit the signal through transmission link and observe the same on TV receiver.
- 7. Visit to Doordarshan Kendra to understand the concept of C.T.V. transmission. Write a report of it.
  - Students should observe how synchronizing pulses are inserted.
  - Students should observe the switching of different cameras at studio.
  - Students should understand the concept of relay or retransmission of same programme.
  - Students should observe and understand the mixing of audio and video signals before transmission.(Function of Combining Network)

# List of Assignments:

- 1) A) Persistence of vision and its use for image continuity.
  - B) Explanation of gross structure of TV
  - C) Horizontal and vertical resolution and their use in calculation of No. of lines and video bandwidth.
  - D) Total bandwidth of channel and its distribution in VSB.
- 2) A) Representation of composite video signal for one or two horizontal line for a given pattern of frame.
  - Concept of composite video signal for horizontal lines and explanation & functioning of each part of that.
  - Vertical blanking details their requirements and need for serration and equalizing pulses.
- 3) A) Camera functioning and working.
  - B) Different types of camera tubes and their working.
- 4) A) Terms related to Monochrome and colour T.V. and their explanation. E.g. Brightness, luminance, Hue, contrast etc.
  - B) Mixing of colours, Grass man's law
  - C) Compatibility and its factors for Monochrome and colour TV.
- 5) A) Colour difference signals and their requirement.
  - B) Positive and negative modulation.
  - C) Elimination of (G-Y) signal.
  - D) Frequency interleaving and placing of colour sub-carrier signal in bandwidth.
- 6) A) Over-modulation of colour signals and how to over come from that.
  - B) Factors influencing choice of colour sub-carrier signal.
  - C) QAM for PAL system.
  - D) Phasor diagrams of weighted and unweighted colour signals.
- 7) A) Block diagram level study of monochrome T.V. Transmissions.
  - B) PAL V switching and its purpose.
- 8) A) Picture and sound transmission as AM & FM respectively Justify.
  - B) PAL Encoder block diagram and its working.
- 9) A) Study the concept of digital TV transmission.B) Study the concept of HDTV transmission.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Modern age technology has developed on high density and high speed electronics circuits. Integrated circuits are basis of these high density circuits enabled to reduce size, weight and cost of equipments. They have intrinsic features such as low power consumption, low noise and ease of design.

Today the growth of any industry depends upon electronics to great extent. Contents of this subject are the basic building blocks of different analog circuits.

Basic operating and designing principle of such a large collection of circuits establishes a foundation for understanding new development in the electronics field, instrumentation and power control. This subject acquaints student with general analog principles and design methodologies using integrated circuit for system design.

Prerequisites various devices and circuits studied in elements of electronics and electronic devices and circuits. Prospects- LSI, MSI, VLSI.

# **General Objectives:**

Students will be able to:

- Understand working principle of Op-Amp and IC555
- Develop electronics circuits using timer IC555 and Op-Amp

• Analyze the response of frequency selective circuits such as PLL with respect to the incoming signal.

# **Learning Structure:**

# **Application:**

# **Contents: Theory**

|   | Explain different types of oscillators                                                                                                              |    |     |
|   | > Develop multivibrators and oscillators for given values.                                                                                          |    |     |
| 6 | Contents:                                                                                                                                           | 08 | 10  |
| 0 | • Concept of oscillators,                                                                                                                           |    | 10  |
|   | • Types of oscillators: Phase shift oscillators, Wien bridge oscillators using IC-741                                                               |    |     |
|   | • Types of Multivibrators: Monostable, Astable, Bistable using IC-555 and IC-741. Schmitt trigger, voltage controlled oscillator (VCO) using IC 555 |    |     |
|   | Total                                                                                                                                               | 64 | 100 |

# Practical:

## **Intellectual Skills:**

- 1. Interpret the waveforms.
- 2. Find faults in circuits.

#### Motor Skill:

1. Testing and Measurement.

# **List of Practicals:**

| Sr. No. | Title of the Experiment                                                                 |
|---------|-----------------------------------------------------------------------------------------|
| 01      | Determine the op-amp parameters:                                                        |
|         | • Input Offset Voltage (V <sub>io</sub> )                                               |
| 01      | • Output Offset Voltage (V <sub>00</sub> )                                              |
|         | Common mode rejection ratio (CMRR)                                                      |
| 02      | Determine the gain of Inverting and Non-inverting amplifier using op-amp and            |
| 02      | compare it with theoretical gain.                                                       |
| 03      | Verify the operation of Adder and Subtractor circuit using op-amp IC 741.               |
|         | Verify the working of active integrator and differentiator circuits using op-amp IC 741 |
|         | for following inputs:                                                                   |
| 04      | • Sine waveform                                                                         |
|         | • Square waveform                                                                       |
|         | Rectangular waveform                                                                    |
| 05      | Assemble V to I converter and I to V converter using IC 741 and measure the             |
| 03      | respective output.                                                                      |
|         | Verify the working of following comparator circuits using op-amp IC 741 and draw the    |
| 06      | input-output waveforms                                                                  |
| 00      | • Zero crossing detector                                                                |
|         | Active peak detector                                                                    |
| 07      | Assemble first order low pass Butterworth filter using op-amp and plot the frequency    |
| 07      | response and determine its cutoff frequency.                                            |
| 08      | Assemble Astable multivibrator circuit using IC 741. Plot the output waveform and       |
| 00      | determine the frequency of oscillations and duty cycle.                                 |
| 09      | Assemble Monostable multivibrator circuit using IC 555. Plot the output waveform        |
| 07      | and determine the on-time.                                                              |
| 10      | Assemble Schmitt trigger circuit using IC 555. Plot the output waveform and             |

|    | determine UTP and LTP                                                             |
|----|-----------------------------------------------------------------------------------|
| 11 | Assemble Instrumentation amplifier circuit using IC 324 and determine the overall |
|    | gain.                                                                             |
| 12 | Verify the operation of frequency Multiplier using PLL IC 565 and determine the   |
|    | output frequency.                                                                 |

Subject Code : 17043

#### **Teaching and Examination Scheme**:

| Teaching Scheme |    | Examination Scheme |              |    |    |    |     |       |
|-----------------|----|--------------------|--------------|----|----|----|-----|-------|
| TH              | TU | PR                 | PAPER<br>HRS | TH | PR | OR | TW  | TOTAL |
| 01              |    | 02                 |              |    |    |    | 25@ | 25    |

## **Rationale:**

Today's most of the electronically operated devices, integrated circuits, controllers, equipments, gadgets are run by specific drivers/software. To understand design, develop and write drivers programming knowledge is required. To run the devices software has to be user friendly. New approach is to use graphical user interface. Graphical user interface can be implemented using visual software's.

Traditionally visual basic is the most popular, versatile, suitable, simple and commonly used visual programming language to write efficient, compact and portable interfaces, drivers/ software's.

The subject will enable the students to inculcate visual programming concepts and methodology used to write, debug, compile and execute simple visual basic programs using different powerful data types, built in visual controls and integrated visual basic environment (IDE) provided by Microsoft visual studio. Students will be exposed to event driven programming and bottom up approached used in objects oriented programming.

Students will understand how a complex interface can be easily implemented in visual basic with almost no programming expertise.

This course will lay the basic foundation of visual programming which will enable students to develop simple to complex programmable systems interfaces in the real world of work

#### **General Objectives**

Students will able to.

- 1. Learn visual programming development environment, concepts and methodology.
- 2. Use essential components (visual tools ) of Visual software's
- 3. Develop the skill of visual basic programming to build custom standalone applications
- 4. Develop applications with Multiple documents interface (MDI) using common dialog, menus and graphics
- 5. Use ADO for database connectivity with different databases.
- 6. Create simple reports using data report, Seagate crystal reports and integrating it with visual basic
- 7. Develop applications using class modules

|----------------------------------------------------------------------------------------------|-----|
| Topic 1] Introduction to Visual Environment                                                  |     |
| Specific Objectives:                                                                         |     |
| Familiar with IDE of Visual basic                                                            |     |
| Use concepts of object based language                                                        |     |
| Use basic elements of visual interface                                                       |     |
| Use properties, events and methods at design time and runtime                                | 2   |
| Create objects, place them on forms                                                          | 12  |
| Contents:                                                                                    |     |
| 1.1 Concepts of visual programming, object, features, properties, methods, events.           |     |
| 1.2 Environment of VB – Menu bar, toolbar, project explorer, toolbox, properties             |     |
| window, form designer, form layout, immediate window.                                        |     |
| 1.3 Concept of project, elements of projects, form, their properties, methods and events.    |     |
| Topic 2] Introduction to Visual Basic                                                        |     |
| Specific Objectives:                                                                         |     |
| Use different data types                                                                     |     |
| > Use powerful features of arrays and collections                                            |     |
| > Write procedures and functions                                                             |     |
| > Call procedures and functions                                                              |     |
| Differentiate between procedure and functions                                                |     |
| <ul> <li>Use library functions for math and string operations</li> <li>0</li> </ul>          | 2   |
| <ul> <li>Use Inputbox and Msgbox functions</li> </ul>                                        | _   |
| Contents:                                                                                    |     |
| 2.1 Data types, variables, constants, arrays, collections                                    |     |
| 2.2 procedures. Arguments, function, return values, control flow statements, loop            |     |
| statements Nested control structures exit statement                                          |     |
| 2.3 Math operators & formulas, logical operators, string functions, special functions        |     |
| available in VB like Input Box (). Message Box (). Format ().                                |     |
| Tonic 3] Controls and Events                                                                 |     |
| Snecific Objectives:                                                                         |     |
| <ul> <li>Vise basic controls</li> </ul>                                                      |     |
| <ul> <li>Select appropriate controls for given data</li> </ul>                               |     |
| <ul> <li>Set properties of different basic controls</li> </ul>                               |     |
| <ul> <li>Call methods and events of basic controls</li> </ul>                                |     |
| <ul> <li>Demonstrate the use of each control with simple examples</li> </ul>                 | 12  |
| Contents:                                                                                    | -   |
| 3.1 Basic controls: Text box list Box Combo Box Scroll Bar frame Option button               |     |
| checkbox command button OLE controls                                                         |     |
| 3.2 File Drive directory Picture box Image and timer controls Designing a form using         |     |
| controls concepts of event & properties changing properties (runtime & design                |     |
| time) Important events of each control & creating applications using controls                |     |
| Tonic 4] Advance Controls & Events                                                           |     |
| Snecific Objectives:                                                                         |     |
| <ul> <li>Add extrinsic controls in an application</li> </ul>                                 |     |
| <ul> <li>Itse common dialog how control and its properties such open save as font</li> </ul> |     |
| color nrint and heln                                                                         | 3   |
| <ul> <li>Ise rich text has to design simple ms-word like application</li> </ul>              |     |
| <ul> <li>Use and create evolorer like utilities using tree view and list controls</li> </ul> |     |
| <ul> <li>Familiar with windows common controls</li> </ul>                                    |     |
| Contents:                                                                                    |     |
| 4.1 Common Dialog Box controls, The Tree view and List, View controls, the rich         |    |
|-----------------------------------------------------------------------------------------|----|
| textbox controls                                                                        |    |
| 4.2 Windows common controls – status Bar, Tab control, image list control, Important    |    |
| properties, changing properties at design or run time, event handling.                  |    |
| Topic 5] Module, Class Module, Mdi, Menu Graphics                                       |    |
| Specific Objectives:                                                                    |    |
| Write class modules                                                                     |    |
| Define functions and procedures in class module                                         |    |
| Access functions and procedures from class module                                       |    |
| Use multiple document interface                                                         |    |
| Design menu based applications such as notepad editor                                   |    |
| Work with graphic functions and methods                                                 | 03 |
| Contents:                                                                               |    |
| 5.1 Concept of module, class module, using class module to define functions,            |    |
| procedures, variables and accessing them using objects                                  |    |
| 5.2 MDI- MDI form and child form, Creation and use in                                   |    |
| 5.3 Menu: Creating own menu using menu editor, popup menu.                              |    |
| 5.3 Graphics: Basic controls – Line & shape control, line method, circle method, Pset   |    |
| method, RGB () Functions, Paint picture () method, Load picture () function.            |    |
| Topic 6] Database and Report                                                            |    |
| Specific Objectives:                                                                    |    |
| Create database                                                                         |    |
| Use ADO and its properties, methods and events                                          |    |
| Select appropriate concepts such as back-end and front-end                              |    |
| Make database connectivity with different databases                                     |    |
| Generate report using Data Report and Crystal Report                                    |    |
| Contents:                                                                               | 04 |
| 6.1 Concept of database, Record, Record set, Data control & its important properties    | 04 |
| 6.2 validating data, entering data, visual data manager.                                |    |
| 6.3 Programming with ADO ( Active data objects ), using ADO Objects at design time-     |    |
| connection, command, record set, parameter, Creating & closing a connection;            |    |
| executing a command,                                                                    |    |
| 6.4 Using ADO Objects at run time, attaching visual controls to record set at run time, |    |
| Using delete, save, search, update exit, new, add, methods.                             |    |
| 6.5 Report generation using data report and crystal report                              |    |
| Total                                                                                   | 16 |

### **Rationale:**

Most of the diploma holders join industries. Due to globalization and competition in the industrial and service sectors the selection for the job is based on campus interviews or competitive tests.

While selecting candidates a normal practice adopted is to see general confidence, ability to communicate and attitude, in addition to basic technological concepts.

The purpose of introducing professional practices is to provide opportunity to students to undergo activities which will enable them to develop confidence. Industrial visits, expert lectures, seminars on technical topics and group discussion are planned in a semester so that there will be increased participation of students in learning process.

# **Objectives:**

To develop the following skills:

# Intellectual skills:

- 1) Analyze information from different sources.
- 2) Prepare reports.

# Motor skills:

- 1) Present given topic in a seminar.
- 2) Interact with peers to share thoughts.
- 3) Prepare a report on industrial visit, expert lecture.

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

# INDUSTRIAL TRAINING (OPTIONAL)

# Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

THEORY AND PRACTICAL PERIODS OF 60 MINUTES EACH. Total Marks : 950 @ - Internal Assessment, # - External Assessment, No Theory Examination, - Common to all branches, $\beta$ - Common to ME / PG / PT/ MH / MI/FG Abbreviations: TH-Theory, TU- Tutorial, PR-Practical, OR-Oral, TW- Term Work, SW- Sessional Work.

\*\* Industrial Training (Optional) - Student can undergo Industrial Training of four weeks after fourth semester examination during summer vacation.

Assessment will be done in Fifth semester under Professional Practices-III. They will be exempted from activities of Professional Practices-III of 5<sup>th</sup> Semester.

- Conduct two class tests each of 25 marks for each theory subject. Sum of the total test marks of all subjects is to be converted out of 50 marks as sessional work (SW).
- > Progressive evaluation is to be done by subject teacher as per the prevailing curriculum implementation and assessment norms.
- Code number for TH, PR, OR, TW are to be given as suffix 1, 4, 8, 9 respectively to the subject code.
- > For CAD software subject MSBTE decide the contents of the practical every year.

MSBTE - Final Copy Dt. 30/08/2013

**Course Name : All Branches of Diploma in Engineering & Technology** 

# Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG/AU

Semester : Fourth

Subject Title : Environmental Studies

Subject Code : 17401

### **#\* - Online Theory Examination**

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

# Practical:

Skills to be developed:

### **Intellectual Skills**:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

### **Motor Skills:**

- 1. Presentation Skills
- 2. Use of multi media

### **List of Projects:**

**Note:** Any one project of the following:

1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain

- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds
- 4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

### **Rationale:**

Diploma technician often comes across various types of basic manufacturing processes. He / she is required to select, operate and control the appropriate processes for specific applications. He / she is also required to know about various cutting tools, latest improvements in manufacturing processes. This is a core technology subject. The diploma technician should know how the raw material gets processed through various processes and ultimately results into finished goods.

Hence it is essential that, he has understanding of basic manufacturing processes, machines, tools and equipments. With sound knowledge of this subject, the diploma technician will be able to handle and control practical situations more effectively and confidently.

### **Objectives:**

The student will be able to:

- 1) Use the basic machine tools like lathe and drilling.
- 2) Produce and inspect the job as per specified dimensions.
- 3) Select the specific manufacturing processes for the desired output.
- 4) Adopt safety practices while working on various machines.
- 5) Explain the different types of plastic moulding processes.
- 6) Select the basic manufacturing process for different components to be machined.

# **Practical:**

Skills to be developed:

# Intellectual skills:

- 1) Identify basic manufacturing processes like forging, rolling and extrusion, for required component.
- 2) Specify need of pattern allowances.
- 3) Decide process parameters for different operations.
- 4) Decide tools required for a manufacturing process.
- 5) Identify a joining method for fabrication.

### **Motor Skills:**

1) Operate lathe, drilling machine.

- 2) Set the tool and select the cutting parameters for machining operations.
- 3) Set the tools, job and decide cutting parameters.
- 4) Inspect various dimensions of jobs by using measuring instruments.
- 5) Make simple wooden / thermocole pattern.

### List of Practical:

- 1) One turning job on lathe containing the operations like plain turning, step turning, taper turning, grooving, knurling and chamfering.
- 2) One job using Spot welding machine. (Min. 4 spots on 0.5-1mm thick metal strip.)
- 3) One simple job on TIG / MIG welding setup or visit to TIG / MIG welding shop.
- 4) Moulding practice for any one pattern.
- 5) Industrial visit to observe plastic processing shop and report on the visit.
- 6) One composite job containing the operations like lathe with axial & across drilling (like Nut- Bolt assembly or any other equivalent job).
- 7) Demonstration of eccentric turning using four jaw chuck.

### Notes:

- 1] The workshop instructors should prepare specimen job in each shop as demonstration practice before the student (as per the drawing given by subject teacher/ workshop superintendent).
- 2] Theory behind practical is to be covered by the concerned subject teacher/ workshop superintendent.
- 3] Workshop diary should be maintained by each student duly signed by respective shop instructors.
- 4] Assignments are to be assessed by the concerned subject teacher/ workshop superintendent.

# **Guidelines for conducting Practical Examination for MANUFACTURING PROCESSES**

- 1. The job drawing must be jointly decided by the External and Internal examiner prior to one day in advance from the commencement of practical examination. Every student should be supplied the copy of job drawing before examination.
- 2. Time for practical examination should be **THREE HOURS.**
- 3. Practical examination of the students shall consists of Turning job containing different operations like Facing, straight Turning, Taper turning, Chamfering, Knurling, Threading, Grooving. (Minimum 5 operations) Students will perform the job as per the drawing provided to them.
- 4. Raw material size Bar dia. 40 to 50 mm, length 80 to 100 mm.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Knowledge of fluid properties, fluid flow & fluid machinery is essential in all fields of engineering. Hydraulic machines have important role in water supply, irrigation, power generation and also in most of the engineering segments. This subject requires knowledge of basic engineering sciences, applied mechanics, mathematics etc. The fundamentals of this subject are essential for the subject "Industrial Fluid Power" in sixth semester.

General Objectives: The student will be able to

- 1) Define various properties of fluids
- 2) Measure pressure, velocity and flow rate using various instruments.
- 3) State continuity equation, Bernoulli's equation and its applications.
- 4) Estimate various losses in flow through pipes.
- 5) Explain concept of impact of jet on various types of vanes.
- 6) Draw the construction, working of hydraulic pumps and turbines.
- 7) Evaluate performance of turbines and pumps.

# Theory:

| Topics and Contents                                                                             | Hours | Marks |
|-------------------------------------------------------------------------------------------------|-------|-------|
| 1. Properties of fluid and Fluid Pressure                                                       |       |       |
| Specific Objectives:                                                                            |       |       |
| Define fluid properties.                                                                        |       |       |
| Differentiate between fluid pressure intensity and pressure head.                               |       |       |
| Solve numerical related to properties of fluid, fluid pressure and                              |       |       |
| manometers.                                                                                     |       |       |
| Contents:                                                                                       |       |       |
| 1.1 Properties of Fluid 06 Marks                                                                |       |       |
| Density, Specific gravity, Specific volume, Specific Weight, Dynamic                            |       |       |

### Practical: Skills to be developed: Intellectual Skills:

- 1. Select appropriate flow and pressure measuring devices for a given situation.
- 2. Analyze the performance of pumps and turbines.

#### **Motor Skills:**

- 1. Use flow and pressure measuring devices.
- 2. Operate pumps and turbines.

### **List of Practicals:**

- 1. Measure water pressure by using Bourdon's pressure gauge and U-tube Manometer. Also measure discharge of water by using measuring tank and stop watch.
- 2. Calibrate Bourdon's pressure gauge with the help of Dead weight pressure gauge.
- 3. Verify Bernoulli's theorem.
- 4. Determine Coefficient of Discharge of Venturimeter.
- 5. Determine coefficient of Discharge, Coefficient of Contraction and Coefficient of Velocity of Sharp edged circular orifice.
- 6. Determine Darcy's friction factor 'f' in pipes of three different diameters for four different discharges.
- 7. Determine minor frictional losses in pipe fittings.
- 8. Determine overall efficiency of Pelton wheel by using Pelton wheel test rig.
- 9. Determine overall efficiency of Centrifugal Pump & plot its operating characteristics by using Centrifugal pump test rig.
- 10. Determine overall efficiency of Reciprocating pump by using Reciprocating Pump test rig.

### Assignments

1. Information collection of Centrifugal, reciprocating, multistage pumps and submersible pumps from local market and from internet. Comparison of various models manufactured by different manufacturers. [The market survey is to be completed in a group of (max.) three to four students and the report of the same is to be included as part of term work.]

### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

### **Rationale:**

To teach students to understand facts concepts principles and procedures of gas and arc welding, brazing, soldering.

# **Objectives:**

### The student will be able to:

- 1. Make student familiar with gas welding process.
- 2. Understand phenomenon of manual metal arc welding.
- 3. Describe and use the welding arc & metal transfer mechanism.
- 4. Identify weld defects.
- 5. Use the knowledge of joint design and weld metallurgy
- 6. Compare various metal joining processes welding, brazing & soldering.

### **Learning Structure:**

# **Details:** Contents

| Chapter | Description                                                                                                                            | Marks      | Hours |

# **Practicals:**

# Skill to be developed Intellectual Skill:

- 1. Identify the joining methods of welding
- 2. Understand welding of different materials
- 3. Specify different arc welding parameters.

# Moral Skill:

- 1. Edge preparation for making the welding joint
- 2. Cleaning of edges.
- 3. Use welding machine & equipment.
- 4. Set the tool, job & decide parameter of machines.
- 5. Inspect the dimensions of the job using measuring instruments
- 6. Evaluation of weld quality

# Learning Resources:

**Course Name : Diploma in Fabrication Technology & Erection Engineering** 

Course Code: FE/FGSemester: FourthSubject Title: Fabrication Process

Subject Code : 17456

### **Teaching and Examination Scheme:**

| Teaching Scheme |    |    |              |     | Examinati | on Scheme |     |       |
|-----------------|----|----|--------------|-----|-----------|-----------|-----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH  | PR        | OR        | TW  | TOTAL |
| 03              |    | 02 | 03           | 100 | 50#       |           | 25@ | 175   |

### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

### **Rationale:**

This subject will help the students to know the basic requirements of fabrication & the orderly sequence in which a component is prepared for fabrication.

# **Objectives:**

The student will be able to:

- Know basic marking / measuring processes. Identify & select various marking / measuring tools in sheet metal shops.
- To know the methods used for straightening & stiffening in sheet metal works.
- To know recent trends of materials in fabrication.
- To know the layout employed for fabrication processes.
- To know importance of surface cleaning prior to coating.

### **Learning Structure:**

# **THEORY:**

| Topic and Contents                                                     | Marks | Hours |
|------------------------------------------------------------------------|-------|-------|
| 1. Measurement                                                         |       |       |
| Introduction 04 Marks                                                  |       |       |
| 1. Definition and meaning of :                                         |       |       |
| Quantity, measurement, metrology, measure                              |       |       |

| 2. Line standard                                                       |       |       |
| 3. End standard                                                        |       |       |
| 4. Angular standard                                                    |       |       |
| Marking process 16Marks                                                |       |       |
| 1. Tools used in marking                                               |       |       |
| 2. Marking methods for large size plates                               |       |       |
| 3. Use of chalk line for marking long straight line                    |       |       |
| 4. Shop method of drawing an ellipse                                   |       |       |
| 5. Plotting ellipse using trammels                                     |       |       |
| 6. Shop method of drawing a circle                                     |       |       |
| 7. Method of marking out bolt holes for flanges                        |       |       |
| 8. Marking out a bracket from a datum surface                          |       |       |
| 9. Procedure for marking out instrument panel                          |       |       |
| 10. Marking of holes in angle sections, channel sections, T- sections, |       |       |
| columns and beams                                                      | 48    | 28    |
| Instruments for datum measurements 04 Marks                            |       |       |
| 1. Vertical datum- plumb line                                          |       |       |
| 2. Horizontal datum- spirit level                                      |       |       |
| 3. Alignment testing- use of tensioned wire, surveyor's level          |       |       |
| Geometric shape 08 Marks                                               |       |       |
| 1. Straightness testing- straight edge method, spirit level method     |       |       |
| 2. Flatness testing- comparison with flat circles, use of spirit level |       |       |
| 3. Squareness testing- engineer's square, block square                 |       |       |
| 4. Roundness measurement – Diametral, circumferential confining        |       |       |
| gauge, rotating on centres, assessment using a V-block, roundness      |       |       |
| measuring machine                                                      |       |       |
| Templates 12 Marks                                                     |       |       |
| 1. The need of templates                                               |       |       |
| 2. Materials used for templates                                        |       |       |
| 3. Information given on templates                                      |       |       |
| 4. Use of templates                                                    |       |       |
| <ul> <li>Templates for setting out sheet metal fabrications</li> </ul> |       |       |
| Templates for hopper plates                                            |       |       |
| Box templates                                                          |       |       |
| Steel templates (ordinary and bushed)                                  |       |       |
| 5. Templates as means of checking                                      |       |       |
| 6. Templates as a means of marking hole positions                      |       |       |

| 7. Templates as means of to provide an economical arrangement of |     |     |

|                                                                  | 100 | 10  |
| I Otal                                                           | 100 | 40  |

### Practical:

# Skill to be developed;

### Intellectual skills

- 1. Ability to read job drawings.
- 2. Ability to identify & select proper material & tools for marking / measuring.

# Motor skills

- 1. Ability to set work piece for measurement on measuring instruments / devices.
- 2. Ability to inspect the job for confirming desired dimensions and shape.
- 3. Ability to recognize errors from mistakes and take remedial actions.

### **Practicals**:

### 1. Demonstration and use of :

- Vernier calliper,
- Micrometer screw gauge,
- Vernier height gauge,
- Vernier depth gauge,
- Feeler gauge, radius gauge & screw pitch gauge
- Slip gauges,
- Universal Bevel Protractor,
- Sine bar
- Angle gauges,

# 2. Study of Engineer's rule,

3. Study of Steel rule and tape (Layout preparation)

**Course Name : Diploma in Fabrication Technology & Erection Engineering** 

Course Code: FE/FGSemester: FourthSubject Title: Process Equipment

Subject Code : 17457

### **Teaching and Examination Scheme**

| Teaching Scheme |    |    |              | Examinati | on Scheme |    |     |       |
|-----------------|----|----|--------------|-----------|-----------|----|-----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH        | PR        | OR | TW  | TOTAL |
| 04              |    | 02 | 03           | 100       |           |    | 25@ | 125   |

# **Rationale:**

It is intended that the students understand facts, concepts regarding construction and working of process equipment used in the fabrication industry.

Objectives: The students will be able to-

- 1. Learn pressure vessel terminology.
- 2. Study design loads on process equipments.
- 3. Find stresses / thickness of vessels & dished ends.
- 4. Study of supports.
- 5. Design the process equipment.
- 6. Study & decide the materials & welding processes used in pressure vessel construction.

# Learning Structure:

#### **Theory:**

| TOTAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 100   | 64   |

### Assignments:

Eight assignments based on above theory content. Details of the assignments be written

### **Implementation Strategies:**

The subject matter will be taught as per the teaching scheme for Theory and practical. The subject teacher will prepare and provide learning material/handout for supplementing/ complementing classroom instructions.

# Course Name : Diploma in Fabrication Technology & Erection Engineering

Course Code : FE/FG Semester : Fourth Subject Title : Professional Practices-II Subject Code : **17048** 

# **Teaching and Examination Scheme:**

| Teac | ching Scł | neme |              |    | Examinati | on Scheme |     |       |
|------|-----------|------|--------------|----|-----------|-----------|-----|-------|
| TH   | TU        | PR   | PAPER<br>HRS | TH | PR        | OR        | TW  | TOTAL |
|      |           | 03   |              |    |           |           | 50@ | 50    |

### **Rationale:**

The purpose of introducing Professional practices is to fulfill the need of students to stand in today's global market with knowledge and confidence. This can be achieved by arranging industrial visits, expert lectures attitude to present them-selves, get alternative solutions and validation of the selected alternatives, socially relevant activities, and modular courses. Professional Practices is helpful in broadening technology base of students beyond curriculum. Model making exercises allow students to think more creatively and innovatively and inculcating habit of working with their own hands. Modular courses are introduced with a view of learning and acquiring higher technology skills through industry experts and consultants from the respective fields.

# **Objectives:**

The student will be able to:

- 1) Acquire information from different sources.
- 2) Prepare notes for given topics
- 3) Present seminar using power projection system.
- 4) Interact with peers to share thoughts.
- 5) Work in a team and develop team spirit.

# **Intellectual Skill:**

Student will be able to-

- 1) Search information from various resources.
- 2) Prepare notes on selected topics.
- 3) Participate in group discussions.

#### **Motor Skills:**

- 1) Observe industrial practices during visits.
- 2) Prepare slides / charts for presentation in seminar.
- 3) Develop a model

### **Learning Structure:**

#### **Content:**

| Topic & Content                                                                               | Hours |
|-----------------------------------------------------------------------------------------------|-------|
| 1. Information Search:-                                                                       |       |
| Information search be made through manufacturers catalogue, Hand books, magazines             |       |
| journal and websites, and submit a report on any Two Topics in a group of 3 to 4              |       |
| students, report size shall not be more than 10 pages.                                        |       |
| Following topics are suggested, any other equivalent topics may be selected.                  |       |
| 1. Present scenario of electric power generation in Maharashtra state /India.                 |       |
| 2. Composite materials – Types, properties & application                                      |       |
| 3. Material handling equipments commonly used in industries.                                  |       |
| 4. Advances in Automobile engines.                                                            |       |
| 5. Hydraulic steering systems of Automobile.                                                  |       |
| 6. Mechanisms used to produce straight-line motion.                                           |       |
| 7. Mechanisms used for generating intermittent motion.                                        |       |
| 8. Advanced surface coating techniques like chemical vapor deposition, ion                    | 10    |
| implantation, physical vapor deposition.                                                      |       |
| 9. Types of cutting tools- specification, materials and applications.                         |       |
| 10. Booking of E-Tickets for Railways/Buses/Air travel.                                       |       |
| 11. Profiles of 2 multinational companies.                                                    |       |
| 12. Engine lubricants, coolants and additives                                                 |       |
| 13. Power steering, power windows                                                             |       |
| 14. ABS(anti lock braking systems)                                                            |       |
| 15. MPFI(multi point fuel injection) system                                                   |       |
| 16. Role of MIDC, MSSIDC, DIC, Financial institutions in development of                       |       |
| industrial sector.                                                                            |       |
| 17. Solar energy systems - Components and their functions, applications                       |       |
| 18. Design data book - Study and use of types of data.                                        |       |
| 2. Lectures by professionals/Industry Experts-                                                |       |
| Two lectures of two hour duration be arranged on any two topics suggested below or            |       |
| any other suitable topics to acquire practical information beyond scope of                    |       |
| curriculum.                                                                                   |       |
| Students shall prepare a brief report of each lecture as a part of their term work.           |       |
| 1. Components of project Report.                                                              |       |
| 2. Various loan schemes of banks, LIC and other agencies for education and other              |       |
| purposes.                                                                                     |       |
| 3. Use of plastics & rubbers in Automobiles industries.                                       |       |
| 4. Type of processes used to protect material surfaces from environmental effect.             | 06    |
| 5. Product file cycle.                                                                        | 06    |
| 6. Industrial application of mechatronics.                                                    |       |
| 7. Special features of CNC machines                                                           |       |
| 8. Gear manufacturing & gear teeth filmsning processes.                                       |       |
| 9. Geal boxes-industrial & Automobile applications.                                           |       |
| 10. super-miniming operation when industrial applications.                                    |       |
| 12 Features of modern boilers                                                                 |       |
| 13. Strainers and filters – Types functions and applications                                  |       |
| 14 Industrial drives-Types, components, comparison and applications                           |       |
| 15. Introduction to Apprenticeshin Training Scheme                                            |       |
| 3. Seminars:                                                                                  |       |
| One seminar be arranged on the subjects related to 4 <sup>th</sup> semester. Or topics beyond | 06    |
| curriculum.                                                                                   |       |

| Each student shall submit a report up to 10 pages and deliver the seminar.                 |    |
|--------------------------------------------------------------------------------------------|----|
| batch size - 2-3 students.                                                                 |    |
| Source of information - books, magazine, Journals, Website ,surveys,                       |    |
|                                                                                            |    |
| Topics suggested for guidance-                                                             |    |
| 1. Clutches - Types, Principles, working, & applications,                                  |    |
| 2. High pressure boilers.                                                                  |    |
| 3. Heat exchangers - Types, working applications.                                          |    |
| 4. Hydraulic turbines -Types, working & applications.                                      |    |
| 5. Hydraulic pumps - Types, working & applications.                                        |    |
| 6. Sensors -Types, principle & applications.                                               |    |
| 7. Super conductor technology - Types, principle & applications.                           |    |
| 8. Semi conductors- Types, materials & applications.                                       |    |
| 9. Industrial brakes- Types, construction, working & applications.                         |    |
| 4. Industrial visits                                                                       |    |
| Structured industrial visits be arranged and report of the same shall be submitted by each |    |
| student to form a part of the term work.                                                   |    |
| No of visits- At least one                                                                 |    |
| Scale of industry- medium scale unit, large scale unit.                                    |    |
| Group size- practical batch                                                                |    |
| Report-not exceeding 7 to 10 pages.                                                        |    |
| Purpose :                                                                                  |    |
| To study the profile of industry                                                           |    |
| > To see the advanced manufacturing processes & machinery.                                 |    |
| > To observe working of CNC machines, work centres, flexible manufacturing                 |    |
| systems                                                                                    |    |
| > To observe working in foundry, forging shop, press shop, heat treatment shop etc.        |    |
| ➢ To observe chip less manufacturing machines & processes.                                 |    |
| > To study process sheets, quality control charts & production drawings, metallurgical     |    |
| testing laboratory                                                                         | 08 |
| To observe Tool room, standards room etc.                                                  |    |
| Following types of industries may be visited in $\ell_{\rm constraints}$ detainstitute     |    |
| Following types of industries may be visited in & around the institute.                    |    |
| 2. Forging units                                                                           |    |
| 2. Forging units<br>3. Sheet metal processing unit                                         |    |
| A Machine/ Automobile component manufacturing unit                                         |    |
| 5 Exprication unit/ powder metallurgy component manufacturing unit                         |    |
| 6 Machine tool manufacturing unit                                                          |    |
| 7 Any processing industry like chemical textile sugar agriculture fertilizer               |    |
| industries.                                                                                |    |
| 8. Auto workshop / four wheeler garage.                                                    |    |
| 9. City water supply pumping station                                                       |    |
| 10. Hydro electric power plant.                                                            |    |
| 11. Wind mills, Solar Park                                                                 |    |

| 5. Socially Relevant Activities                                                                         |    |
|---------------------------------------------------------------------------------------------------------|----|
| Conduct any one activity through active participation of students and write the report.                 |    |
| Group of students- maximum 4                                                                            |    |
| Report- Not more than 6 nages                                                                           |    |
| List of suggested activities (activities may be thought in terms of campus improvement)                 |    |
| 1 Awaraness about carbon credit                                                                         | 06 |
| 2. Anticompution movement                                                                               | 00 |
| 2. Anticolluption movement                                                                              |    |
| 5. Awareness about cyber crimes.                                                                        |    |
| 4. Developing good citizens.                                                                            |    |
| 5. Management of E- WASTE                                                                               |    |
| 6. Recycling of waste materials.                                                                        |    |
| 7. Accident prevention & enforcement of safely rules.                                                   |    |
| 8. Awareness about pollution and pollution control.                                                     |    |
| 9. (Any other relevant activity may be performed)                                                       |    |
| 6. Mini Projects                                                                                        |    |
| Students, in a group of 4, shall perform any one activity listed below.                                 |    |
| 1. Model making out of card board paper, wood, thermocol, plastics, metal, clay                         |    |
| etc                                                                                                     |    |
| a) Any new idea/principle converted into model                                                          |    |
| b) Mechanisms                                                                                           |    |
| c) Ligg/fixtures                                                                                        |    |
| d) Meterial handling device. etc.                                                                       |    |
| u) Waterial halfulling device, etc.                                                                     |    |
| 2. Toy making with simple operating mechanisms                                                          |    |
| 3. Layout of workshop/department/college                                                                |    |
| 4. Experimental set up/testing of a parameter                                                           |    |
| 5. Display board indicating different type of machine components like bearing,                          |    |
| fasteners, couplings, pipe fitting, valves, cams & followers, exploded views of                         |    |
| assemblies, type of welding equipment, welding rods (drawings, photo graphs)                            |    |
| 6. Any relevant project which will make students to collect information & work                          |    |
| with their own hands.                                                                                   |    |
| 7. Students shall arrange exhibition of all mini projects in the class/hall and present                 |    |
| the task to the audience/ experts/examiners. The student shall submit a brief                           | 12 |
| report (Max, 5 pages) of the mini project.                                                              |    |
| OR                                                                                                      |    |
| Modular course:                                                                                         |    |
|                                                                                                         |    |

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

# INDUSTRIAL TRAINING (OPTIONAL)

# Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

# Practical:

Skills to be developed:

#### **Intellectual Skills**:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

#### **Motor Skills:**

- 1. Presentation Skills
- 2. Use of multi media

# **List of Projects:**

**Note:** Any one project of the following:

1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain

- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds
- 4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

#### **Rationale:**

Diploma technician often comes across various types of basic manufacturing processes. He / she is required to select, operate and control the appropriate processes for specific applications. He / she is also required to know about various cutting tools, latest improvements in manufacturing processes. This is a core technology subject. The diploma technician should know how the raw material gets processed through various processes and ultimately results into finished goods.

Hence it is essential that, he has understanding of basic manufacturing processes, machines, tools and equipments. With sound knowledge of this subject, the diploma technician will be able to handle and control practical situations more effectively and confidently.

#### **Objectives:**

The student will be able to:

- 1) Use the basic machine tools like lathe and drilling.
- 2) Produce and inspect the job as per specified dimensions.
- 3) Select the specific manufacturing processes for the desired output.
- 4) Adopt safety practices while working on various machines.
- 5) Explain the different types of plastic moulding processes.
- 6) Select the basic manufacturing process for different components to be machined.

| Content                                                                                                                                   |    |     |
| 4.1 Introduction & classification of welding processes -                                                                                  |    |     |
| Gas welding, carbon arc welding, shielded metal arc welding, TIG                                                                          |    |     |
| welding, MIG welding, plasma arc welding, resistance welding types-                                                                       |    |     |
| spot, seam projection. Electron beam welding, laser beam welding.                                                                         |    |     |
| welding defects. <b>10 Marks</b>                                                                                                          |    |     |
| 4.2 Introduction to soldering and brazing –                                                                                               |    |     |
| Process, fillers, heating methods & applications. 04 Marks                                                                                |    |     |
| 5. Machining Operations                                                                                                                   |    |     |
| Specific Objectives:                                                                                                                      |    |     |
| > To state the working principal of lathe and drilling machines.                                                                          |    |     |
| > To list out various operations performed on lathe and drilling                                                                          |    |     |
| machines                                                                                                                                  |    |     |
| Content                                                                                                                                   |    |     |
| 5.1 Lathe Machine: 12 Marks                                                                                                               |    |     |
| Introduction, classification and basic parts of center lathe & their                                                                      | 10 | 20  |
| functions, Lathe operations like facing, plain turning, taper turning, thread                                                             | 10 | 20  |
| cutting, chamfering, grooving, knurling. Cutting tool nomenclature & tool                                                                 |    |     |
| signature, cutting parameters.                                                                                                            |    |     |
| 5.2 Drilling Machine: 08 Marks                                                                                                            |    |     |
| Introduction, classification, basic parts of radial drilling machine and their                                                            |    |     |
| functions, twist drill nomenclature, drilling machine operations like                                                                     |    |     |
| drilling, reaming, boring, counter sinking, counter boring, spot facing.                                                                  |    |     |
| Cutting parameters.                                                                                                                       |    |     |
| 6. Plastic Moulding:                                                                                                                      |    |     |
| Specific Objectives:                                                                                                                      |    |     |
| To state different properties of plastics                                                                                                 |    |     |
| To explain various plastic mauling methods like Injection, blow,                                                                          |    |     |
| compression molding                                                                                                                       | 05 | 10  |
| Content                                                                                                                                   |    |     |
| Introduction, Properties of plastics, types of plastics, plastic moulding                                                                 |    |     |
| methods - compression moulding, injection moulding, blow moulding,                                                                        |    |     |
| extrusion, vacuum forming and calendaring.                                                                                                |    |     |
| Total                                                                                                                                     | 48 | 100 |

# **Practical:**

Skills to be developed:

# Intellectual skills:

- 1) Identify basic manufacturing processes like forging, rolling and extrusion, for required component.
- 2) Specify need of pattern allowances.
- 3) Decide process parameters for different operations.
- 4) Decide tools required for a manufacturing process.
- 5) Identify a joining method for fabrication.

#### **Motor Skills:**

1) Operate lathe, drilling machine.

- 2) Set the tool and select the cutting parameters for machining operations.
- 3) Set the tools, job and decide cutting parameters.
- 4) Inspect various dimensions of jobs by using measuring instruments.
- 5) Make simple wooden / thermocole pattern.

# List of Practical:

- 1) One turning job on lathe containing the operations like plain turning, step turning, taper turning, grooving, knurling and chamfering.
- 2) One job using Spot welding machine. (Min. 4 spots on 0.5-1mm thick metal strip.)
- 3) One simple job on TIG / MIG welding setup or visit to TIG / MIG welding shop.
- 4) Moulding practice for any one pattern.
- 5) Industrial visit to observe plastic processing shop and report on the visit.
- 6) One composite job containing the operations like lathe with axial & across drilling (like Nut- Bolt assembly or any other equivalent job).
- 7) Demonstration of eccentric turning using four jaw chuck.

#### Notes:

- 1] The workshop instructors should prepare specimen job in each shop as demonstration practice before the student (as per the drawing given by subject teacher/ workshop superintendent).
- 2] Theory behind practical is to be covered by the concerned subject teacher/ workshop superintendent.
- 3] Workshop diary should be maintained by each student duly signed by respective shop instructors.
- 4] Assignments are to be assessed by the concerned subject teacher/ workshop superintendent.

# **Guidelines for conducting Practical Examination for MANUFACTURING PROCESSES**

- 1. The job drawing must be jointly decided by the External and Internal examiner prior to one day in advance from the commencement of practical examination. Every student should be supplied the copy of job drawing before examination.
- 2. Time for practical examination should be **THREE HOURS.**
- 3. Practical examination of the students shall consists of Turning job containing different operations like Facing, straight Turning, Taper turning, Chamfering, Knurling, Threading, Grooving. (Minimum 5 operations) Students will perform the job as per the drawing provided to them.
- 4. Raw material size Bar dia. 40 to 50 mm, length 80 to 100 mm.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Knowledge of fluid properties, fluid flow & fluid machinery is essential in all fields of engineering. Hydraulic machines have important role in water supply, irrigation, power generation and also in most of the engineering segments. This subject requires knowledge of basic engineering sciences, applied mechanics, mathematics etc. The fundamentals of this subject are essential for the subject "Industrial Fluid Power" in sixth semester.

General Objectives: The student will be able to

- 1) Define various properties of fluids
- 2) Measure pressure, velocity and flow rate using various instruments.
- 3) State continuity equation, Bernoulli's equation and its applications.
- 4) Estimate various losses in flow through pipes.
- 5) Explain concept of impact of jet on various types of vanes.
- 6) Draw the construction, working of hydraulic pumps and turbines.
- 7) Evaluate performance of turbines and pumps.

# Theory:

| Topics and Contents                                                                                                                               | Hours | Marks |
|---------------------------------------------------------------------------------------------------------------------------------------------------|-------|-------|
| 1. Properties of fluid and Fluid Pressure                                                                                                         |       |       |
| Specific Objectives:                                                                                                                              |       |       |
| Define fluid properties.                                                                                                                          |       |       |
| Differentiate between fluid pressure intensity and pressure head.                                                                                 |       |       |
| Solve numerical related to properties of fluid, fluid pressure and                                                                                |       |       |
| manometers.                                                                                                                                       |       |       |
| Contents:                                                                                                                                         |       |       |

### Practical: Skills to be developed: Intellectual Skills:

- 1. Select appropriate flow and pressure measuring devices for a given situation.
- 2. Analyze the performance of pumps and turbines.

#### **Motor Skills:**

- 1. Use flow and pressure measuring devices.
- 2. Operate pumps and turbines.

#### **List of Practicals:**

- 1. Measure water pressure by using Bourdon's pressure gauge and U-tube Manometer. Also measure discharge of water by using measuring tank and stop watch.
- 2. Calibrate Bourdon's pressure gauge with the help of Dead weight pressure gauge.
- 3. Verify Bernoulli's theorem.
- 4. Determine Coefficient of Discharge of Venturimeter.
- 5. Determine coefficient of Discharge, Coefficient of Contraction and Coefficient of Velocity of Sharp edged circular orifice.
- 6. Determine Darcy's friction factor 'f' in pipes of three different diameters for four different discharges.
- 7. Determine minor frictional losses in pipe fittings.
- 8. Determine overall efficiency of Pelton wheel by using Pelton wheel test rig.
- 9. Determine overall efficiency of Centrifugal Pump & plot its operating characteristics by using Centrifugal pump test rig.
- 10. Determine overall efficiency of Reciprocating pump by using Reciprocating Pump test rig.

#### Assignments

1. Information collection of Centrifugal, reciprocating, multistage pumps and submersible pumps from local market and from internet. Comparison of various models manufactured by different manufacturers. [The market survey is to be completed in a group of (max.) three to four students and the report of the same is to be included as part of term work.]

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

To teach students to understand facts concepts principles and procedures of gas and arc welding, brazing, soldering.

# **Objectives:**

#### The student will be able to:

- 1. Make student familiar with gas welding process.
- 2. Understand phenomenon of manual metal arc welding.
- 3. Describe and use the welding arc & metal transfer mechanism.
- 4. Identify weld defects.
- 5. Use the knowledge of joint design and weld metallurgy
- 6. Compare various metal joining processes welding, brazing & soldering.

#### **Learning Structure:**

# **Details:** Contents

| Chapter | Description                                                        | Marks      | Hours |
|---------|--------------------------------------------------------------------|------------|-------|

# **Practicals:**

# Skill to be developed Intellectual Skill:

- 1. Identify the joining methods of welding
- 2. Understand welding of different materials
- 3. Specify different arc welding parameters.

# Moral Skill:

- 1. Edge preparation for making the welding joint
- 2. Cleaning of edges.
- 3. Use welding machine & equipment.
- 4. Set the tool, job & decide parameter of machines.
- 5. Inspect the dimensions of the job using measuring instruments
- 6. Evaluation of weld quality

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

This subject will help the students to know the basic requirements of fabrication & the orderly sequence in which a component is prepared for fabrication.

#### **Objectives:**

The student will be able to:

- Know basic marking / measuring processes. Identify & select various marking / measuring tools in sheet metal shops.
- To know the methods used for straightening & stiffening in sheet metal works.
- To know recent trends of materials in fabrication.
- To know the layout employed for fabrication processes.
- To know importance of surface cleaning prior to coating.

#### **Learning Structure:**

# **THEORY:**

| Topic and Contents                                                     | Marks | Hours |
|------------------------------------------------------------------------|-------|-------|
| 1. Measurement                                                         |       |       |
| Introduction 04 Marks                                                  |       |       |
| 1. Definition and meaning of :                                         |       |       |
| Quantity, measurement, metrology, measure                              |       |       |
| Precision & accuracy,                                                  |       |       |
| Repeatability,                                                         |       |       |
| Calibration,                                                           |       |       |
| Sensitivity & readability                                              |       |       |
| 2. Sources of error                                                    |       |       |
| 3. Classification of measurements                                      |       |       |
| Standards of measurements 04 Marks                                     |       |       |
| 1. Introduction to standards                                           |       |       |
| 2. Line standard                                                       |       |       |
| 3. End standard                                                        |       |       |
| 4. Angular standard                                                    |       |       |
| Marking process 16Marks                                                |       |       |
| 1. Tools used in marking                                               |       |       |
| 2. Marking methods for large size plates                               |       |       |
| 3. Use of chalk line for marking long straight line                    |       |       |
| 4. Shop method of drawing an ellipse                                   |       |       |
| 5. Plotting ellipse using trammels                                     |       |       |
| 6. Shop method of drawing a circle                                     |       |       |
| 7. Method of marking out bolt holes for flanges                        |       |       |
| 8. Marking out a bracket from a datum surface                          |       |       |
| 9. Procedure for marking out instrument panel                          |       |       |
| 10. Marking of holes in angle sections, channel sections, T- sections, |       |       |
| columns and beams                                                      | 48    | 28    |
| Instruments for datum measurements 04 Marks                            |       |       |
| 1. Vertical datum- plumb line                                          |       |       |
| 2. Horizontal datum- spirit level                                      |       |       |
| 3. Alignment testing- use of tensioned wire, surveyor's level          |       |       |
| Geometric shape 08 Marks                                               |       |       |
| 1. Straightness testing- straight edge method, spirit level method     |       |       |
| 2. Flatness testing- comparison with flat circles, use of spirit level |       |       |
| 3. Squareness testing- engineer's square, block square                 |       |       |
| 4. Roundness measurement – Diametral, circumferential confining        |       |       |
| gauge, rotating on centres, assessment using a V-block, roundness      |       |       |
| measuring machine                                                      |       |       |
| Templates 12 Marks                                                     |       |       |
| 1. The need of templates                                               |       |       |
| 2. Materials used for templates                                        |       |       |
| 3. Information given on templates                                      |       |       |
| 4. Use of templates                                                    |       |       |
| <ul> <li>Templates for setting out sheet metal fabrications</li> </ul> |       |       |
| Templates for hopper plates                                            |       |       |
| Box templates                                                          |       |       |
| Steel templates (ordinary and bushed)                                  |       |       |
| 5. Templates as means of checking                                      |       |       |
| 6. Templates as a means of marking hole positions                      |       |       |

| 7. Templates as means of to provide an economical arrangement of |     |     |
|------------------------------------------------------------------|-----|-----|
| layout for press-work                                            |     |     |
| 8. Templates as a guide for cutting processes                    |     |     |
| 9. Protection and storage of templates and tools                 |     |     |
| 10. Comparison of methods of direct marking and use of templates |     |     |
| 2. Straightening Methods                                         |     |     |
| Mechanical straightening                                         |     |     |
| 1. Manual                                                        |     |     |
| 2. Machine straightening                                         |     |     |
|                                                                  | 08  | 04  |
| Thermal methods                                                  |     |     |
| 1. Hot shrinking                                                 |     |     |
| 2. Use of heat strips                                            |     |     |
| 3. Use of heat triangles                                         |     |     |
| 4. Principle of hot straightening for structural sections        |     |     |
| 3. Stiffening of Fabricated Material                             |     |     |
| Methods of stiffening sheet metal                                |     |     |
| Reasons for stiffening                                           |     |     |
| Stiffening of large panels                                       | 12  | 04  |
| 1. Use of applied stiffeners                                     |     |     |
| 2. Use of angle stiffeners                                       |     |     |
| Need for web stiffeners                                          |     |     |
| 4. Composite Materials in Fabrication                            |     |     |
| Introduction to composite material                               |     |     |
| Classification of composites                                     |     |     |
| Composition of composites                                        | 08  | 04  |
| Processing of composites                                         |     |     |
| Joining of composites                                            |     |     |
| Applications                                                     |     |     |
| 5. Surface Cleaning                                              |     |     |
| Introduction                                                     |     |     |
| Need for coating & cleaning                                      |     |     |
| Methods of surface cleaning                                      | 12  | 04  |
| 1. Chemical method                                               | 12  | 01  |
| 2. Mechanical method                                             |     |     |
| 3. Thermal method                                                |     |     |
| 4. Dry method                                                    |     |     |
| 6. Factory / Workshop Layout                                     |     |     |
| Introduction                                                     |     |     |
| Definition of Factory layout                                     |     |     |
| Importance of layout                                             | 10  | 0.4 |
| Essentials of layout                                             | 12  | 04  |
| Types of layout                                                  |     |     |
| Factors influencing layout                                       |     |     |
| Dynamics plant layout                                            |     |     |
| Examples                                                         | 100 | 40  |
| I Otal                                                           | 100 | 40  |

# Practical:

# Skill to be developed;

# Intellectual skills

- 1. Ability to read job drawings.
- 2. Ability to identify & select proper material & tools for marking / measuring.

# Motor skills

- 1. Ability to set work piece for measurement on measuring instruments / devices.
- 2. Ability to inspect the job for confirming desired dimensions and shape.
- 3. Ability to recognize errors from mistakes and take remedial actions.

# **Practicals**:

# **1.** Demonstration and use of :

- Vernier calliper,
- Micrometer screw gauge,
- Vernier height gauge,
- Vernier depth gauge,
- Feeler gauge, radius gauge & screw pitch gauge
- Slip gauges,
- Universal Bevel Protractor,
- Sine bar
- Angle gauges,

# 2. Study of Engineer's rule,

3. Study of Steel rule and tape (Layout preparation)

'G' Scheme

**Course Name : Diploma in Fabrication Technology & Erection Engineering** 

Course Code: FE/FGSemester: FourthSubject Title: Process Equipment

Subject Code : 17457

# **Teaching and Examination Scheme**

| Teaching Scheme |    |    |              | Examinati | on Scheme |    |     |       |
|-----------------|----|----|--------------|-----------|-----------|----|-----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH        | PR        | OR | TW  | TOTAL |
| 04              |    | 02 | 03           | 100       |           |    | 25@ | 125   |

# **Rationale:**

It is intended that the students understand facts, concepts regarding construction and working of process equipment used in the fabrication industry.

Objectives: The students will be able to-

- 1. Learn pressure vessel terminology.
- 2. Study design loads on process equipments.
- 3. Find stresses / thickness of vessels & dished ends.
- 4. Study of supports.
- 5. Design the process equipment.
- 6. Study & decide the materials & welding processes used in pressure vessel construction.

| General considerations, Non corrosive service, ferrous and non ferrous materials for corrosive service, bolting material, selection of material for hydrogen service, aluminum alloys, stainless steels, method of attaching protective layers.                                                                                                                                                                                                                                                                                                                                                                                                                  | 12    | 10   |
| Note: Derivation / Proof of any formula is not expected                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |       |      |
| TOTAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 100   | 64   |

## Assignments:

Eight assignments based on above theory content. Details of the assignments be written

## **Implementation Strategies:**

The subject matter will be taught as per the teaching scheme for Theory and practical. The subject teacher will prepare and provide learning material/handout for supplementing/ complementing classroom instructions.

## **Rationale:**

The purpose of introducing Professional practices is to fulfill the need of students to stand in today's global market with knowledge and confidence. This can be achieved by arranging industrial visits, expert lectures attitude to present them-selves, get alternative solutions and validation of the selected alternatives, socially relevant activities, and modular courses. Professional Practices is helpful in broadening technology base of students beyond curriculum. Model making exercises allow students to think more creatively and innovatively and inculcating habit of working with their own hands. Modular courses are introduced with a view of learning and acquiring higher technology skills through industry experts and consultants from the respective fields.

## **Objectives:**

The student will be able to:

- 1) Acquire information from different sources.
- 2) Prepare notes for given topics
- 3) Present seminar using power projection system.
- 4) Interact with peers to share thoughts.
- 5) Work in a team and develop team spirit.

## **Intellectual Skill:**

Student will be able to-

- 1) Search information from various resources.
- 2) Prepare notes on selected topics.
- 3) Participate in group discussions.

#### **Motor Skills:**

- 1) Observe industrial practices during visits.
- 2) Prepare slides / charts for presentation in seminar.
- 3) Develop a model

## **Learning Structure:**

## **Content:**

| Topic & Content                                                                               | Hours |  |  |  |  |  |
|-----------------------------------------------------------------------------------------------|-------|--|--|--|--|--|
| 1. Information Search:-                                                                       |       |  |  |  |  |  |
| Information search be made through manufacturers catalogue, Hand books, magazines             |       |  |  |  |  |  |
| journal and websites, and submit a report on any Two Topics in a group of 3 to 4              |       |  |  |  |  |  |
| students, report size shall not be more than 10 pages.                                        |       |  |  |  |  |  |
| Following topics are suggested, any other equivalent topics may be selected.                  |       |  |  |  |  |  |
| 1. Present scenario of electric power generation in Maharashtra state /India.                 |       |  |  |  |  |  |
| 2. Composite materials – Types, properties & application                                      |       |  |  |  |  |  |
| 3. Material handling equipments commonly used in industries.                                  |       |  |  |  |  |  |
| 4. Advances in Automobile engines.                                                            |       |  |  |  |  |  |
| 5. Hydraulic steering systems of Automobile.                                                  |       |  |  |  |  |  |
| 6. Mechanisms used to produce straight-line motion.                                           |       |  |  |  |  |  |
| 7. Mechanisms used for generating intermittent motion.                                        |       |  |  |  |  |  |
| 8. Advanced surface coating techniques like chemical vapor deposition, ion                    | 10    |  |  |  |  |  |
| implantation, physical vapor deposition.                                                      |       |  |  |  |  |  |
| 9. Types of cutting tools- specification, materials and applications.                         |       |  |  |  |  |  |
| 10. Booking of E-Tickets for Railways/Buses/Air travel.                                       |       |  |  |  |  |  |
| 11. Profiles of 2 multinational companies.                                                    |       |  |  |  |  |  |
| 12. Engine lubricants, coolants and additives                                                 |       |  |  |  |  |  |
| 13. Power steering, power windows                                                             |       |  |  |  |  |  |
| 14. ABS(anti lock braking systems)                                                            |       |  |  |  |  |  |
| 15. MPFI(multi point fuel injection) system                                                   |       |  |  |  |  |  |
| 16. Role of MIDC, MSSIDC, DIC, Financial institutions in development of                       |       |  |  |  |  |  |
| industrial sector.                                                                            |       |  |  |  |  |  |
| 17. Solar energy systems - Components and their functions, applications                       |       |  |  |  |  |  |
| 18. Design data book - Study and use of types of data.                                        |       |  |  |  |  |  |
| 2. Lectures by professionals/Industry Experts-                                                |       |  |  |  |  |  |
| Two lectures of two hour duration be arranged on any two topics suggested below or            |       |  |  |  |  |  |
| any other suitable topics to acquire practical information beyond scope of                    |       |  |  |  |  |  |
| curriculum.                                                                                   |       |  |  |  |  |  |
| Students shall prepare a brief report of each lecture as a part of their term work.           |       |  |  |  |  |  |
| 1. Components of project Report.                                                              |       |  |  |  |  |  |
| 2. Various loan schemes of banks, LIC and other agencies for education and other              |       |  |  |  |  |  |
| purposes.                                                                                     |       |  |  |  |  |  |
| 3. Use of plastics & rubbers in Automobiles industries.                                       |       |  |  |  |  |  |
| 4. Type of processes used to protect material surfaces from environmental effect.             | 0.6   |  |  |  |  |  |
| 5. Product life cycle.                                                                        | 06    |  |  |  |  |  |
| 6. Industrial application of mechatronics.                                                    |       |  |  |  |  |  |
| 7. Special features of CNC machines                                                           |       |  |  |  |  |  |
| 8. Gear manufacturing & gear teeth finishing processes.                                       |       |  |  |  |  |  |
| 9. Geal boxes-industrial & Automobile applications.                                           |       |  |  |  |  |  |
| 10. super-miniming operation when industrial applications.                                    |       |  |  |  |  |  |
| 11. processing methods for plastic components.<br>12. Features of modern boilers              |       |  |  |  |  |  |
| 12. Features of modern boners                                                                 |       |  |  |  |  |  |
| 14 Industrial drives-Types, components, comparison and applications                           |       |  |  |  |  |  |
| 15 Introduction to Apprenticeshin Training Scheme                                             |       |  |  |  |  |  |
| 3. Seminars:                                                                                  |       |  |  |  |  |  |
| One seminar be arranged on the subjects related to 4 <sup>th</sup> semester. Or topics beyond | 06    |  |  |  |  |  |
| curriculum.                                                                                   |       |  |  |  |  |  |

| Each student shall submit a report up to 10 pages and deliver the seminar.                 |    |  |  |  |  |  |  |
|--------------------------------------------------------------------------------------------|----|--|--|--|--|--|--|
| batch size - 2-3 students.                                                                 |    |  |  |  |  |  |  |
| Source of information - books, magazine, Journals, Website ,surveys,                       |    |  |  |  |  |  |  |
|                                                                                            |    |  |  |  |  |  |  |
| Topics suggested for guidance-                                                             |    |  |  |  |  |  |  |
|                                                                                            |    |  |  |  |  |  |  |
| 1. Clutches - Types, Principles, working, & applications.                                  |    |  |  |  |  |  |  |
| 2. High pressure boilers.                                                                  |    |  |  |  |  |  |  |
| 3. Heat exchangers - Types, working applications.                                          |    |  |  |  |  |  |  |
| 4. Hydraulic turbines - Types, working & applications.                                     |    |  |  |  |  |  |  |
| 5. Hydraulic pumps - Types, working & applications.                                        |    |  |  |  |  |  |  |
| 6. Sensors - Lypes, principle & applications.                                              |    |  |  |  |  |  |  |
| 7. Super conductor technology - Types, principle & applications.                           |    |  |  |  |  |  |  |
| 8. Semi conductors- Types, materials & applications.                                       |    |  |  |  |  |  |  |
| 9. Industrial brakes- Types, construction, working & applications.                         |    |  |  |  |  |  |  |
| 4. Industrial visits                                                                       |    |  |  |  |  |  |  |
| Structured industrial visits be arranged and report of the same shall be submitted by each |    |  |  |  |  |  |  |
| student to form a part of the term work.                                                   |    |  |  |  |  |  |  |
| No of visits- At least one                                                                 |    |  |  |  |  |  |  |
| Scale of industry- medium scale unit, large scale unit.                                    |    |  |  |  |  |  |  |
| Group size- practical batch                                                                |    |  |  |  |  |  |  |
| Report-not exceeding 7 to 10 pages.                                                        |    |  |  |  |  |  |  |
| Purpose :                                                                                  |    |  |  |  |  |  |  |
| To study the profile of industry                                                           |    |  |  |  |  |  |  |
| To see the advanced manufacturing processes & machinery.                                   |    |  |  |  |  |  |  |
| To observe working of CNC machines, work centres, flexible manufacturing                   |    |  |  |  |  |  |  |
| systems                                                                                    |    |  |  |  |  |  |  |
| To observe working in foundry, forging shop, press shop, heat treatment shop etc.          |    |  |  |  |  |  |  |
| To observe chip less manufacturing machines & processes.                                   |    |  |  |  |  |  |  |
| To study process sheets, quality control charts & production drawings, metallurgical       |    |  |  |  |  |  |  |
| testing laboratory                                                                         | 08 |  |  |  |  |  |  |
| To observe Tool room, standards room etc.                                                  |    |  |  |  |  |  |  |
|                                                                                            |    |  |  |  |  |  |  |
| Following types of industries may be visited in & around the institute.                    |    |  |  |  |  |  |  |
| 1. Foundry                                                                                 |    |  |  |  |  |  |  |
| 2. Forging units                                                                           |    |  |  |  |  |  |  |
| 3. Sheet metal processing unit                                                             |    |  |  |  |  |  |  |
| 4. Machine/ Automobile component manufacturing unit                                        |    |  |  |  |  |  |  |
| 5. Fabrication unit/ powder metallurgy component manufacturing unit.                       |    |  |  |  |  |  |  |
| 6. Machine tool manufacturing unit.                                                        |    |  |  |  |  |  |  |
| /. Any processing industry like chemical, textile, sugar, agriculture, fertilizer          |    |  |  |  |  |  |  |
| industries.                                                                                |    |  |  |  |  |  |  |
| 8. Auto workshop / tour wheeler garage.                                                    |    |  |  |  |  |  |  |
| 9. City water supply pumping station                                                       |    |  |  |  |  |  |  |
| 10. Hydro electric power plant,                                                            |    |  |  |  |  |  |  |
| 11. Wind mills, Solar Park                                                                 |    |  |  |  |  |  |  |

| 5. Socially Relevant Activities                                                                  |    |  |  |  |  |  |  |
|--------------------------------------------------------------------------------------------------|----|--|--|--|--|--|--|
| Conduct any one activity through active participation of students and write the report.          |    |  |  |  |  |  |  |
| Group of students- maximum 4                                                                     |    |  |  |  |  |  |  |
| Report- Not more than 6 pages                                                                    |    |  |  |  |  |  |  |
| List of suggested activities- (activities may be thought in terms of campus improvement)         |    |  |  |  |  |  |  |
| 1. Awareness about carbon credit                                                                 | 06 |  |  |  |  |  |  |
| 2. Anticorruption movement                                                                       |    |  |  |  |  |  |  |
| 3. Awareness about cyber crimes.                                                                 |    |  |  |  |  |  |  |
| 4. Developing good citizens.                                                                     |    |  |  |  |  |  |  |
| 5 Management of E- WASTE                                                                         |    |  |  |  |  |  |  |
| 6 Recycling of waste materials                                                                   |    |  |  |  |  |  |  |
| 7 Accident prevention & enforcement of safely rules                                              |    |  |  |  |  |  |  |
| 8 Awareness about pollution and pollution control                                                |    |  |  |  |  |  |  |
| 9. (Any other relevant activity may be performed)                                                |    |  |  |  |  |  |  |
| 6 Mini Drojosta                                                                                  |    |  |  |  |  |  |  |
| <b>6.</b> Will Projects<br>Students in a group of 4, shall perform any one activity listed below |    |  |  |  |  |  |  |
| Students, in a group of 4, shall perform any one activity listed below.                          |    |  |  |  |  |  |  |
| 1. Model making out of card board paper, wood, thermocol, plastics, metal, clay                  |    |  |  |  |  |  |  |
| etc                                                                                              |    |  |  |  |  |  |  |
| a) Any new idea/principle converted into model                                                   |    |  |  |  |  |  |  |
| b) Mechanisms                                                                                    |    |  |  |  |  |  |  |
| c) Jigs/fixtures                                                                                 |    |  |  |  |  |  |  |
| d) Material handling device, etc.                                                                |    |  |  |  |  |  |  |
| 2. Toy making with simple operating mechanisms                                                   |    |  |  |  |  |  |  |
| 3. Layout of workshop/department/college                                                         |    |  |  |  |  |  |  |
| 4. Experimental set up/testing of a parameter                                                    |    |  |  |  |  |  |  |
| 5. Display board indicating different type of machine components like bearing,                   |    |  |  |  |  |  |  |
| fasteners, couplings, pipe fitting, valves, cams & followers, exploded views of                  |    |  |  |  |  |  |  |
| assemblies, type of welding equipment ,welding rods (drawings, photo graphs )                    |    |  |  |  |  |  |  |
| 6. Any relevant project which will make students to collect information & work                   |    |  |  |  |  |  |  |
| with their own hands.                                                                            |    |  |  |  |  |  |  |
| 7. Students shall arrange exhibition of all mini projects in the class/hall and present          |    |  |  |  |  |  |  |
| the task to the audience/ experts/examiners. The student shall submit a brief                    | 12 |  |  |  |  |  |  |
| report (Max. 5 pages) of the mini project.                                                       |    |  |  |  |  |  |  |
| OR                                                                                               |    |  |  |  |  |  |  |
| Modular course:                                                                                  |    |  |  |  |  |  |  |
|                                                                                                  |    |  |  |  |  |  |  |
| Modular courses on any one of the suggested or equivalent topic be undertaken by a               |    |  |  |  |  |  |  |
| group of 15 to 20 students.                                                                      |    |  |  |  |  |  |  |
| 1. Advance features in CAD                                                                       |    |  |  |  |  |  |  |
| 2. Meshing of solid model using any suitable software                                            |    |  |  |  |  |  |  |
| 3 Developing Unfold Sheet or Hyperblank by using Blanking Software                               |    |  |  |  |  |  |  |
| 4 CAM Software                                                                                   |    |  |  |  |  |  |  |
| 5 Basics of PLC programming                                                                      |    |  |  |  |  |  |  |
| 6 Applications of mechatronics                                                                   |    |  |  |  |  |  |  |
| 7 Pining Technology                                                                              |    |  |  |  |  |  |  |
| 7. Tiping recimology<br>8. Modern packaging technology                                           |    |  |  |  |  |  |  |
| 0. Enterprise Descuree Planning                                                                  |    |  |  |  |  |  |  |
| 9. Enterprise Resource Framming                                                                  |    |  |  |  |  |  |  |
| 10. Dio-pileumane Robots                                                                         |    |  |  |  |  |  |  |
| 11. DIO-IIIIIIIICTY                                                                              |    |  |  |  |  |  |  |

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

## INDUSTRIAL TRAINING (OPTIONAL)

## Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

Student Contact Hours Per Week: 32 Hrs.

## THEORY AND PRACTICAL PERIODS OF 60 MINUTES EACH.

Total Marks : 900

@- Internal Assessment, # - External Assessment, No Theory Examination, \$ - Common to all branches, #\* - Online Examination,

 $\beta$  - Common to CO, CM, CD, CW

Abbreviations: TH-Theory, TU- Tutorial, PR-Practical, OR-Oral, TW- Term Work, SW- Sessional Work.

\*\* Industrial Training (Optional) - Student can undergo Industrial Training of four weeks after fourth semester examination during summer vacation.

Assessment will be done in Fifth semester under Professional Practices-III. They will be exempted from activities of Professional Practices-III of 5<sup>th</sup> Semester

Conduct two class tests each of 25 marks for each theory subject. Sum of the total test marks of all subjects is to be converted out of 50 marks as sessional work (SW).

> Progressive evaluation is to be done by subject teacher as per the prevailing curriculum implementation and assessment norms.

> Code number for TH, PR, OR and TW are to be given as suffix 1, 4, 8, 9 respectively to the subject code.

MSBTE – Final Copy Dt. 30/08/2013

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG/AU

Semester : Fourth

Subject Title : Environmental Studies

Subject Code : 17401

**Teaching and Examination Scheme:**

#### **#\* Online Theory Examination**

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

## **Learning Structure:**

## Theory:

| Topic and Contents                                                  | Hours | Marks |
|---------------------------------------------------------------------|-------|-------|
| Topic 1: Nature of Environmental Studies                            |       |       |
| Specific Objectives:                                                |       |       |
| Define the terms related to Environmental Studies                   |       |       |
| > State importance of awareness about environment in general public | 0.4   |       |
| Contents:                                                           | 01    | 04    |
| • Definition, Scope and Importance of the environmental studies     |       |       |
| • Importance of the studies irrespective of course                  |       |       |
| • Need for creating public awareness about environmental issues     |       |       |
| Topic 2: Natural Resources and Associated Problems                  |       |       |
| Specific Objectives:                                                |       |       |
| > Define natural resources and identify problems associated with    |       |       |
| them                                                                |       |       |
| > Identify uses and their overexploitation                          |       |       |
| > Identify alternate resources and their importance for environment |       |       |
| Contents:                                                           |       |       |
| 2.1 Renewable and Non renewable resources                           |       |       |
| • Definition                                                        |       |       |
| • Associated problems                                               |       |       |
| 2.2 Forest Resources                                                |       |       |
| General description of forest resources                             |       |       |
| • Functions and benefits of forest resources                        |       |       |
| • Effects on environment due to deforestation Timber                |       |       |
| extraction. Building of dams, waterways etc.                        |       |       |
| 2.3 Water Resources                                                 | 04    | 10    |
| • Hydrosphere: Different sources of water                           |       |       |
| • Use and overexploitation of surface and ground water              |       |       |
| • Effect of floods draught dams etc. on water resources and         |       |       |
| community                                                           |       |       |
| 2.4 Mineral Resources:                                              |       |       |
| • Cotocorios of minoral resources                                   |       |       |
| Categories of minima activities                                     |       |       |
| • Basics of mining activities                                       |       |       |
| • Mine safety                                                       |       |       |
| • Effect of mining on environment                                   |       |       |
| 2.5 Food Resources:                                                 |       |       |
| • Food for all                                                      |       |       |
| • Effects of modern agriculture                                     |       |       |
| World food problem                                                  |       |       |
| Topic 3. Ecosystems                                                 |       |       |
| Concept of Ecosystem                                                |       |       |
| Structure and functions of ecosystem                                | 01    | 04    |
| • Energy flow in ecosystem                                          |       |       |
| • Major ecosystems in the world                                     |       |       |
| Topic 4. Biodiversity and Its Conservation                          |       |       |
| Definition of Biodiversity                                          | 02    | 07    |

| Conservation of biodiversity                                                                                                                                                                                                                                                                                 |    |    |
| • Threats to biodiversity                                                                                                                                                                                                                                                                                    |    |    |

## Practical: Skills to be developed:

## Intellectual Skills:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

## Motor Skills:

- 1. Presentation Skills
- 2. Use of multi media

## **List of Projects:**

**Note:** Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds
- 4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

## NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

## **Rationale:**

The aim of the subject is to teach the basic working of the computer motherboard, peripherals and add-on cards. The subject helps the students to do the maintenance of the Computer, peripherals and its add-on cards. The students will be able to select the proper peripheral as per their specification and requirement. This is the core technology subject. The pre-requisite of the subject is Microprocessor. The subject is practical oriented and will develop the debugging skills in the students.

## **Objectives:**

The student will be able to:

- 1. Debug and repair the faults in system.
- 2. Assemble the system.
- 3. Load the operating system and device drivers in the system.

## **Learning Structure:**

## Theory:

## **PRACTICAL:**

Skills to be developed:

## **Intellectual Skills:**

- Understanding basic hardware of computer
- Fault finding of input/output devices.
- Troubleshooting of input/output devices
- Proper connection of input/output devices.

#### **Motor Skills:**

• Proper handling of Computer System Hardware.

## List of Practical:

- 01. Identify and draw the motherboard layout of Intel i3 processor and understand connection and layout of the H67 or P67chipset.
- 02. Perform Basic Input/output System (BIOS) setting and configuration setup using Complementary Metal Oxide Semiconductor (CMOS).
- 03. Format, partition and install a Hard Disk Drive (HDD) and format a pen drive.
- 04. Understand layout, characteristics and functions of different components of Hard Disk Drive (HDD) as a storage device.
- 05. Install Video Graphics Array (VGA) or Super Video Graphics Array (SVGA) display cards.
- 06. Install and understand the working of printer.
- 07. Install and understand the working of Input/output devices such as scanner and modem.
- 08. Connect Switched Mode Power Supply (SMPS) and identify different parts of SMPS. Understand the working of SMPS and Uninterrupted Power Supply (UPS).
- 09. Use diagnostic software to identify installed computer peripherals and test their working condition.
- 10. Find faults related to Monitor, CPU, Hard disk, Printer and other peripherals.
- 11. Form a pico net using Bluetooth devices and transfer data.
- 12. Assemble PC and install an operating system.

## NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

## **Rationale:**

The world in the information era has become network centric. A Computer networks has been growing with rapid technological progress. Computer communication through networking becomes essential part of our life. We can manage many application like Air Line Reservation, Railway Reservation, E-banking, E-Governance, On-Line shopping, E-learning etc. by clicking mouse button from our own place. Because of this, world become the global village. By considering importance of networking towards all aspects of our life, we here introduce basic concept of networks, network classification, network topologies, network devices, Transmission media, Network reference models, concept of TCP/IP.

This knowledge explores the student for understanding current network management technology.

## **Objectives:**

To develop following skills:

## **Intellectual Skills:**

- > Understand network & can identifying benefits of networks.
- > Understand and describe communication media.
- Compare different types of Topology.
- Compare different types of network devices.
- Compare OSI and TCP/IP protocol suite.
- ➢ Configuration of TCP/IP

## Motor Skills:

- 1. Able to handle Computer Network.
- 2. To develop a small Computer Network.

## **Learning Structure:**

## Theory:

| Chapter | Name of the Topic                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Hours | Marks |

## NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

## **Rationale:**

Microprocessor is brain of computer. Intel family is widely used all over the world. 8085 is the 8-bit CPU and 8086 is the 16-bit CPU. 8086 is the base of all upward developed processors. It is more powerful and efficient computing machine. It overcomes all major limitations of the previous processors. It is able to get interfaced with 8-bit, 16-bit systems. IBM PC is introduced in 1980 with 10MB hard disk, one double side double density floppy disk drive, KBD, monitor and asynchronous communications adapter.

This subject covers Basics of 8085, architecture of 8086 along instruction set. It also covers assembly language programming with effective use of procedure and macros. This will act as base for the advanced assembly language programming for next generation microprocessors.

## **General objectives:**

Students will be able to:

- 1. Understand the execution of instructions in pipelining and address generation.
- 2. Write syntax of given instructions.
- 3. Apply instructions in Assembly Language Program for different problem statements.
- 4. Use the procedures and macros in assembly language programming.

## **Learning Structure:**

## Theory

| Name of Topics                                               | Hours | Marks |
|--------------------------------------------------------------|-------|-------|
| Topic 1: Basics of Microprocessor                            |       |       |
| Specific Objective: Students will be able to                 |       |       |
| ➢ Draw the architecture of 8085                              |       |       |
| Define the functions of different pins of 8085               |       |       |
| Identify status of different flags                           |       |       |
| 1.1 Evolution of Microprocessor and types                    | 04    | 08    |
| 1.2 8085 Microprocessor,                                     |       |       |
| Salient features                                             |       |       |
| • Pin description,                                           |       |       |
| • Architecture of 8085 - Functional Block diagram,           |       |       |
| Register organization,                                       |       |       |
| Topic 2 :16 Bit Microprocessor: 8086                         |       |       |
| Specific Objective: Students will be able to                 |       |       |
| Define the functions of different pins                       |       |       |
| Draw functional block diagram of 8086                        |       |       |
| ➢ Understand the operating modes of 8086                     |       |       |
| 2.1 8086 Microprocessor,                                     |       |       |
| Salient features                                             |       |       |
| Pin descriptions                                             |       |       |
| • Architecture of 8086 - Functional Block diagram            |       |       |
| Register organization                                        |       |       |
| <ul> <li>Concepts of pipelining</li> </ul>                   | 12    | 24    |
| Concepts of piperining,     Momory segmentation              |       |       |
| Methody segmentation     Deviced memory addresses concretion |       |       |
| • Physical memory addresses generation.                      |       |       |
| 2.2 Operating Modes of 8080                                  |       |       |
| • 8284 Clock Generator                                       |       |       |
| • 8288 Bus Controller                                        |       |       |
| • 74LS245 Bi-directional Buffer                              |       |       |
| • 74LS373 Octal Latch                                        |       |       |
| Minimum Mode operation and its timing diagram                |       |       |
| Maximum Mode operation and its timing diagram                |       |       |
| <b>Topic 3 : Instruction Set of 8086 Microprocessor</b>      |       |       |
| Specific Objective: Students will be able to                 |       |       |
| Understand the different types of instructions               |       |       |
| Identify the addressing modes of instructions                |       |       |
| State the operation of an instructions                       |       |       |
| 3.1 Machine Language Instruction format,                     |       |       |
| addressing modes                                             |       |       |
| 3.2 Instruction set, Groups of Instructions                  | 10    | 20    |
| Arithmetic Instructions                                      |       |       |
| Logical Instructions                                         |       |       |
| Data transfer instructions                                   |       |       |
| Bit manipulation instructions                                |       |       |
| String Operation Instructions,                               |       |       |
| Program control transfer or branching Instructions           |       |       |
| Process control Instructions                                 |       |       |
| Topic 4 : The Art of Assembly Language Programming           | 04    | 08    |

| Specific Objective: Students will be able to                          |    |     |
|-----------------------------------------------------------------------|----|-----|
| Know the program development steps                                    |    |     |
| Use the different program development tools                           |    |     |
| Illustrate the functions of assembler directive and operators         |    |     |
| 4.1 Program development steps                                         |    |     |
| • Defining problem,                                                   |    |     |
| Writing Algorithms                                                    |    |     |
| • Flowchart                                                           |    |     |
| Initialization checklist                                              |    |     |
| Choosing instructions                                                 |    |     |
| • Converting algorithms to assembly language programs.                |    |     |
| 4.2 Assembly Language Programming Tools                               |    |     |
| • Editors                                                             |    |     |
| • Assembler                                                           |    |     |
| • Linker                                                              |    |     |
| • Debugger.                                                           |    |     |
| 4.3 Assembler directives and Operators                                |    |     |
| Topic 5: 8086 Assembly Language Programming.                          |    |     |
| Specific Objective: Students will be able to                          |    |     |
| Write a appropriate programs using editor                             |    |     |
| Run program using assembler and linker                                |    |     |
| Debug program using debugger                                          |    |     |
| 5.1 Model of 8086 assembly language programs                          |    |     |
| 5.2 Programming using assembler -                                     |    |     |
| • Arithmetic operations on Hex and BCD numbers - Addition,            |    |     |
| Subtraction, Multiplication and Division                              | 10 | 24  |
| Sum of Series                                                         | 12 | 24  |
| Smallest and Largest numbers from array                               |    |     |
| <ul> <li>Sorting numbers in Ascending and Descending order</li> </ul> |    |     |
| • Finding ODD/EVEN numbers in the array                               |    |     |
| <ul> <li>Finding Positive and Negative Numbers in array</li> </ul>    |    |     |
| Block transfer                                                        |    |     |
| • String Operations - Length, Reverse, Compare, Concatenation, Copy   |    |     |
| • Count Numbers of '1' and '0' in 8/16 bit number                     |    |     |
| BCD to Hex and Hex to BCD number conversion                           |    |     |
| Topic 6 : Procedure and Macro in Assembly Language Program            |    |     |
| Specific Objective: Students will be able to                          |    |     |
| Understand the purpose of procedure and macros                        |    |     |
| Use procedure and macros                                              |    |     |
| 6.1 Procedure                                                         |    |     |
| Defining Procedure - Directives used, FAR and NEAR                    | 06 | 16  |
| CALL and RET instructions.                                            |    |     |
| Reentrant and Recursive procedures.                                   | ſ  |     |
| Assembly Language Programs using Procedure                            |    |     |
| 6.2 Defining Macros.                                                  | ſ  |     |
| Assembly Language Programs using Macros.                              |    |     |
| Total                                                                 | 48 | 100 |

## Skills to be developed:

## Intellectual skills:

- Use of programming language constructs in program implementation.
- To be able to apply different logics to solve given problem.
- To be able to write program using different implementations for the same problem
- Study different types of errors as syntax semantic, fatal, linker & logical
- Debugging of programs
- Understanding different steps to develop program such as
  - Problem definition
  - Analysis
  - Design of logic
  - ➢ Coding
  - ➢ Testing
  - > Maintenance (Modifications, error corrections, making changes etc.)

## Motor skills:

• Proper handling of Computer System.

## **Practicals:**

## List of Practical:

- 1. Identify the Assembly Language programming tools like Assembler, linker, debugger, editor.
- 2. Write an Assembly Language Program to add / subtract two 16 bit numbers.
- 3. Write an ALP to find sum of series of numbers.
- 4. Write an ALP to multiply two 16 bit unsigned/ signed numbers.
- 5. Write an ALP to divide two unsigned/ signed numbers (32/16, 16/8, 16/16, 8/8)
- 6. Write an ALP to add / Sub / multiply / Divide two BCD numbers.
- 7. Write an ALP to find smallest/ largest number from array of n numbers.
- 8. Write an ALP to arrange numbers in array in ascending/ descending order.
- 9. Write an ALP to perform block transfer data using string instructions / without using string instructions.
- 10. Write an ALP to compare two strings using string instructions / without using string instructions.
- 11. Write an ALP to display string in reverse order, string length, Concatenation of two strings.
- 12. Write an ALP to convert Hex to Decimal, Decimal to Hex.

#### NOTE:

> Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.

# > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

The ability to organize & process information is key to success in modern age. Object Oriented Programming has become the most preferred approach for software projects. It offers a new and powerful way to cope up with complexity of real world problems. Among the OOP languages available, C++ is one of the most widely used language.

Instead of viewing program as a series of steps to be carried out, OOP approach views it as a group of objects that have certain properties & can take appropriate actions.

Object Oriented Concepts like inheritance, polymorphism, data abstraction and encapsulation etc. requires knowledge of C++, which also acting as base for programming languages like Java, Object Oriented Modeling & Designing (OOMD), VC++.

## **Objectives:**

To develop following skills:

## Intellectual Skills:

- 1. Understand the concepts of OOP.
- 2. Implement programs based on OOP concepts.
- 3. Understand basic fundamentals of C++.
- 4. Develop small software applications using C++.

## **Motor Skills:**

1. Proper Handling of Computer System.

#### MSBTE – Final Copy Dt. 30/08/2013

## **Learning Structure:**

## Theory:

| Topic<br>No | Contents                                                                | Hours | Marks |
|-------------|-------------------------------------------------------------------------|-------|-------|
| 110         | Principles of Object Oriented Programming                               |       |       |
|             | Objectives:                                                             |       |       |
|             | <ul> <li>State OOP's basic Concepts.</li> </ul>                         |       |       |
|             | Difference between OOP & POP.                                           |       |       |
|             | $\succ$ C++ Programming structure.                                      |       |       |
|             | 1.1 Its need & requirement, Procedure Oriented Programming (POP)        |       |       |
| 1           | verses Object Oriented Programming (OOP). Basic concepts of             | 06    | 12    |
|             | Object Oriented Programming, Object Oriented Languages.                 |       |       |
|             | Applications of OOP.                                                    |       |       |
|             | 1.2 Beginning with C++: What is C++?, keywords, variables,              |       |       |
|             | constants basic data types, operators, scope resolution operator,       |       |       |
|             | memory management operators, console input/output, structure of         |       |       |
|             | C++ program.                                                            |       |       |
|             | Classes & Objects:                                                      |       |       |
|             | Objectives:                                                             |       |       |
|             | Defining classes & objects.                                             |       |       |
|             | Declaring & using static data member & static member                    |       |       |
|             | function, friend function.                                              |       |       |
| 2           | Programs based on classes & objects.                                    |       |       |
|             | 2.1 Structures in C++.                                                  | 08    | 20    |
|             | 2.2 Class & Object: Introduction, specifying a class, access specifies, |       |       |
|             | defining member functions, creating Objects, memory allocations         |       |       |
|             | for objects.                                                            |       |       |
|             | 2.3 Array of Objects, Object as function arguments.                     |       |       |
|             | 2.4 Static data members, static member function, friend Function        |       |       |
|             | Constructors & Destructors                                              |       |       |
|             | Objectives:                                                             |       |       |
|             | State Concepts of constructor & destructor, types of                    |       |       |
|             | constructor.                                                            |       |       |
| 3           | Programs based on constructor & destructors                             | 08    | 14    |
|             | 3.1 Concepts of Constructors, Types of constructors:                    |       |       |
|             | Default, Parameterized, Copy.                                           |       |       |
|             | 3.2 Overloaded Constructors : Multiple Constructors in a Class,         |       |       |
|             | 2.2 Destructors with default arguments.                                 |       |       |
|             | 5.5 Destructors.                                                        |       |       |
|             | Objectives:                                                             |       |       |
|             | Concept of Inheritance & its types                                      |       |       |
|             | <ul> <li>Types of Visibility modes</li> </ul>                           |       |       |
| 4           | <ul> <li>Programs based on Inheritance</li> </ul>                       | 08    | 20    |
| -           | 4.1 Introduction defining a derived class visibility modes & effects    | 00    | 20    |
|             | 4.2 Types of Inheritance · Single multilevel multiple                   |       |       |
|             | hierarchical hybrid                                                     |       |       |
|             | 4.3 Virtual base class, abstract class, constructors in derived class.  |       |       |
|             | Pointers in C++                                                         |       |       |
| -           | Objectives:                                                             | 10    | 10    |
| 5           | Declare Pointer & Pointer arithmetic.                                   | 10    | 18    |
|             | Pointer to Arrays, string & Object.                                     |       |       |

|   | address operator, Pointer arithmetic.                                                                                                                                |    |     |  |
|---|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-----|--|
|   | <ul><li>5.2 Pointer to Array: Searching, Insertion, deletion</li><li>5.3 Pointer to String: Searching, finding length, comparisons, concatenation, reverse</li></ul> |    |     |  |
|   |                                                                                                                                                                      |    |     |  |
|   | 5.4 Pointer to Object: Pointer to Object, this pointer, Pointer to                                                                                                   |    |     |  |
|   | derived class.                                                                                                                                                       |    |     |  |
|   | Polymorphism                                                                                                                                                         |    |     |  |
|   | Objectives:                                                                                                                                                          |    |     |  |
|   | Polymorphism concept & its types.                                                                                                                                    |    |     |  |
|   | Program for overloading operators & functions.                                                                                                                       |    |     |  |
| 6 | 6.1 Introduction, Types of polymorphism: Compile time, Run time                                                                                                      | 00 | 16  |  |
| 0 | 6.2 Compile time Polymorphism: Function overloading, operator                                                                                                        | 08 | 10  |  |
|   | overloading: Overloading unary and binary operators, Rules for                                                                                                       |    |     |  |
|   | operator overloading.                                                                                                                                                |    |     |  |
|   | 6.3 Run time polymorphism: Virtual functions, rules for virtual                                                                                                      |    |     |  |
|   | functions, pure virtual function.                                                                                                                                    |    |     |  |
|   | Total                                                                                                                                                                | 48 | 100 |  |

## List of Practical:

| Sr. No. | Title of Experiment                                                                                                                                                             |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1       | Write a program to Input & Output data for exchanging values of two variables.                                                                                                  |
| 2       | Develop a program to declare a class 'person' having data members name, age & salary.<br>Accept and display this data for one object.                                           |
| 3       | Write a program to declare a class 'employee' having data members name and age.<br>Accept and display the data for three objects.                                               |
| 4       | Write a program to show how static member is shared by multiple objects of the same class.                                                                                      |
| 5       | Develop a program to find out the mean value of a given number using friend function.                                                                                           |
| 6       | Develop a program to print student details of 'stud' class using constructor and destructor                                                                                     |
| 7       | Write a program to find prime number using default argument in constructor                                                                                                      |
| 8       | Write a program to find out the payroll system using single level inheritance.                                                                                                  |
| 9       | <ul><li>A. Write a program to find student details using multiple inheritance.</li><li>B. Write a program to compute total marks of student using virtual base class.</li></ul> |
| 10      | Write a program to evaluate the largest number of an array using pointer                                                                                                        |
| 11      | Write a program to search a character in a string using pointer.                                                                                                                |
| 12      | Write a program to input and display code and price for two items using pointer to object.                                                                                      |
| 13      | Write a program to display roll_no and name of student using 'this' pointer.                                                                                                    |
| 14 | Write a program to using function overloading to calculate volume of cube, cylinder & rectangular box |
|----|-------------------------------------------------------------------------------------------------------|
| 15 | Write a program to overload unary '' operator                                                         |
| 16 | Write a program to display the output using the virtual function.                                     |

#### **Teaching and Examination Scheme**

| Teac | ching Sch | neme |              |    | Examinati | on Scheme |     |       |
|------|-----------|------|--------------|----|-----------|-----------|-----|-------|
| TH   | TU        | PR   | PAPER<br>HRS | TH | PR        | OR        | TW  | TOTAL |
|      |           | 04   |              |    | 50#       |           | 50@ | 100   |

#### **Rationale:**

Technology moves on a tremendous pace. In modern society, multimedia technology deals with developments in communication, internet, hardware technologies and tools.

The contents of this subject portray the present and future developments in the area of multimedia.

It is a practical oriented subject which provides the students an insight into various fonts, basic shapes, images, audio formats, video formats, animation controls and tools.

#### **General Objectives:**

Students will be able to

- > To know multimedia fundamentals and multimedia architecture.
- > To understand need of data compression and various compression techniques.
- > To know concepts of text, image, audio, video and animation
- ➤ To use multimedia tool-Flash, Adobe, Dreamweaver

#### Learning Structure:

#### **Learning Structure:**

#### **Content:**

Note: Contents of theory should be taught in practical period with the help of LCD projector.

| Sr. No. | Activity                                                                      | Hours |  |  |  |  |  |  |
|---------|-------------------------------------------------------------------------------|-------|--|--|--|--|--|--|
|         | Introduction to Flash                                                         |       |  |  |  |  |  |  |
|         | <ul> <li>Introduction to Multimedia tool – Flash</li> </ul>                   |       |  |  |  |  |  |  |
|         | Creating & Modifying elements                                                 |       |  |  |  |  |  |  |
| 1       | • Line tool, fill/attributes, different shapes, text tools & pen tool         | 04    |  |  |  |  |  |  |
| -       | Activity:                                                                     | 04    |  |  |  |  |  |  |
|         | Selecting lines fill with arrow tool, selecting shapes, using lasso tool      |       |  |  |  |  |  |  |
|         | performing basic editing tools, selecting & deselecting elements,             |       |  |  |  |  |  |  |
|         | modifying created objects.                                                    |       |  |  |  |  |  |  |
|         | Dream weaver and Firework                                                     |       |  |  |  |  |  |  |
|         | Activity:                                                                     |       |  |  |  |  |  |  |
|         | • To set up website in Dreamweaver.                                           |       |  |  |  |  |  |  |
| 2       | • To create content using Microsoft Word.                                     | 02    |  |  |  |  |  |  |
| -       | • To copy content from Word and paste in web page.                            | 03    |  |  |  |  |  |  |
|         | • To create CSS DIV to hold navigation index.                                 |       |  |  |  |  |  |  |
|         | • To create page navigation index.                                            |       |  |  |  |  |  |  |
|         | • To link page index to page content using anchors.                           |       |  |  |  |  |  |  |
|         | Theory: compression and Decompression                                         |       |  |  |  |  |  |  |
|         | <ul> <li>Need, Types, Evaluating &amp; Visibility</li> </ul>                  |       |  |  |  |  |  |  |
|         | • Evaluating the Compression System, Types of compression,                    | 1     |  |  |  |  |  |  |
|         | Need of Data Compression                                                      |       |  |  |  |  |  |  |
|         | Color Gray Scale and Still Video Image                                        |       |  |  |  |  |  |  |
|         | Color Characteristics                                                         |       |  |  |  |  |  |  |
| 3       | Color Model                                                                   | 02    |  |  |  |  |  |  |
| 5       | Activity:                                                                     | 03    |  |  |  |  |  |  |
|         | Find answers through software and try to incorporate in the practicals        |       |  |  |  |  |  |  |
|         | How much Compression require?                                                 |       |  |  |  |  |  |  |
|         | • How Good is Picture,                                                        |       |  |  |  |  |  |  |
|         | • How fast Does it Compress or Decompress.                                    |       |  |  |  |  |  |  |
|         | • What is effect of hardware on the multimedia application development?       |       |  |  |  |  |  |  |
|         | • Does it take. Redundancy & Usability in consideration?                      |       |  |  |  |  |  |  |
|         | Theory: Jpeg Architecture. Formats                                            |       |  |  |  |  |  |  |
| 4       | Activity:                                                                     | 02    |  |  |  |  |  |  |
|         | Use theory concepts in the practicals                                         |       |  |  |  |  |  |  |
|         | Theory:                                                                       |       |  |  |  |  |  |  |
| 5       | Mpeg architecture and File format                                             | 02    |  |  |  |  |  |  |
| -       | • MPEG-objectives, Architecture, BIT stream syntax performance                |       |  |  |  |  |  |  |
|         | • MPEG2 & MPEG4                                                               |       |  |  |  |  |  |  |
|         | Theory:                                                                       |       |  |  |  |  |  |  |
|         | Revision of Basic tag, Cascaded, Inline and Embedded style, Javascript for    |       |  |  |  |  |  |  |
| 6       | Client side validation like Blank check, String check for name, Numeric check |       |  |  |  |  |  |  |
| 0       | for telephone number, validate email address, date of birth                   |       |  |  |  |  |  |  |
|         | Activity:                                                                     |       |  |  |  |  |  |  |
|         | Construction of website using text, picture/Graphics / Audio /Video using     |       |  |  |  |  |  |  |
|         | flash, HTML, DHMTL, CSS, Scripts                                              |       |  |  |  |  |  |  |

#### **Intellectual skills:**

- To create and edit images using image editing software
- To create animation, build and play movie
- To integrate Audio and Video
- To integrate Multimedia in web page

## Motor Skills:

Proper handling of computer system with multimedia system

## List of Practical:

| Sr. No | Name Practical                                                                                                                                                                          | Hours |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| 1      | Design an Advertisement in Flash                                                                                                                                                        | 2     |
| 2      | Implement C/VB program to Read BMP, Jpeg, GIF image and display                                                                                                                         | 2     |
| 3      | Write program for Small Website college, Mall, School, Theatre etc. which include basic components                                                                                      | 2     |
| 4      | Create multimedia database for student ID card preparation ie. storage image in data base                                                                                               | 2     |
| 5      | Edit the sample movie clip using Adobe premiere software                                                                                                                                | 2     |
| 6      | Design a game/application in flash                                                                                                                                                      | 2     |
| 7      | Implement Calculator and Media Player with voice control:<br>Button, Label ,Text box control of VB, How use OCX control in VB ,<br>Mediaplayer, DirectSS and Direct SR component of VB. | 2     |
| 8      | Implement C/VB program to Display color, height, width, resolution ,and other such tag value of Different image formats                                                                 | 2     |

#### **Rationale:**

Our world is witnessing a measure change in communication pattern with expansion of industrial sphere, as industries demanding more competitive and challenging students.

To create multicultural working professionals, student must have positive attitude, confidence, and ability to communicate in addition to basic technological skill.

The purpose of introducing professional practices is to provide opportunity to diploma holder to undergo activities which will enable them to develop confidence. The semester is planned with expert lectures, seminar on technical topics and soft skills, group discussion along with mini project.

#### **Objectives**:

#### **Intellectual Skills:**

Students should be able to:

- 1. Acquire the knowledge from different resources.
- 2. Present a given topic effectively in a seminar and build a stage-daring.
- 3. Interact with colleague through group discussion.

## **Learning Structure:**

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

## INDUSTRIAL TRAINING (OPTIONAL)

## Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

#### **#\* Online Theory Examination**

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

## **Learning Structure:**

## Theory:

| Topic and Contents                                                | Hours | Marks |
|-------------------------------------------------------------------|-------|-------|
| Topic 1: Nature of Environmental Studies                          |       |       |
| Specific Objectives:                                              |       |       |
| Define the terms related to Environmental Studies                 |       |       |
| State importance of awareness about environment in general public | 01    | 04    |
| Contents:                                                         | 01    | 04    |
| • Definition, Scope and Importance of the environmental studies   |       |       |
| Importance of the studies irrespective of course                  |       |       |
| Need for creating public awareness about environmental issues     |       |       |
| <b>Topic 2: Natural Resources and Associated Problems</b>         |       |       |
| Specific Objectives:                                              |       |       |
| Define natural resources and identify problems associated with    |       |       |
| them                                                              |       |       |
| Identify uses and their overexploitation                          |       |       |
| Identify alternate resources and their importance for environment |       |       |
| Contents:                                                         |       |       |
| 2.1 Renewable and Non renewable resources                         |       |       |
| • Definition                                                      |       |       |
| Associated problems                                               |       |       |
| 2.2 Forest Resources                                              |       |       |
| • General description of forest resources                         |       |       |
| • Functions and benefits of forest resources                      |       |       |
| • Effects on environment due to deforestation, Timber             |       |       |
| extraction, Building of dams, waterways etc.                      | 04    | 10    |
| 2.3 Water Resources                                               | 01    | 10    |
| • Hydrosphere: Different sources of water                         |       |       |
| • Use and overexploitation of surface and ground water            |       |       |
| • Effect of floods, draught, dams etc. on water resources and     |       |       |
| community                                                         |       |       |
| 2.4 Mineral Resources:                                            |       |       |
| Categories of mineral resources                                   |       |       |
| Basics of mining activities                                       |       |       |
| • Mine safety                                                     |       |       |
| • Effect of mining on environment                                 |       |       |
| 2.5 Food Resources:                                               |       |       |
|                                                                   |       |       |
| • Food for all                                                    |       |       |
| • Effects of modern agriculture                                   |       |       |
| World food problem                                                |       |       |
| Topic 3. Ecosystems                                               |       |       |
| Concept of Ecosystem                                              |       |       |
| • Structure and functions of ecosystem                            | 01    | 04    |
| • Energy flow in ecosystem                                        |       |       |
| Major ecosystems in the world                                     |       |       |
| Topic 4. Biodiversity and Its Conservation                        |       |       |
| Definition of Biodiversity                                        | 02    | 06    |
| • Levels of biodiversity                                          |       |       |

#### Practical: Skills to be developed:

## **Intellectual Skills**:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

## Motor Skills:

- 1. Presentation Skills
- 2. Use of multi media

## List of Projects:

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds

4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

The science of instrumentation system plays vital role in the development of technology. An electronic system has prime importance in the field of instrumentation. Most of the physical parameters can be converted into electrical signal with the use of transducers. The obtained electrical signal can be conditioned, processed, displayed and controlled with the use of advanced control system.

With the background of measuring instruments, this subject deals with measurement of different physical parameters like temperature, pressure etc. covering the entire gamut of industrial measurement. Different types of transducers used for measurement of different physical quantities with their construction, working principle, advantages, and disadvantages are studied through this subject.

#### **General Objectives:**

After studying this subject the students will be able to:

- 1) Understand the nature and working of instrumentation system used in industrial & general applications.
- 2) Classify the physical parameters with their proper units
- 3) Understand the concepts of different types of transducers

### **Learning Structure:**

## **Theory Contents:**

| Topic<br>No | Theory                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Hrs. | Marks |

## **Practical:** Skills to be developed:

## **Intellectual Skills:**

- Selection of transducer based on application.
- > Interpretation of results.

## Motor Skills:

- > Connection of different transducers with measuring system.
- > Measurement of various physical parameters using transducers.
- > Observation and plotting the characteristics.

#### **List of Practicals:**

| Sr. No. | Title of the Experiment         |  |
|---------|---------------------------------|--|
| 1       | Measure displacement using LVDT |  |

| 2  | Measure weight using strain gauge pressure transducer with cantilever setup  |  |  |
|----|------------------------------------------------------------------------------|--|--|
| 3  | Measure pressure using Bourdon tube pressure gauge                           |  |  |
| 4  | Calibrate pressure gauge using Dead weight pressure gauge tester             |  |  |
| 5  | Determine the rate of flow of liquid in pipe using Rotameter                 |  |  |
| 6  | Calculate flow through pipe using orifice meter                              |  |  |
| 7  | Measure temperature of liquid using Resistance Temperature Detector (PT 100) |  |  |
| 8  | Measure temperature of liquid using thermocouple                             |  |  |
| 9  | Observe and interpret humidity of air using wet and dry bulb Hygrometer      |  |  |
| 10 | Measure speed of motor using non contact type photo electric tachometer.     |  |  |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Day by day the change in Electronics Industry is dynamic. The role of Diploma engineers changed over the years. Engineers should have concepts of industrial electronics. Electronic control circuits have major role in Industries for which study of power devices is essential.

Concepts of electronic devices and circuits along with their applications are necessary. Industrial electronic is the foundation subject to study industrial drives, and advanced industrial electronics.

#### **Objectives:**

Students will be able to:

- 1. Understand construction and operating principle of various power electronic devices.
- 2. Study construction and operation of controlled rectifiers, choppers and inverter and industrial control circuits.

#### **Learning Structure:**

#### Theory:

| Topic<br>No | Contents                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Hours | Marks |

#### **Practical:**

Skills to be developed:

#### **Intellectual Skills:**

- 1) Selection of proper devices and instruments.
- 2) Interpretation of characteristics under various conditions.

#### **Motor Skills:**

- 1) Make accurate measurements.
- 2) Adjust proper firing angle.
- 3) Observe and draw the output waveforms
- 4) Conduct test on control circuits.

#### **List of Practicals:**

- 1) Plot output characteristics of power transistor.
- 2) Plot V-I characteristics of IGBT.
- 3) Determine the break over voltage using of DIAC.
- 4) Determine latching current and holding current using I-V characteristics of SCR.
- 5) Effect of variation of R, C in R and RC triggering circuits on firing angle of SCR.
- 6) Effect of variation of R in UJT Triggering technique.
- 7) Draw the output waveforms of three phase half wave Rectifier using diodes.
- 8) Draw the output waveform of half wave controlled rectifier with resistive load and determine load voltage.
- 9) Draw the output waveform of full wave controlled rectifier with resistive load, resistive-Inductive load, freewheeling Diode and determine load voltage.
- 10) Determine the effect of firing angle using DIAC and TRIAC on output power (using different loads such as bulb, motor or heater).

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Modern age technology has developed on high density and high speed electronics circuits. Integrated circuits are basis of these high density circuits enabled to reduce size, weight and cost of equipments. They have intrinsic features such as low power consumption, low noise and ease of design.

Today the growth of any industry depends upon electronics to great extent. Contents of this subject are the basic building blocks of different analog circuits.

Basic operating and designing principle of such a large collection of circuits establishes a foundation for understanding new development in the electronics field, instrumentation and power control. This subject acquaints student with general analog principles and design methodologies using integrated circuit for system design.

Prerequisites various devices and circuits studied in elements of electronics and electronic devices and circuits. Prospects- LSI, MSI, VLSI.

#### **General Objectives:**

Students will be able to:

- Understand working principle of Op-Amp and IC555
- Develop electronics circuits using timer IC555 and Op-Amp

• Analyze the response of frequency selective circuits such as PLL with respect to the incoming signal.

## Practical:

### **Intellectual Skills:**

- 1. Interpret the waveforms.
- 2. Find faults in circuits.

#### Motor Skill:

1. Testing and Measurement.

## **List of Practicals:**

| Sr. No. | Title of the Experiment                                                                                        |
|---------|----------------------------------------------------------------------------------------------------------------|
|         | Determine the op-amp parameters:                                                                               |
| 01      | • Input Offset Voltage (V <sub>io</sub> )                                                                      |
| 01      | • Output Offset Voltage $(V_{00})$                                                                             |
|         | Common mode rejection ratio (CMRR)                                                                             |
| 02      | Determine the gain of Inverting and Non-inverting amplifier using op-amp and compare it with theoretical gain. |
| 03      | Verify the operation of Adder and Subtractor circuit using op-amp IC 741.                                      |
|         | Verify the working of active integrator and differentiator circuits using op-amp IC                            |
|         | 741 for following inputs:                                                                                      |
| 04      | • Sine waveform                                                                                                |
|         | • Square waveform                                                                                              |
|         | Rectangular waveform                                                                                           |
| 05      | Assemble V to I converter and I to V converter using IC 741 and measure the                                    |
| 05      | respective output.                                                                                             |
|         | Verify the working of following comparator circuits using op-amp IC 741 and draw                               |
| 06      | the input-output waveforms                                                                                     |
| 00      | • Zero crossing detector                                                                                       |
|         | Active peak detector                                                                                           |
| 07      | Assemble first order low pass Butterworth filter using op-amp and plot the frequency                           |
| 07      | response and determine its cutoff frequency.                                                                   |
| 08      | Assemble Astable multivibrator circuit using IC 741. Plot the output waveform and                              |
| 00      | determine the frequency of oscillations and duty cycle.                                                        |
| 09      | Assemble Monostable multivibrator circuit using IC 555. Plot the output waveform                               |
| 07      | and determine the on-time.                                                                                     |
| 10      | Assemble Schmitt trigger circuit using IC 555. Plot the output waveform and                                    |

|    | determine UTP and LTP                                                             |
|----|-----------------------------------------------------------------------------------|
| 11 | Assemble Instrumentation amplifier circuit using IC 324 and determine the overall |
|    | gain.                                                                             |
| 12 | Verify the operation of frequency Multiplier using PLL IC 565 and determine the   |
| 12 | output frequency.                                                                 |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

The Concept of global village has become reality only due to advancement in communication technology. In India communication has developed by leaps and bounds in last two decades. We are witness to the mobile and television revolution. In this Scenario, diploma passed out students should be aware about the principles, procedure and application of communication techniques, so that they can face the technological changes happening due to globalization & competition. The upcoming field of fibre optics plays a vital role in present communication systems. The knowledge of this subject will help the students to handle and operate different communication systems.

#### **General Objectives:**

After Studying this subject the students will be able to

- 1. Describe various communication systems.
- 2. Understand concept about the digital communication, multiplexing techniques and encoding techniques.
- 3. Understand basic fundamentals in satellite, mobile and data communication.
- 4. Understand the fundamentals of fibre optic communication.

# **Theory Contents:**

| Topic<br>No | Theory                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Hrs. | Marks |
|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------|
| 1           | Fundamentals of Electronic Communication         Specific objectives:         > State basic terminology concepts regarding Electronic Communication.         > Know different techniques of analog communication.         Contents:         1.1 Basics of communication system [12]         Block diagram of communication system.         Electromagnetic spectrum         Concept of decibel bandwidth, information capacity in communication.         Terminology related to noise         sources of noise         Effects of noise.         Signal to noise ratio(SNR)         Noise flagre         Noise factor         Noise figure         Noise figure         Need for modulation         Classification of communication system.         Need for modulation         Understanding of AM, FM, & PM on the basis of definition, waveform, bandwidth. Modulation index, numerical based on modulation index.         FM modulation circuit using varactor diode.         Concept of demodulation- amplitude demodulation by diode detector.         1.2 Pulse Modulation         Block diagram for generation waveforms, working, principle, advantages, disadvantages & applications of PAM,PWM & PPM. (No Numericals) | 10   | 18    |

# Practical's:

Skills to be developed:

# **Intellectual Skills**

- 1. Interpretation of result.
- 2. Selection of communication techniques based on application.

## **Motor Skills**

- 1. Make connections/arrange experimental set up carryout the tests.
- 2. Observe and record out puts.
- 3. Draw waveforms.
- 4. Locate the faults.

#### List of Experiments:

- 1. Measurement of modulation index of amplitude modulated wave and observe the effect of modulating signal voltage on it by Emitter / Base / Collector Modulation.(any one circuit)
- 2. Measurement of modulation index of the frequency modulated wave and observe the effect of modulating and Carrier signal voltage on Frequency Modulation.(construct the circuit by using IC8038)
- 3. Generate PAM and draw input / output waveform and measure amplitude of each pulse.
- 4. Generate PWM and draw input / output waveform and measure Width of each pulse.
- 5. Generate ASK Signal and draw input/output waveforms.
- 6. Generate FSK Signal and draw input/output waveforms.
- 7. Generate PSK Signal and draw input/output waveforms.
- 8. Generate PCM Signal and draw input/output waveforms.
- 9. Generate PPM Signal and draw input/output waveforms.
- 10. Identify the components required for LAN networking.
- 11. Preparation of patch cords and cross connection cables required for LAN.
- 12. Measurement of bending losses in fibre optic cable

## **Rationale:**

Today's most of the electronically operated devices, integrated circuits, controllers, equipments, gadgets are run by specific drivers/software. To understand design, develop and write drivers programming knowledge is required. To run the devices software has to be user friendly. New approach is to use graphical user interface. Graphical user interface can be implemented using visual software's.

Traditionally visual basic is the most popular, versatile, suitable, simple and commonly used visual programming language to write efficient, compact and portable interfaces, drivers/ software's.

The subject will enable the students to inculcate visual programming concepts and methodology used to write, debug, compile and execute simple visual basic programs using different powerful data types, built in visual controls and integrated visual basic environment (IDE) provided by Microsoft visual studio. Students will be exposed to event driven programming and bottom up approached used in objects oriented programming.

Students will understand how a complex interface can be easily implemented in visual basic with almost no programming expertise.

This course will lay the basic foundation of visual programming which will enable students to develop simple to complex programmable systems interfaces in the real world of work

#### **General Objectives**

Students will able to.

- 1. Learn visual programming development environment, concepts and methodology.
- 2. Use essential components (visual tools ) of Visual software's
- 3. Develop the skill of visual basic programming to build custom standalone applications
- 4. Develop applications with Multiple documents interface (MDI) using common dialog, menus and graphics
- 5. Use ADO for database connectivity with different databases.
- 6. Create simple reports using data report, Seagate crystal reports and integrating it with visual basic
- 7. Develop applications using class modules

# Theory

| Name of Topics                                                                                              | Hours |
|-------------------------------------------------------------------------------------------------------------|-------|
| Topic 1] Introduction to Visual Environment                                                                 |       |
| Specific Objectives:                                                                                        | l     |
| Familiar with IDE of Visual basic                                                                           | l     |
| Use concepts of object based language                                                                       | l     |
| Use basic elements of visual interface                                                                      | l     |
| > Use properties, events and methods at design time and runtime                                             | 00    |
| Create objects, place them on forms                                                                         | 02    |
| Contents:                                                                                                   | l     |
| 1.1 Concepts of visual programming, object, features, properties, methods, events,                          | l     |
| 1.2 Environment of VB – Menu bar, toolbar, project explorer, toolbox, properties                            | l     |
| window form designer form layout immediate window                                                           | l     |
| 1.3 Concept of project elements of projects form their properties methods and events                        | l     |
| Tonic 21 Introduction to Visual Basic                                                                       |       |
| Snecific Objectives.                                                                                        | l     |
| > Use different data types                                                                                  | l     |
| <ul> <li>Use neworful features of arrays and collections</li> </ul>                                         | l     |
| <ul> <li>Use powerrun reactures of arrays and conections</li> <li>Write procedures and functions</li> </ul> | l     |
| Write procedures and functions Call procedures and functions                                                | l     |
| Call procedures and functions Differentiate between procedure and functions                                 | l     |
| Differentiate between procedure and functions Use library for store for moth and store an enditions         | 00    |
| Use library functions for main and string operations                                                        | 02    |
| P Use Inputbox and Misgbox functions                                                                        | l     |
| Contents:                                                                                                   | l     |
| 2.1 Data types, variables, constants, arrays, collections                                                   | l     |
| 2.2 procedures, Arguments, function, return values, control flow statements, loop                           | l     |
| statements, Nested control structures, exit statement                                                       | l     |
| 2.3 Math operators & formulas, logical operators, string functions, special functions                       | l     |
| available in VB like Input Box (), Message Box (), Format ().                                               |       |
| Topic 3] Controls and Events                                                                                | l     |
| Specific Objectives:                                                                                        | l     |
| Use basic controls                                                                                          | l     |
| Select appropriate controls for given data                                                                  | l     |
| Set properties of different basic controls                                                                  | l     |
| Call methods and events of basic controls                                                                   | l     |
| Demonstrate the use of each control with simple examples                                                    | 02    |
| Contents:                                                                                                   | 02    |
| 3.1 Basic controls: Text box, list Box, Combo Box, Scroll Bar, frame, Option button,                        | l     |
| checkbox, command button, OLE controls                                                                      | l     |
| 3.2 File, Drive, directory, Picture box, Image and timer controls .Designing a form                         | l     |
| using controls, concepts of event & properties, changing properties (runtime &                              | l     |
| design time) Important events of each control & creating applications using                                 | l     |
| controls.                                                                                                   | l     |
| Topic 4] Advance Controls & Events                                                                          | <br>I |
| Specific Objectives:                                                                                        | l     |
| $\rightarrow$ Add extrinsic controls in an application                                                      | l     |
| > Use common dialog box control and its properties such open, save as, font.                                |       |
| color, print and help                                                                                       | 03    |
| Use rich text box to design simple ms-word like application                                                 | 1     |
| Use and create explorer like utilities using tree view and list controls                                    | 1     |
| <ul> <li>Familiar with windows common controls</li> </ul>                                                   | 1     |

| Contents:                                                                               |    |
|-----------------------------------------------------------------------------------------|----|
| 4.1 Common Dialog Box controls, The Tree view and List, View controls, the rich         |    |
| textbox controls                                                                        |    |
| 4.2 Windows common controls – status Bar, Tab control, image list control, Important    |    |
| properties, changing properties at design or run time, event handling.                  |    |
| Topic 5] Module, Class Module, Mdi, Menu Graphics                                       |    |
| Specific Objectives:                                                                    |    |
| Write class modules                                                                     |    |
| Define functions and procedures in class module                                         |    |
| Access functions and procedures from class module                                       |    |
| Use multiple document interface                                                         |    |
| Design menu based applications such as notepad editor                                   |    |
| Work with graphic functions and methods                                                 | 03 |
| Contents:                                                                               |    |
| 5.1 Concept of module, class module, using class module to define functions,            |    |
| procedures, variables and accessing them using objects                                  |    |
| 5.2 MDI- MDI form and child form, Creation and use in                                   |    |
| 5.3 Menu: Creating own menu using menu editor, popup menu.                              |    |
| 5.3 Graphics: Basic controls – Line & shape control, line method, circle method, Pset   |    |
| method, RGB () Functions, Paint picture () method, Load picture () function.            |    |
| Topic 6] Database and Report                                                            |    |
| Specific Objectives:                                                                    |    |
| Create database                                                                         |    |
| Use ADO and its properties, methods and events                                          |    |
| Select appropriate concepts such as back-end and front-end                              |    |
| Make database connectivity with different databases                                     |    |
| Generate report using Data Report and Crystal Report                                    |    |
| Contents:                                                                               | 04 |
| 6.1 Concept of database, Record, Record set, Data control & its important properties    | 04 |
| 6.2 validating data, entering data, visual data manager.                                |    |
| 6.3 Programming with ADO ( Active data objects ), using ADO Objects at design time-     |    |
| connection, command, record set, parameter, Creating & closing a connection;            |    |
| executing a command,                                                                    |    |
| 6.4 Using ADO Objects at run time, attaching visual controls to record set at run time, |    |
| Using delete, save, search, update exit, new, add, methods.                             |    |
| 6.5 Report generation using data report and crystal report                              |    |
| Total                                                                                   | 16 |

#### **Teaching and Examination Scheme:**

| Teaching Scheme |    |    |              |    | Examinati | on Scheme |     |       |
|-----------------|----|----|--------------|----|-----------|-----------|-----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH | PR        | OR        | TW  | TOTAL |
|                 |    | 03 |              |    |           |           | 50@ | 50    |

#### **Rationale:**

Most of the diploma holders join industries. Due to globalization and competition in the industrial and service sectors the selection for the job is based on campus interviews or competitive tests.

While selecting candidates a normal practice adopted is to see general confidence, ability to communicate and attitude, in addition to basic technological concepts.

The purpose of introducing professional practices is to provide opportunity to students to undergo activities which will enable them to develop confidence. Industrial visits, expert lectures, seminars on technical topics and group discussion are planned in a semester so that there will be increased participation of students in learning process.

# **Objectives:**

To develop the following skills:

# Intellectual skills:

- 1) Analyze information from different sources.
- 2) Prepare reports.

#### Motor skills:

- 1) Present given topic in a seminar.
- 2) Interact with peers to share thoughts.
- 3) Prepare a report on industrial visit, expert lecture.

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

# INDUSTRIAL TRAINING (OPTIONAL)

# Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

#### **#\* - Online Theory Examination**

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

#### Practical: Skills to be developed:

#### **Intellectual Skills**:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

# **Motor Skills:**

- 1. Presentation Skills
- 2. Use of multi media

# List of Projects:

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds

4. Study of simple ecosystems of ponds, river, hill slopes etc

# Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

#### **Rationale:**

Diploma technician often comes across various types of basic manufacturing processes. He / she is required to select, operate and control the appropriate processes for specific applications. He / she is also required to know about various cutting tools, latest improvements in manufacturing processes. This is a core technology subject. The diploma technician should know how the raw material gets processed through various processes and ultimately results into finished goods.

Hence it is essential that, he has understanding of basic manufacturing processes, machines, tools and equipments. With sound knowledge of this subject, the diploma technician will be able to handle and control practical situations more effectively and confidently.

# **Objectives:**

The student will be able to:

- 1) Use the basic machine tools like lathe and drilling.
- 2) Produce and inspect the job as per specified dimensions.
- 3) Select the specific manufacturing processes for the desired output.
- 4) Adopt safety practices while working on various machines.
- 5) Explain the different types of plastic moulding processes.
- 6) Select the basic manufacturing process for different components to be machined.

# **Practical:**

Skills to be developed:

# Intellectual skills:

- 1) Identify basic manufacturing processes like forging, rolling and extrusion, for required component.
- 2) Specify need of pattern allowances.
- 3) Decide process parameters for different operations.
- 4) Decide tools required for a manufacturing process.
- 5) Identify a joining method for fabrication.

#### **Motor Skills:**

1) Operate lathe, drilling machine.

- 2) Set the tool and select the cutting parameters for machining operations.
- 3) Set the tools, job and decide cutting parameters.
- 4) Inspect various dimensions of jobs by using measuring instruments.
- 5) Make simple wooden / thermocole pattern.

# List of Practical:

- 1) One turning job on lathe containing the operations like plain turning, step turning, taper turning, grooving, knurling and chamfering.
- 2) One job using Spot welding machine. (Min. 4 spots on 0.5-1mm thick metal strip.)
- 3) One simple job on TIG / MIG welding setup or visit to TIG / MIG welding shop.
- 4) Moulding practice for any one pattern.
- 5) Industrial visit to observe plastic processing shop and report on the visit.
- 6) One composite job containing the operations like lathe with axial & across drilling (like Nut- Bolt assembly or any other equivalent job).
- 7) Demonstration of eccentric turning using four jaw chuck.

#### Notes:

- 1] The workshop instructors should prepare specimen job in each shop as demonstration practice before the student (as per the drawing given by subject teacher/ workshop superintendent).
- 2] Theory behind practical is to be covered by the concerned subject teacher/ workshop superintendent.
- 3] Workshop diary should be maintained by each student duly signed by respective shop instructors.
- 4] Assignments are to be assessed by the concerned subject teacher/ workshop superintendent.

# **Guidelines for conducting Practical Examination for MANUFACTURING PROCESSES**

- 1. The job drawing must be jointly decided by the External and Internal examiner prior to one day in advance from the commencement of practical examination. Every student should be supplied the copy of job drawing before examination.
- 2. Time for practical examination should be **THREE HOURS.**
- 3. Practical examination of the students shall consists of Turning job containing different operations like Facing, straight Turning, Taper turning, Chamfering, Knurling, Threading, Grooving. (Minimum 5 operations) Students will perform the job as per the drawing provided to them.
- 4. Raw material size Bar dia. 40 to 50 mm, length 80 to 100 mm.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

This subject is introduced with intention to teach students of mechanical branch facts, concepts, principles and procedure of operating electrical machines, circuits and systems and their applications. This subject is most important in regards to selection of electrical drives for various applications and will provide sufficient knowledge about electrical machines, equipments used in industry/field. This subjects deals with measurements of electrical quantities to judge the performance of electrical machines

#### **General Objectives:**

Student will be able to:

- 1. Differentiate between a.c. and d.c. supply.
- 2. Identify different type's motors, transformers and drives.
- 3. Select suitable drive as per the requirements.
- 4. Understand various types of electric heating and welding operations in manufacturing processes.
- 5. Supervise routine maintenance of electrical machines and supply systems.
- 6. Use the tariff system.
- 7. Calculate energy requirements and cost of energy.

# Theory:

| Topic and Content                                                                                 | Hours | Marks |
|---------------------------------------------------------------------------------------------------|-------|-------|
| 1. Introduction to Electric Power System and A. C. Supply 20 Marks                                |       |       |
| Specific Objectives:                                                                              |       |       |
| Student will be able to :                                                                         |       |       |
| State various components of power system.                                                         |       |       |
| Distinguish between a.c. and d.c. supply.                                                         |       |       |
| Calculate electrical quantities of a.c. supply and circuit parameters of R-L                      |       |       |
| <ul> <li>Calculate line and phase quantities and various powers in three phase circuit</li> </ul> |       |       |
| Contents: Introduction 04 Marks                                                                   |       |       |
| 1.1 Electrical power supply system generation, transmission, distribution. AC supply & DC Supply  | 10    | 20    |
| AC Fundamentals: 08 Marks                                                                         |       |       |

## Skills to be developed for practical:

#### **Intellectual skills**

#### Student will be able to:

- 1. Identify and give specifications of electrical motors and transformers.
- 2. Interpret wiring diagrams for various applications.
- 3. Identify safety equipments required.
- 4. Decide the procedure for setting experiments.

#### Motor skills:

#### Student will be able to:

- 1. Draw wiring diagram
- 2. Make wiring connections to connect electrical equipments and instruments.
- 3. Measure electrical power, earthing resistance and other electrical quantities.
- 4. Calibrate electrical instruments.
- 5. Use of safety devices while working.
- 6. Prepare energy consumption bill with present tariff structure.

#### **List of Practical:**

- 1. Know your electrical laboratory.
- 2. Find the performance of R-L series circuit with single phase A.C. supply and determine the current, power and power factor.
- 3. Find the performance of R-C series circuit with single phase A.C. supply and determine the current, power and power factor.
- 4. Verify the relationship between line and phase values of voltages and currents in three phase balanced star and delta connected load.

- 5. Determine efficiency and single phase transformer at no load, half load and full load by conducting load test.
- 6. Determination of slip of three phase induction motor by use of tachometer at no load and full load.
- 7. Observe the change in direction of rotation of three phase induction motor by changing the phase sequence R-Y-B
- 8. Prepare switch board for two lamps, one fan, one fan regulator and one 5 ampere socket.
- 9. Connect single phase energy meter in simple lamp circuit for measurement of energy consumption for one hour.
- 10. Search fault in faulty machines or installation.
- 11. Demonstration of servo motor and stepper motor.

# [Note: Practicals 1 to 9 shall be performed by 2 students and practical 10 in a group of 4 students]

# Assignment:

- 1. **Industrial visit:** Visit to show various motors, electrical devices, accessories used in mechanical industrial applications like dairy, crushers, dall mill, oil mill or small scale unit. [The group size is as suggested by industry]
- 2. Detail study of electrical motors manufacture's catalogues to study mounting installation, frame work, coupling, rotor inertia etc. [To be performed individually]

# NOTE: All Practicals and assignment are compulsory and should be considered in assessment formats A1, A2 And So On.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Mechanical Engineers have to work with various power producing & power absorbing devices like Boilers, Turbines, Compressor, I.C. Engines, and Pumps etc. In order to understand the principles, construction and working of the devices, it is essential to understand the concept of energy, work, heat and conversion between them.

The subject is a related to Power Engineering and other related subjects in which the application of fundamental concepts of Thermal Engineering are included.

#### **General Objectives:**

The Student will be able to:

- 1. Define fundamental concepts of thermodynamics to thermodynamic systems.
- 2. Use various laws of thermodynamics.
- 3. Apply various gas laws and ideal gas processes to various thermodynamic systems.
- 4. Draw the construction and explain working of boilers, turbines & condensers.
- 5. Find properties of two phase system from steam table / mollier charts
- 6. State the various modes of heat transfer.

# **Theory Content:**

| Topic and Contents                                                                                                                                                                                                                                               | Hours | Marks |

| Specif  | fic objectives:                                                                                                               |    |     |
| >       | Describe various modes of heat transfer.                                                                                      |    |     |
| $\succ$ | Describe construction and working of different types of Heat                                                                  |    |     |
|         | exchangers.                                                                                                                   |    |     |
| Conter  | nts                                                                                                                           |    |     |
| 6.1     | Modes of heat transfer: - Conduction, convection and radiation.                                                               |    |     |
|         | Conduction :- 08 Marks                                                                                                        | 10 | 16  |
|         | Fourier's law, thermal conductivity, conduction through cylinder,                                                             | 10 | 10  |
|         | thermal resistance, composite walls (Simple numerical) 04 Marks                                                               |    |     |
| 6.2     | Radiation:- Thermal Radiation, Absorptivity, Transmissivity,                                                                  |    |     |
|         | Reflectivity, Emissivity, black and gray bodies, Stefan-Boltzman law.                                                         |    |     |
|         | 04 Marks                                                                                                                      |    |     |
| 6.3     | Heat Exchangers: - Classification, Construction and working of Shell                                                          |    |     |
|         | and tube, shell and coil and pipe in pipe type, plate type heat exchanger                                                     |    |     |
|         | and its applications.                                                                                                         |    |     |
|         | Total                                                                                                                         | 64 | 100 |

#### **Practical:** Skills to be developed: **Intellectual Skills:**

- 1. Explain various concepts and fundamentals of thermodynamics.
- 2. **Explain** vapour processes, principle of working of steam boilers and function of different mountings and accessories.
- 3. Draw construction and explain working of steam turbines and condensers.
- 4. **State the various** modes of heat transfer and concept of heat exchanges.
- 5. Interpret steam tables, Mollier chart and relationship between different thermodynamic properties.
- 6. List different sources of energy and their applications

# Motor Skills:

- 1. Trace path of flue gases and water steam circuit in a boiler.
- 2. Collect information and write report on boiler and its mounting and accessories.
- 3. Conduct trial on the setup for calculation of thermal conductivity of metal rod
- 4. Collect information and write technical specifications of photovoltaic cells and identify different components on panels of photovoltaic cells.
- 5. Report writing on presentation given on Renewable sources of energy.

# List of Practicals:

- 1. Trace and draw the path of Flue Gases and water Steam circuit with the help of models of 'Babcock & Wilcox' and 'La-Mont' Boiler or any other similar model available in the laboratory.
- 2. Draw and understand working of various types of Boiler Mountings and Accessories.
- 3. Prepare a report on visit to Sugar Factory/ Steam Power Plant/ Dairy industry with specification of boiler and list of mountings and accessories along with their functions.
- 4. Draw the sketches of impulse and reaction turbines; describe their working and differences through a cut section model or a working model. Focus should be on the use for electrical power generation.
- 5. Draw a Neat sketch and understand working of Jet Condenser. Component must be labeled. State function of components and material used.
- 6. Calculate the thermal conductivity for a given sample of solid metallic rod.
- 7. Classify heat exchangers and write their descriptions. Observe the various heat exchangers available in laboratory with their specifications.
- 8. Mini project: Student will prepare individually a report on Renewable sources of energy and make power point presentation on the following.
  - a) Solar water heating system
  - b) Photo voltaic cells
  - c) Bio gas, Bio mass and Bio Diesel as a fuel
  - d) Wind, Tidal and Geothermal Energy

[Assignments to be completed in a group of (max.) four students. The topics should be distributed in the groups.]

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Knowledge of fluid properties, fluid flow & fluid machinery is essential in all fields of engineering. Hydraulic machines have important role in water supply, irrigation, power generation and also in most of the engineering segments. This subject requires knowledge of basic engineering sciences, applied mechanics, mathematics etc. The fundamentals of this subject are essential for the subject "Industrial Fluid Power" in sixth semester.

#### General Objectives: The student will be able to

- 1) Define various properties of fluids
- 2) Measure pressure, velocity and flow rate using various instruments.
- 3) State continuity equation, Bernoulli's equation and its applications.
- 4) Estimate various losses in flow through pipes.
- 5) Explain concept of impact of jet on various types of vanes.
- 6) Draw the construction, working of hydraulic pumps and turbines.
- 7) Evaluate performance of turbines and pumps.

### **Learning Structure:**

# Practical: Skills to be developed: Intellectual Skills:

1) Select appropriate flow and pressure measuring devices for a given situation.

2) Analyze the performance of pumps and turbines.

# **Motor Skills:**

- 1) Use flow and pressure measuring devices.
- 2) Operate pumps and turbines.

# **List of Practicals:**

- 1. Measure water pressure by using Bourdon's pressure gauge and U-tube Manometer. Also measure discharge of water by using measuring tank and stop watch.
- 2. Calibrate Bourdon's pressure gauge with the help of Dead weight pressure gauge.
- 3. Verify Bernoulli's theorem.
- 4. Determine Coefficient of Discharge of Venturimeter.
- 5. Determine coefficient of Discharge, Coefficient of Contraction and Coefficient of Velocity of Sharp edged circular orifice.
- 6. Determine Darcy's friction factor 'f' in pipes of three different diameters for four different discharges.
- 7. Determine minor frictional losses in pipe fittings.
- 8. Determine overall efficiency of Pelton wheel by using Pelton wheel test rig.
- 9. Determine overall efficiency of Centrifugal Pump & plot its operating characteristics by using Centrifugal pump test rig.
- 10. Determine overall efficiency of Reciprocating pump by using Reciprocating Pump test rig.

# Assignments

1. Information collection of Centrifugal, reciprocating, multistage pumps and submersible pumps from local market and from internet. Comparison of various models manufactured by different manufacturers. [The market survey is to be completed in a group of (max.) three to four students and the report of the same is to be included as part of term work.]

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

It is a core technology subject in Mechanical Engineering Discipline. Mechanical Engineers often come across various machines in practice. They should be able to identify and interpret various elements of machines in day to day life. In maintaining various machines, a diploma engineer should have sound knowledge of fundamentals of machine and mechanism. It will be helpful for them to understand the mechanisms from operational point of view in a better way. This subject imparts the kinematics involved in different machine elements and mechanisms like gear, cam-follower, follower, belt-pulley, flywheel, brake, dynamometer, clutch, etc.

Detailed knowledge of these aspects with deep insight into the practical applications develops a professional confidence in them to become successful Engineer.

This subject serves as a prerequisite for subjects like Machine Design to be learned in higher semester.

#### **General Objectives:**

#### The student will be able to:

- 1. Understand different machine elements and mechanisms.
- 2. Understand Kinematics and Dynamics of different machines and mechanisms.
- 3. Draw cam profile suitable to various displacement diagram.
- 4. Select Suitable Drives and Mechanisms for a particular application
- 5. Understand the function, operation and application of flywheel and governor.
- 6. Understand the function, operation and application of brake, dynamometer, clutch and bearing
- 7. Find magnitude and plane of unbalanced forces.

#### Practicals: Skills to be developed:

# Intellectual Skills:

- 1. Determine velocity and acceleration of links in a given mechanism.
- 2. Analyze balancing of rotating masses in a single plane.
- 3. Interpret interrelationship between components of various braking mechanisms.
- 4. Compare various power transmission devices.

# Motor Skills:

- 1. Drawing of velocity and acceleration diagrams.
- 2. Dismantle and assemble given brakes and clutches.
- 3. Draw cam profiles for a given application
- 4. Draw velocity and acceleration diagram of the given mechanisms
- 5. Draw force polygon for unbalanced masses revolving in same plane

**Note -** The Term work shall consist of Journal / lab manual and A-3 size sketch book.

# List of Practical:-

- 1. Sketch and describe working of quick return mechanism for a shaper. Find the ratio of time of cutting stroke to the return stroke to understand quick return motion in shaping operation.
- 2. Sketch and describe the working of the following mechanisms with its application,
  - a) Bicycle free wheel sprocket mechanism
  - b) Geneva mechanism
  - c) Ackerman's steering gear mechanism
  - d) Foot operated air pump mechanism
- 3. Determine velocity and acceleration of various links of the given two mechanism, by relative velocity method for analysis of motion of links.
- 4. Determine velocity and acceleration in an I. C. engine's slider crank mechanism by Kleins's construction.
- 5. Draw the profile of a radial cam for the given follower type to obtain the desired follower motion.
- 6. Determine slip, length of belt, angle of contact in an open belt drive to understand its performance.
- 7. Draw a schematic diagram of centrifugal governor and describe its working. Draw a graph between radius of rotation versus speed of governor to understand its function.

- 8. Dismantle and assemble mechanically operated braking mechanism of two wheelers. Sketch the two wheeler braking system and identify the functions of various components.
- 9. Dismantle and assemble multi-plate clutch of two wheeler. Draw neat sketch and state the functions of various components.
- 10. Determine graphically counterbalance mass and its direction for complete balancing of a system of several masses rotating in a single plane.

#### **Learning Resources:**

Course Name : Mechanical Engineering Group Course Code : AE/ME/PG/PT/MH/MI Semester : Fourth Subject Title : Professional Practices-II

Subject Code : 17035

# **Teaching and Examination Scheme:**

| Teaching Scheme |    |    |              | Examinati | on Scheme |    |     |       |
|-----------------|----|----|--------------|-----------|-----------|----|-----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH        | PR        | OR | TW  | TOTAL |
|                 |    | 02 |              |           |           |    | 50@ | 50    |

# **Rational:**

The purpose of introducing Professional practices is to fulfill the need of students to stand in today's global market with knowledge and confidence. This can be achieved by arranging industrial visits, expert lectures attitude to present them-selves, get alternative solutions and validation of the selected alternatives, socially relevant activities, and modular courses. Professional Practices is helpful in broadening technology base of students beyond curriculum. Model making exercises allow students to think more creatively and innovatively and inculcating habit of working with their own hands. Modular courses are introduced with a view of learning and acquiring higher technology skills through industry experts and consultants from the respective fields.

#### **Objectives:**

The student will be able to:

- 1) Acquire information from different sources.
- 2) Prepare notes for given topics.
- 3) Present seminar using power projection system.
- 4) Interact with peers to share thoughts.
- 5) Work in a team and develop team spirit.

#### **Intellectual Skill:**

Student will be able to:

- 1) Search information from various resources.
- 2) Prepare notes on selected topics.
- 3) Participate in group discussions.

#### **Motor Skills:**

- 1) Observe industrial practices during visits.
- 2) Prepare slides / charts for presentation in seminar.
- 3) Develop a model

#### **Learning Structure:**

#### **Content:**

| Topic & Content                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |    |  |

| v)              | Hydraulic pumps -Types, working, & applications.                                       |    |  |  |
| vi              | Sensors -Types, principle, & applications.                                             |    |  |  |
| vii             | ) Super conductor technology - Types, principle, & applications.                       |    |  |  |
| vii             | i) Semi conductors Types, materials, & applications.                                   |    |  |  |
| ix              | Industrial breaks- Types, construction, working, & applications.                       |    |  |  |

| 4. Industrial Visits                                                                       |    |  |  |  |
|--------------------------------------------------------------------------------------------|----|--|--|--|
| Specific objectives: at the end of this chapter student will able to;                      |    |  |  |  |
| 1] Identify and select proper industry for observing new machines and                      |    |  |  |  |
| Technologies                                                                               |    |  |  |  |
| 2] To collect information about various aspects of industry like Plant layout,             |    |  |  |  |
| Production processes, Quality control, Inventory control etc.                              |    |  |  |  |
| 3] Observe the human resource, managers and workers their style of working,                |    |  |  |  |
| Discipline, work culture etc and reproduce in the form of report.                          |    |  |  |  |
| Structured industrial visits be arranged and report of the same shall be submitted by each |    |  |  |  |
| student to form a part of the term work                                                    |    |  |  |  |
| No of visits- At least one                                                                 |    |  |  |  |
| Scale of industry- medium scale unit large scale unit                                      |    |  |  |  |
| Group size- practical batch                                                                |    |  |  |  |
| Report-not exceeding 7 to 10 pages.                                                        |    |  |  |  |
| Purpose :                                                                                  |    |  |  |  |
| $\succ$ To study the profile of industry                                                   |    |  |  |  |
| > To see the advanced manufacturing processes & machinery.                                 |    |  |  |  |
| > To observe working of CNC machines, work centre's ,flexible manufacturing                |    |  |  |  |
| systems                                                                                    | 04 |  |  |  |
| ➢ To observe working in foundry, forging shop, press shop, heat treatment shop etc.        |    |  |  |  |
| To observe chip less manufacturing machines & processes.                                   |    |  |  |  |
| > To study process sheets , quality control charts & production drawings, metallurgical    |    |  |  |  |
| testing laboratory                                                                         |    |  |  |  |
| To observe Tool room, standards room etc.                                                  |    |  |  |  |
|                                                                                            |    |  |  |  |
| Following types of industries may be visited in & around the institute.                    |    |  |  |  |
| 1) Foundry                                                                                 |    |  |  |  |
| 11) Forging units                                                                          |    |  |  |  |
| iii) Sheet metal processing unit                                                           |    |  |  |  |
| iv) Machine/ Automobile component manufacturing unit                                       |    |  |  |  |
| v) Factication unit powder metanurgy component manufacturing unit.                         |    |  |  |  |
| vi) Machine tool manufacturing unit.                                                       |    |  |  |  |
| industries                                                                                 |    |  |  |  |
| viji) Auto workshon / four wheeler garage                                                  |    |  |  |  |
| ix) City water supply pumping station                                                      |    |  |  |  |
| x) Hydro electric power plant.                                                             |    |  |  |  |
| xi) Wind mills, Solar Park                                                                 |    |  |  |  |

| 5. Socially Relevant Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |    |

Note:

The students who wish to undergo in plant training shall go through details regarding it in the syllabus of Professional Practices – III for fifth semester and complete the training in summer vacation at the end of fourth semester examination.

All such students will be assessed out of ten marks as per guidelines mentioned in the curriculum of professional practice III in the fifth semester

**Learning Resources:** 

1. Books:

Industrial Training (Optional) after 4<sup>th</sup> semester examination. Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

#### **INDUSTRIAL TRAINING (OPTIONAL)**

#### **Rational:-**

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment.
- 2. Know key issues about environment.
- 3. Understands the reasons for environment degradation.
- 4. Know aspects about improvement methods.
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation.

#### Practical: Skills to be developed:

# Intellectual Skills:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

# Motor Skills:

- 1. Presentation Skills
- 2. Use of multi media

# List of Projects:

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds

4. Study of simple ecosystems of ponds, river, hill slopes etc.

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

# NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

### **Rationale:**

Human biology is a core subject to understand the anatomy & physiology of human body. Each system of the human body is explained step by step, in different chapters. Human Biology is a prerequisite for all subjects of Medical Electronics.

# **General Objectives:**

Students will be able to:

- 1) Understand structure and functions of cell and tissues.
- 2) Understand the origin of bioelectric signals.
- 3) Learn the compositions and structures of Human body organs.
- 4) Gain knowledge about the functioning of organs and system.

# **Learning Structure:**

# **Practical:**

# Intellectual Skills:-

- 1. Know the function of various organs
- 2. Know the function of various equipment

# **Motor Skills:**

- 1. Set up blood testing instruments
- 2. Handle the microscope.

# **List of Practicals:**

- 1. Observation of cell structure using microscope.
- 2. Counting of RBC using microscope.
- 3. Counting of WBC using microscope
- 4. Determination of Blood group
- 5. Measurement of Hemoglobin using Sahalie's Technique.
- 6. Measurement of Blood pressure using sphygmomanometer.
- 7. Measurement of bleeding time.
- 8. Measurement of clotting time.

# List of Assignments:

Teachers should assign questions for following topics. For that demonstrate various live/modelled organ/videos/charts and visit medical college/hospital.

- 1. Cardiovascular
- 2. Respiratory
- 3. Digestive
- 4. Urinary
- 5. Nervous

### List of Equipments:

- 1. Sphygmomanometer
- 2. Sahalie's haemoglobinometer
- 3. Microscope

(Some practicals can be performed in pathology laboratories or science college laboratory)

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

The Concept of global village has become reality only due to advancement in communication technology. In India communication has developed by leaps and bounds in last two decades. We are witness to the mobile and television revolution. In this Scenario, diploma passed out students should be aware about the principles, procedure and application of communication techniques, so that they can face the technological changes happening due to globalization & competition. The upcoming field of telemedicine and telemetry in biomedical sector, communication plays a vital role. The knowledge of this subject will help students to handle and operate different communication system.

#### **General Objectives**

After Studying this subject the students will be able to

- 1. Describe various communication systems.
- 2. Compare various types of modulation techniques.
- 3. Understand concept about the digital communication, multiplexing techniques and encoding techniques.
- 4. Understand basic fundamentals in satellite, mobile and data communication.
- 5. Understand applications of communication in telemetry and telemedicine.

#### Practical's:

Skills to be developed:

### **Intellectual Skills**

- 1. Interpretation of result.
- 2. Selection of communication techniques based on application.

### **Motor Skills**

- 1. Make connections/arrange experimental set up carryout the tests.
- 2. Ability to observe and record out puts.
- 3. Draw waveform /graphs.
- 4. Locate Faults.

#### List of Experiments:

- 1. Measurement of modulation index of amplitude modulated wave and observe the effect of modulating signal voltage on it by Emitter / Base / Collector Modulation.(any one circuit)
- 2. Measurement of modulation index of the frequency modulated wave and observe the effect of modulating and Carrier signal voltage on Frequency Modulation.(construct the circuit by using IC8038)
- 3. Generate PAM and draw input / output waveform and measure amplitude of each pulse.
- 4. Generate PWM and draw input / output waveform and measure Width of each pulse.
- 5. Generate ASK Signal and draw input/output waveforms.
- 6. Generate FSK Signal and draw input/output waveforms.
- 7. Generate PSK Signal and draw input/output waveforms.
- 8. Generate PCM Signal and draw input/output waveforms.
- 9. Generate PPM Signal and draw input/output waveforms.
- 10. Study the single channel telemetry system.

#### List of Assignments

#### Teacher should assign two or three questions on each of the following topic.

- 1. Digital Image communication in hospitals(DICOM)
- 2. Satellite communication- India's progress.
- 3. Mobile communication.
- 4. Graphical Representation of digital data by using the different encoding Techniques.

### Learning Resources

Course Name: Diploma in Medical ElectronicsCourse Code: MUSemester: FourthSubject Title: BiosensorsSubject Code: 17442

#### **Teaching and Examination Scheme:**

| Teaching Scheme |    |    | Examination Scheme |     |     |    |     |       |
|-----------------|----|----|--------------------|-----|-----|----|-----|-------|
| TH              | TU | PR | PAPER<br>HRS       | TH  | PR  | OR | TW  | TOTAL |
| 03              |    | 02 | 03                 | 100 | 25# |    | 25@ | 150   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work. (SW)

#### Rationale

Human body generates different physiological signals which are further electronically processed for diagnosis, monitoring, or therapeutic patient management.

This subject deals with the acquisition of bio signals from human body using various transducers/ sensors and processing of these signals.

This subject, Biosensors is the pre-requisite for all the subjects related to patient's management in the respect of diagnosis monitoring and therapy.

#### **General Objectives**

Students will be able to

- 1. Understand the design principle of physiological electrodes & transducer.
- 2. Understand working principle of these electrodes & transducers.
- 3. Understand different electrodes & transducers for various applications.

### **Learning Structure**

### **Theory Contents:**

### **Practicals:**

Skills to be developed:

#### **Intellectual skills**

- 1. Select transducer for particular application.
- 2. Interpret the characteristics of transducer.

#### **Motor Skills**

- 1. Measure the parameters accurately.
- 2. Plot the characteristics of transducer.

#### List of Experiments:

- 1) Characteristics of Potentiometer Linear & Angular
- 2) Characteristics of LVDT
- 3) Characteristics of Strain Gauge/determination of pressure using strain gauge.
- 4) Characteristics of Thermistor
- 5) Characteristics of RTD
- 6) Characteristics of Thermocouple
- 7) Determination of pH level of the given solutions
- 8) Amplification of bio signals (simulated) using an Instrumentation Amplifier/ Differential Amplifier
- 9) Determine the blood flow using ultrasonic flow transducer
- 10) Determination of pressure using Piezoelectric/Capacitive transducer

#### List of Assignments:

Information search (manufacturers, technical specifications, applications, costing etc.) on

- Different types of electrodes
- Fibre optic transducer
- Diaphragms, ,Bellows, Bourdon tube

#### List of Equipments:

- 1) Potentiometer linear & angular Set up
- 2) LVDT Set up
- 3) Strain gauge Set up

#### MSBTE - Final Copy Dt. 30/08/2013

- 4) Thermistor Set up
- 5) RTD Set up
- 6) Thermocouple Set up
- 7) pH meter Set up
- 8) Biosignals simulator & an instrumentation amplifier/differential amplifier
- 9) Ultrasonic flow transducer Set up
- 10) Piezoelectric/capacitive transducer Set up

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Modern age technology has developed on high density and high speed electronics circuits. Integrated circuits are basis of these high density circuits enabled to reduce size, weight and cost of equipments. They have intrinsic features such as low power consumption, low noise and ease of design.

Today the growth of any industry depends upon electronics to great extent. Contents of this subject are the basic building blocks of different analog circuits.

Basic operating and designing principle of such a large collection of circuits establishes a foundation for understanding new development in the electronics field, instrumentation and power control. This subject acquaints student with general analog principles and design methodologies using integrated circuit for system design.

Prerequisites various devices and circuits studied in elements of electronics and electronic devices and circuits. Prospects - LSI, MSI, VLSI.

#### **General Objectives:**

Students will be able to:

- Understand working principle of Op-Amp and IC555
- Develop electronics circuits using timer IC555 and Op-Amp

• Analyze the response of frequency selective circuits such as PLL with respect to the incoming signal.

### **Learning Structure:**

#### **Application:**

### **Contents: Theory**

### Practical:

#### **Intellectual Skills:**

- 1. Interpret the waveforms.
- 2. Find faults in circuits.

#### Motor Skill:

1. Testing and Measurement.

### **List of Practicals:**

| Sr. No. | Title of the Experiment                                                                 |
|---------|-----------------------------------------------------------------------------------------|
|         | Determine the op-amp parameters:                                                        |
| 01      | • Input Offset Voltage (V <sub>io</sub> )                                               |
| 01      | • Output Offset Voltage (V <sub>oo</sub> )                                              |
|         | Common mode rejection ratio (CMRR)                                                      |
| 02      | Determine the gain of Inverting and Non-inverting amplifier using op-amp and            |
| 02      | compare it with theoretical gain.                                                       |
| 03      | Verify the operation of Adder and Subtractor circuit using op-amp IC 741.               |
|         | Verify the working of active integrator and differentiator circuits using op-amp IC 741 |
|         | for following inputs:                                                                   |
| 04      | • Sine waveform                                                                         |
|         | • Square waveform                                                                       |
|         | Rectangular waveform                                                                    |
| 05      | Assemble V to I converter and I to V converter using IC 741 and measure the             |
| 05      | respective output.                                                                      |
|         | Verify the working of following comparator circuits using op-amp IC 741 and draw the    |
| 06      | input-output waveforms                                                                  |
| 00      | • Zero crossing detector                                                                |
|         | Active peak detector                                                                    |
| 07      | Assemble first order low pass Butterworth filter using op-amp and plot the frequency    |
| 07      | response and determine its cutoff frequency.                                            |
| 08      | Assemble Astable multivibrator circuit using IC 741. Plot the output waveform and       |
| 00      | determine the frequency of oscillations and duty cycle.                                 |
| 09      | Assemble Monostable multivibrator circuit using IC 555. Plot the output waveform        |
| 07      | and determine the on-time.                                                              |
| 10      | Assemble Schmitt trigger circuit using IC 555. Plot the output waveform and             |

#### w.e.f Academic Year 2012-13

|    | determine UTP and LTP                                                             |
|----|-----------------------------------------------------------------------------------|
| 11 | Assemble Instrumentation amplifier circuit using IC 324 and determine the overall |
|    | gain.                                                                             |
| 12 | Verify the operation of frequency Multiplier using PLL IC 565 and determine the   |
|    | output frequency.                                                                 |

**Course Name : Electronics Engineering and Video Engineering Group** 

Course Code : ET/EJ/IE/IS/EN/EX/IC/MU/EV/DE/IU/ED/EI

Semester : Fourth

Subject Title : Visual Basic

Subject Code : 17043

#### **Teaching and Examination Scheme**:

| Teac | Teaching Scheme Examination Scheme |    |              |    |    |    |     |       |
|------|------------------------------------|----|--------------|----|----|----|-----|-------|
| TH   | TU                                 | PR | PAPER<br>HRS | TH | PR | OR | TW  | TOTAL |
| 01   |                                    | 02 |              |    |    |    | 25@ | 25    |

#### **Rationale:**

Today's most of the electronically operated devices, integrated circuits, controllers, equipments, gadgets are run by specific drivers/software. To understand design, develop and write drivers programming knowledge is required. To run the devices software has to be user friendly. New approach is to use graphical user interface. Graphical user interface can be implemented using visual software's.

Traditionally visual basic is the most popular, versatile, suitable, simple and commonly used visual programming language to write efficient, compact and portable interfaces, drivers/ software's.

The subject will enable the students to inculcate visual programming concepts and methodology used to write, debug, compile and execute simple visual basic programs using different powerful data types, built in visual controls and integrated visual basic environment (IDE) provided by Microsoft visual studio. Students will be exposed to event driven programming and bottom up approached used in objects oriented programming.

Students will understand how a complex interface can be easily implemented in visual basic with almost no programming expertise.

This course will lay the basic foundation of visual programming which will enable students to develop simple to complex programmable systems interfaces in the real world of work

#### **General Objectives**

Students will able to.

- 1. Learn visual programming development environment, concepts and methodology.
- 2. Use essential components (visual tools ) of Visual software's
- 3. Develop the skill of visual basic programming to build custom standalone applications
- 4. Develop applications with Multiple documents interface (MDI) using common dialog, menus and graphics
- 5. Use ADO for database connectivity with different databases.
- 6. Create simple reports using data report, Seagate crystal reports and integrating it with visual basic
- 7. Develop applications using class modules

### **Learning Structure:**

### Theory

| Name of Topics                                                                            | Hours |
|-------------------------------------------------------------------------------------------|-------|
| Topic 1] Introduction to Visual Environment                                               |       |
| Specific Objectives:                                                                      |       |
| Familiar with IDE of Visual basic                                                         |       |
| Use concepts of object based language                                                     |       |
| > Use basic elements of visual interface                                                  |       |
| > Use properties, events and methods at design time and runtime                           | 00    |
| > Create objects, place them on forms                                                     | 02    |
| Contents:                                                                                 |       |
| 1.1 Concepts of visual programming, object, features, properties, methods, events.        |       |
| 1.2 Environment of VB – Menu bar, toolbar, project explorer, toolbox, properties          |       |
| window, form designer, form layout, immediate window.                                     |       |
| 1.3 Concept of project, elements of projects, form, their properties, methods and events. |       |
| Topic 2] Introduction to Visual Basic                                                     |       |
| Specific Objectives:                                                                      |       |
| > Use different data types                                                                |       |
| Use powerful features of arrays and collections                                           |       |
| > Write procedures and functions                                                          |       |
| > Call procedures and functions                                                           |       |
| > Differentiate between procedure and functions                                           |       |
| > Use library functions for math and string operations                                    | 02    |
| Use Inputbox and Msgbox functions                                                         |       |
| Contents:                                                                                 |       |
| 2.1 Data types, variables, constants, arrays, collections                                 |       |
| 2.2 procedures, Arguments, function, return values, control flow statements, loop         |       |
| statements, Nested control structures, exit statement                                     |       |
| 2.3 Math operators & formulas, logical operators, string functions, special functions     |       |
| available in VB like Input Box (), Message Box (), Format ().                             |       |
| Topic 3] Controls and Events                                                              |       |
| Specific Objectives:                                                                      |       |
| Use basic controls                                                                        |       |
| Select appropriate controls for given data                                                |       |
| > Set properties of different basic controls                                              |       |
| Call methods and events of basic controls                                                 |       |
| > Demonstrate the use of each control with simple examples                                | 02    |
| Contents:                                                                                 |       |
| 3.1 Basic controls: Text box, list Box, Combo Box, Scroll Bar, frame, Option button,      |       |
| checkbox, command button, OLE controls                                                    |       |
| 3.2 File, Drive, directory, Picture box, Image and timer controls .Designing a form using |       |
| controls, concepts of event & properties, changing properties (runtime & design           |       |
| time) Important events of each control & creating applications using controls.            |       |
| Topic 4] Advance Controls & Events                                                        |       |
| Specific Objectives:                                                                      |       |
| Add extrinsic controls in an application                                                  |       |
| Use common dialog box control and its properties such open, save as, font,                |       |
| color, print and help                                                                     | 03    |
| Use rich text box to design simple ms-word like application                               |       |
| Use and create explorer like utilities using tree view and list controls                  |       |
| Familiar with windows common controls                                                     |       |
| Contents:                                                                                 |       |

| Total                                                                                   | 16 |
|-----------------------------------------------------------------------------------------|----|
| 6.5 Report generation using data report and crystal report                              |    |
| Using delete, save, search, update exit, new, add, methods.                             |    |
| 6.4 Using ADO Objects at run time, attaching visual controls to record set at run time, |    |
| executing a command,                                                                    |    |
| connection, command, record set, parameter, Creating & closing a connection;            |    |
| 6.3 Programming with ADO ( Active data objects ), using ADO Objects at design time-     |    |
| 6.2 validating data, entering data, visual data manager.                                |    |
| 6.1 Concept of database, Record, Record set, Data control & its important properties    | 04 |
| Contents:                                                                               |    |
| <ul> <li>Generate report using Data Report and Crystal Report</li> </ul>                |    |
| <ul> <li>Make database connectivity with different databases</li> </ul>                 |    |
| <ul> <li>Select appropriate concepts such as back-end and front-end</li> </ul>          |    |
| <ul> <li>Use ADO and its properties methods and events</li> </ul>                       |    |
| Specific Objectives:                                                                    |    |
| 1 opic of Database and Report                                                           |    |
| method, RGB () Functions, Paint picture () method, Load picture () function.            |    |
| 5.3 Graphics: Basic controls – Line & shape control, line method, circle method, Pset   |    |
| 5.3 Menu: Creating own menu using menu editor, popup menu.                              |    |
| 5.2 MDI- MDI form and child form, Creation and use in                                   |    |
| procedures, variables and accessing them using objects                                  |    |
| 5.1 Concept of module, class module, using class module to define functions,            |    |
| Contents:                                                                               |    |
| > Work with graphic functions and methods                                               | 03 |
| Design menu based applications such as notepad editor                                   |    |
| <ul> <li>Use multiple document interface</li> </ul>                                     |    |
| <ul> <li>Access functions and procedures from class module</li> </ul>                   |    |
| <ul> <li>Define functions and procedures in class module</li> </ul>                     |    |
| Specific Objectives:                                                                    |    |
| Topic 5] Module, Class Module, Mdi, Menu Graphics                                       |    |
| properties, changing properties at design or run time, event handling.                  |    |
| 4.2 Windows common controls – status Bar, Tab control, image list control, Important    |    |
| textbox controls                                                                        |    |
| 4.1 Common Dialog Box controls, The Tree view and List, View controls, the rich         |    |

#### **Rationale:**

Most of the diploma holders join industries. Due to globalization and competition in the industrial and service sectors the selection for the job is based on campus interviews or competitive tests.

While selecting candidates a normal practice adopted is to see general confidence, ability to communicate and attitude, in addition to basic technological concepts.

The purpose of introducing professional practices is to provide opportunity to students to undergo activities which will enable them to develop confidence. Industrial visits, expert lectures, seminars on technical topics and group discussion are planned in a semester so that there will be increased participation of students in learning process.

### **Objectives:**

To develop the following skills:

#### Intellectual skills:

- 1) Analyze information from different sources.
- 2) Prepare reports.

### Motor skills:

- 1) Present given topic in a seminar.
- 2) Interact with peers to share thoughts.
- 3) Prepare a report on industrial visit, expert lecture.

### **Learning Structure:**

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

### INDUSTRIAL TRAINING (OPTIONAL)

### Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

#### **#\* Online Theory Examination**

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sh eet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment.
- 2. Know key issues about environment.
- 3. Understands the reasons for environment degradation.
- 4. Know aspects about improvement methods.
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation.

### **Learning Structure:**

# Theory:

| Topic and Contents                                                                                          | Hours | Marks |
|-------------------------------------------------------------------------------------------------------------|-------|-------|
| Topic 1: Nature of Environmental Studies                                                                    |       |       |
| Specific Objectives:                                                                                        |       |       |
| Define the terms related to Environmental Studies                                                           |       |       |
| State importance of awareness about environment in general public                                           | 01    | 04    |
| Contents:                                                                                                   | 01    | 04    |
| • Definition, Scope and Importance of the environmental studies                                             |       |       |
| Importance of the studies irrespective of course                                                            |       |       |
| Need for creating public awareness about environmental issues                                               |       |       |
| <b>Topic 2: Natural Resources and Associated Problems</b>                                                   |       |       |
| Specific Objectives:                                                                                        |       |       |
| Define natural resources and identify problems associated with                                              |       |       |
|                                                                                                             |       |       |
| Identify uses and their overexploitation Identify alternate recourses and their importance for environment. |       |       |
| Contents:                                                                                                   |       |       |
| 2.1 Renewable and Non renewable resources                                                                   |       |       |
| 2.1 Kenewable and Non Tenewable resources                                                                   |       |       |

#### Practical: Skills to be developed:

#### **Intellectual Skills**:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

### **Motor Skills:**

- 1. Presentation Skills
- 2. Use of multi media

### List of Projects:

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds

4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

#### **Rationale:**

Diploma technician often comes across various types of basic manufacturing processes. He / she is required to select, operate and control the appropriate processes for specific applications. He / she is also required to know about various cutting tools, latest improvements in manufacturing processes. This is a core technology subject. The diploma technician should know how the raw material gets processed through various processes and ultimately results into finished goods.

Hence it is essential that, he has understanding of basic manufacturing processes, machines, tools and equipments. With sound knowledge of this subject, the diploma technician will be able to handle and control practical situations more effectively and confidently.

#### **Objectives:**

The student will be able to:

- 1) Use the basic machine tools like lathe and drilling.
- 2) Produce and inspect the job as per specified dimensions.
- 3) Select the specific manufacturing processes for the desired output.
- 4) Adopt safety practices while working on various machines.
- 5) Explain the different types of plastic moulding processes.
- 6) Select the basic manufacturing process for different components to be machined.

### **Learning Structure:**

### Theory:

| 1:Forming Processes         Specific Objectives:         > To list basic manufacturing processes and write working principal of different manufacturing processes like Drop forging, Rolling and Extrusion         > To identify and select proper manufacturing process for a specific component         Content         1.1 Drop forging:       06 Marks         Upset forging press forging(die forging) open die & closed die forging |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# **Practical:**

Skills to be developed:

# Intellectual skills:

- 1) Identify basic manufacturing processes like forging, rolling and extrusion, for required component.
- 2) Specify need of pattern allowances.
- 3) Decide process parameters for different operations.
- 4) Decide tools required for a manufacturing process.
- 5) Identify a joining method for fabrication.

#### **Motor Skills:**

1) Operate lathe, drilling machine.

- 2) Set the tool and select the cutting parameters for machining operations.
- 3) Set the tools, job and decide cutting parameters.
- 4) Inspect various dimensions of jobs by using measuring instruments.
- 5) Make simple wooden / thermocole pattern.

## List of Practical:

- 1) One turning job on lathe containing the operations like plain turning, step turning, taper turning, grooving, knurling and chamfering.
- 2) One job using Spot welding machine. (Min. 4 spots on 0.5-1mm thick metal strip.)
- 3) One simple job on TIG / MIG welding setup or visit to TIG / MIG welding shop.
- 4) Moulding practice for any one pattern.
- 5) Industrial visit to observe plastic processing shop and report on the visit.
- 6) One composite job containing the operations like lathe with axial & across drilling (like Nut- Bolt assembly or any other equivalent job).
- 7) Demonstration of eccentric turning using four jaw chuck.

#### Notes:

- 1] The workshop instructors should prepare specimen job in each shop as demonstration practice before the student (as per the drawing given by subject teacher/ workshop superintendent).
- 2] Theory behind practical is to be covered by the concerned subject teacher/ workshop superintendent.
- 3] Workshop diary should be maintained by each student duly signed by respective shop instructors.
- 4] Assignments are to be assessed by the concerned subject teacher/ workshop superintendent.

# **Guidelines for conducting Practical Examination for MANUFACTURING PROCESSES**

- 1. The job drawing must be jointly decided by the External and Internal examiner prior to one day in advance from the commencement of practical examination. Every student should be supplied the copy of job drawing before examination.
- 2. Time for practical examination should be **THREE HOURS.**
- 3. Practical examination of the students shall consists of Turning job containing different operations like Facing, straight Turning, Taper turning, Chamfering, Knurling, Threading, Grooving. (Minimum 5 operations) Students will perform the job as per the drawing provided to them.
- 4. Raw material size Bar dia. 40 to 50 mm, length 80 to 100 mm.

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

This subject is introduced with intention to teach students of mechanical branch facts, concepts, principles and procedure of operating electrical machines, circuits and systems and their applications. This subject is most important in regards to selection of electrical drives for various applications and will provide sufficient knowledge about electrical machines, equipments used in industry/field. This subjects deals with measurements of electrical quantities to judge the performance of electrical machines

#### **General Objectives:**

Student will be able to:

- 1. Differentiate between a.c. and d.c. supply.
- 2. Identify different type's motors, transformers and drives.
- 3. Select suitable drive as per the requirements.
- 4. Understand various types of electric heating and welding operations in manufacturing processes.
- 5. Supervise routine maintenance of electrical machines and supply systems.
- 6. Use the tariff system.
- 7. Calculate energy requirements and cost of energy.

# **Learning Structure:**

| 7.2 Introduction to different accessories like MCB, ELCB, wires & cables. |      |    |     |  |
| 7.3 Fluorescent, CFL and LED lamps with their ratings and applications.   |      |    |     |  |
| 7.4 Concept of energy conservation and energy audit                       |      |    |     |  |
| 7.5 Necessity of earthing, type, safety tools, first aid.                 |      |    |     |  |
| 7.6 Types of tariff, pf improvement only methods.                         |      |    |     |  |
| 7.7 Fire extinguishing methods adopted in electrical engineering          |      |    |     |  |
| 7.8 Trouble shooting electrical installations and machines.               |      |    |     |  |
| Т                                                                         | otal | 48 | 100 |  |

## Skills to be developed for practical:

#### Intellectual skills

#### Student will be able to:

- 1. Identify and give specifications of electrical motors and transformers.
- 2. Interpret wiring diagrams for various applications.
- 3. Identify safety equipments required.
- 4. Decide the procedure for setting experiments.

# Motor skills:

#### Student will be able to:

- 1. Draw wiring diagram
- 2. Make wiring connections to connect electrical equipments and instruments.
- 3. Measure electrical power, earthing resistance and other electrical quantities.
- 4. Calibrate electrical instruments.
- 5. Use of safety devices while working.
- 6. Prepare energy consumption bill with present tariff structure.

# **List of Practical:**

- 1. Know your electrical laboratory.
- 2. Find the performance of R-L series circuit with single phase A.C. supply and determine the current, power and power factor.
- 3. Find the performance of R-C series circuit with single phase A.C. supply and determine the current, power and power factor.
- 4. Verify the relationship between line and phase values of voltages and currents in three phase balanced star and delta connected load.

- 5. Determine efficiency and single phase transformer at no load, half load and full load by conducting load test.
- 6. Determination of slip of three phase induction motor by use of tachometer at no load and full load.
- 7. Observe the change in direction of rotation of three phase induction motor by changing the phase sequence R-Y-B
- 8. Prepare switch board for two lamps, one fan, one fan regulator and one 5 ampere socket.
- 9. Connect single phase energy meter in simple lamp circuit for measurement of energy consumption for one hour.
- 10. Search fault in faulty machines or installation.
- 11. Demonstration of servo motor and stepper motor.

# [Note: Practicals 1 to 9 shall be performed by 2 students and practical 10 in a group of 4 students]

# Assignment:

- 1. **Industrial visit:** Visit to show various motors, electrical devices, accessories used in mechanical industrial applications like dairy, crushers, dall mill, oil mill or small scale unit. [The group size is as suggested by industry]
- 2. Detail study of electrical motors manufacture's catalogues to study mounting installation, frame work, coupling, rotor inertia etc. [To be performed individually]

# NOTE: All Practicals and assignment are compulsory and should be considered in assessment formats A1, A2 And So On.

| 04   |           | 02   | 03                 | 100 |    | 25# | 25@ | 150   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work. (SW)

#### **Rationale:**

Production Engineer is involved in manufacturing aspects of power producing and power absorbing devices. I.C. Engines are used on large scale in automobiles and power sector. Compressors find many applications due to automation. Use of refrigeration and air-conditioning systems is increasing in industrial and domestic fields. Knowledge of working of these devices can help him in improving the performance of these devices.

#### **Objectives:**

The Student will be able to:

- 1. Understand construction and working of Boilers and turbines.
- 2. Understand constructional features of air compressor.
- 3. Know the applications of refrigeration.
- 4. Classify air-conditioning systems

#### **Learning Structure:**

# **Theory Content:**

| Topic and Contents                                                                      | Hours | Marks |
|-----------------------------------------------------------------------------------------|-------|-------|
| 1. Sources of energy 10Marks                                                            |       |       |
| Specific objectives                                                                     |       |       |
| State the various types and sources of energy.                                          |       |       |
| Content:                                                                                |       |       |
| 1.1 Brief description of energy Sources.                                                |       |       |
| 1.2 Classification of energy sources                                                    |       |       |
| • Renewable-                                                                            | 08    | 10    |

| Total                                                                         | 64 | 100 |

## Practical:

Skills to be developed:

#### **Intellectual Skills:**

- 1. Plan for trial test.
- 2. Calculate derived parameters.

#### Motor Skills:

- 1. Operate I.C. Engines.
- 2. Observe and sketch boiler mountings and accessories.
- 3. Test reciprocating air compressor and take measurements.

#### List of Practical:

- 1. Trial on domestic solar water heater and calculate its efficiency.
- 2. Trace and draw the flue gas path and water steam circuit with the help of boiler model.
- 3. Trial on single/multi cylinder petrol or diesel engine with heat balance sheet.
- 4. Measurement of I.C. Engine pollutants with the help of Exhaust gas Analyzer.
- 5. Trial on single / two-stage Reciprocating compressor and determine volumetric, isothermal efficiency.
- 6. Trial on Refrigeration Test Rig for calculation of C.O.P, power required, refrigerating effect.
- 7. Identification of the components and trace the flow of refrigerant in domestic refrigerator/window air conditioner.

8. Visit to sugar factory/biogas plant/solar system/wind mills and draw the block diagram of plant layout and system.

|------|----------|------|--------------|-----|-----------|-----------|-----|-------|
| TH   | TU       | PR   | PAPER<br>HRS | TH  | PR        | OR        | TW  | TOTAL |
| 04   |          | 02   | 03           | 100 | 25#       |           | 25@ | 150   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Knowledge of fluid properties, fluid flow & fluid machinery is essential in all fields of engineering. Hydraulic machines have important role in water supply, irrigation, power generation and also in most of the engineering segments. This subject requires knowledge of basic engineering sciences, applied mechanics, mathematics etc. The fundamentals of this subject are essential for the subject "Industrial Fluid Power" in sixth semester.

General Objectives: The student will be able to

- 1) **Define** various properties of fluids
- 2) Measure pressure, velocity and flow rate using various instruments.
- 3) State continuity equation, Bernoulli's equation and its applications.
- 4) Estimate various losses in flow through pipes.
- 5) **Explain** concept of impact of jet on various types of vanes.
- 6) **Draw** the construction, working of hydraulic pumps and turbines.
- 7) Evaluate performance of turbines and pumps.

#### **Learning Structure:**

# Theory:

| Topics and Contents                                                                  | Hours | Marks |
|--------------------------------------------------------------------------------------|-------|-------|
| 1. Properties of fluid and Fluid Pressure                                            |       |       |
| Specific Objectives:                                                                 |       |       |
| Define fluid properties.                                                             |       |       |
| Differentiate between fluid pressure intensity and pressure head.                    |       |       |
| Solve numerical related to properties of fluid, fluid pressure and                   |       |       |
| manometers.                                                                          |       |       |
| Contents:                                                                            |       |       |
| 1.1 Properties of Fluid 06 Marks                                                     |       |       |
| Density, Specific gravity, Specific volume, Specific Weight, Dynamic                 |       |       |
| viscosity, Kinematic viscosity, Surface tension, Capillarity, Vapour                 | 12    | 20    |
| Pressure, Compressibility                                                            |       |       |
| 1.2: Fluid Pressure & Pressure Measurement 14 Marks                                  |       |       |
| • Fluid pressure, Pressure head, Pressure intensity                                  |       |       |
| • Conceptof absolute vacuum, gauge pressure, atmospheric pressure,                   |       |       |
| absolute pressure.                                                                   |       |       |
| • Simple and differential manometers, Bourden pressure gauge.                        |       |       |
| • Total pressure, center of pressure- regular surface forces on                      |       |       |
| immersed bodies in liquid in horizontal, vertical and inclined                       |       |       |
| position                                                                             |       |       |
| 2. Fluid Flow                                                                        |       |       |
| Specific Objectives:                                                                 |       |       |
| State Bernoulli's theorem and apply it to venturimeter, orifice and pitot            |       |       |
| tube.                                                                                |       |       |
| Contents:                                                                            |       |       |
| • Types of fluid flows-Laminar, turbulent, steady, unsteady, uniform,                |       |       |
| non uniform, rotational, irrotational.                                               | 10    |       |
| • Continuity equation. Bernoulli's theorem                                           | 10    | 14    |
| • Venturimeter – Construction, principle of working,                                 |       |       |
| coefficient of discharge, Derivation for discharge through                           |       |       |
| venturimeter.                                                                        |       |       |
| • Orifice meter – Construction, Principle of working, hydraulic                      |       |       |
| coefficients. Derivation for discharge through Orifice meter                         |       |       |
| • Pitot tube – Construction, Principle of Working                                    |       |       |
| 3. Flow Through Pipes                                                                |       |       |
| Specific Objectives:                                                                 |       |       |
| State laws of friction and list various losses in flow through pipes.                |       |       |
| Solve numerical on laws of friction and list various losses in flow through          |       |       |
| pipes.                                                                               |       |       |
| Contents:                                                                            | 10    | 14    |
| • Laws of fluid friction (Laminar and turbulent)                                     | 10    | 14    |
| • Darcy's equation and Chezy's equation for frictional losses                        |       |       |
| • Minor losses in fittings and valves                                                |       |       |
| • Hydraulic gradient line and total energy line                                      |       |       |
| Hydraulic power transmission through pipe                                            |       |       |
| Impact of lats                                                                       |       |       |
| Specific Objectives                                                                  | 06    | 10    |
| <ul> <li>Analyze explain the impact of jet on vanes in various conditions</li> </ul> |       | 10    |

| > Solve numerical on impact of jet on vanes in various conditions.                               |    |     |
|--------------------------------------------------------------------------------------------------|----|-----|
| Contents:                                                                                        |    |     |
| • Impact of jet on fixed vertical, moving vertical flat plates.                                  |    |     |
| • Impact of jet on curved vanes with special reference to turbines and                           |    |     |
| pumps                                                                                            |    |     |
| 5. Hydraulic Turbines                                                                            |    |     |
| Specific Objectives:                                                                             |    |     |
| Explain working principle of various hydraulic turbines.                                         |    |     |
| Calculate work done, power generated and various efficiencies of hydraulic                       |    |     |
| turbines.                                                                                        |    |     |
| Contents:                                                                                        |    |     |
| • Layout and features of hydroelectric power plant, surge tanks and its need.                    | 12 | 18  |
| • Classification of hydraulic turbines and their applications.                                   |    |     |
| • Construction and working principle of Pelton wheel, Francis and                                |    |     |
| Kaplan turbine.                                                                                  |    |     |
| <ul> <li>Draft tubes – types and construction, Concept of cavitation in turbines,</li> </ul>     |    |     |
| • Calculation of Work done, Power, efficiency of turbine                                         |    |     |
| 6. Pumps                                                                                         |    |     |
| Specific Objectives:                                                                             |    |     |
| Explain working of centrifugal, reciprocating and multistage pumps.                              |    |     |
| Explain the concept of cavitation in pumps.                                                      |    |     |
| Calculate manometric head, work done and various efficiencies related to                         |    |     |
| the pumps.                                                                                       |    |     |
| Select the pump for a given application.                                                         |    |     |
| 6.1 Centrifugal Pumps 14 Marks                                                                   |    |     |
| Contents:                                                                                        |    |     |
| • Construction, principle of working, priming methods and Cavitation                             |    |     |
| • Types of casings and impellers.                                                                |    |     |
| <ul> <li>Manometric head, Work done, Manometric efficiency, Overall efficiency, NPSH.</li> </ul> | 14 | 24  |
| • Performance Characteristics of Centrifugal pumps.                                              |    |     |
| • Trouble Shooting.                                                                              |    |     |
| <ul> <li>Construction, working and applications multistage pumps</li> </ul>                      |    |     |
| • Submersible pumps and jet pump                                                                 |    |     |
| 6.2 Reciprocating Pump 10 Marks                                                                  |    |     |
| • Construction, working principle and applications of single and                                 |    |     |
| double acting reciprocating pumps.                                                               |    |     |
| • Slip, Negative slip, Cavitation and separation.                                                |    |     |
| • Use of Air Vessels.                                                                            |    |     |
| • Indicator diagram with effect of acceleration head & frictional head.                          |    |     |
| (No numerical on reciprocating pumps)                                                            |    |     |
| Total                                                                                            | 64 | 100 |

#### Practical: Skills to be developed: Intellectual Skills:

1) Select appropriate flow and pressure measuring devices for a given situation.

2) Analyze the performance of pumps and turbines.

## Motor Skills:

- 1) Use flow and pressure measuring devices.
- 2) Operate pumps and turbines.

# List of Practicals:

- 1. Measure water pressure by using Bourdon's pressure gauge and U-tube Manometer. Also measure discharge of water by using measuring tank and stop watch.
- 2. Calibrate Bourdon's pressure gauge with the help of Dead weight pressure gauge.
- 3. Verify Bernoulli's theorem.
- 4. Determine Coefficient of Discharge of Venturimeter.
- 5. Determine coefficient of Discharge, Coefficient of Contraction and Coefficient of Velocity of Sharp edged circular orifice.
- 6. Determine Darcy's friction factor 'f' in pipes of three different diameters for four different discharges.
- 7. Determine minor frictional losses in pipe fittings.
- 8. Determine overall efficiency of Pelton wheel by using Pelton wheel test rig.
- 9. Determine overall efficiency of Centrifugal Pump & plot its operating characteristics by using Centrifugal pump test rig.
- 10. Determine overall efficiency of Reciprocating pump by using Reciprocating Pump test rig.

# Assignments

1. Information collection of Centrifugal, reciprocating, multistage pumps and submersible pumps from local market and from internet. Comparison of various models manufactured by different manufacturers. [The market survey is to be completed in a group of (max.) three to four students and the report of the same is to be included as part of term work.]

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

It is a core technology subject in Mechanical Engineering Discipline. Mechanical Engineers often come across various machines in practice. They should be able to identify and interpret various elements of machines in day to day life. In maintaining various machines, a diploma engineer should have sound knowledge of fundamentals of machine and mechanism. It will be helpful for them to understand the mechanisms from operational point of view in a better way. This subject imparts the kinematics involved in different machine elements and mechanisms like gear, cam-follower, follower, belt-pulley, flywheel, brake, dynamometer, clutch, etc.

Detailed knowledge of these aspects with deep insight into the practical applications develops a professional confidence in them to become successful Engineer.

This subject serves as a prerequisite for subjects like Machine Design to be learned in higher semester.

#### **Objectives:**

#### The student will be able to:

- 1. Understand different machine elements and mechanisms.
- 2. Understand Kinematics and Dynamics of different machines and mechanisms.
- 3. Draw cam profile suitable to various displacement diagram.
- 4. Select Suitable Drives and Mechanisms for a particular application
- 5. Understand the function, operation and application of flywheel and governor.
- 6. Understand the function, operation and application of brake, dynamometer, clutch and bearing

7. Find magnitude and plane of unbalanced forces.

# Theory:

| Topic and Content                                                                                                                     | Hours | Marks |
|---------------------------------------------------------------------------------------------------------------------------------------|-------|-------|
| 1. Fundamentals and type of Mechanisms                                                                                                |       |       |
| Specific objectives:                                                                                                                  |       |       |
| Define various terms related to mechanisms.                                                                                           |       |       |
| Explain construction and working of various mechanisms                                                                                |       |       |
| 1.1 Kinematics of Machines:- Definition of Kinematics, Dynamics, statics,                                                             |       |       |
| Kinetics, Kinematic link, Kinematic pair and its types, constrained motion                                                            |       |       |
| and its types, Kinematic chain and its types, Mechanism, inversion, machine                                                           |       |       |
| and structure 8 Marks                                                                                                                 | 07    | 10    |
| 1.2 Inversion of Kinematic Chain                                                                                                      | 07    | 16    |
| • Inversion of four bar chain, coupled wheels of Locomotive, Beam engine, Pantograph.                                                 |       |       |
| • Inversion of single slider Crank chain –Pendulum pump, Rotary I.C.                                                                  |       |       |
| Engine mechanism. Oscillating cylinder engine. Whitworth quick return                                                                 |       |       |
| mechanism. Quick return mechanism of shaper.                                                                                          |       |       |
| • Inversion of Double Slider Crank Chain- Scotch Yoke Mechanism.                                                                      |       |       |
| Elliptical trammel. Oldham's Coupling8 Marks                                                                                          |       |       |
| 2. Velocity and Acceleration in Mechanisms                                                                                            |       |       |
| Specific objectives                                                                                                                   |       |       |
| Draw velocity and acceleration diagram for given mechanism                                                                            |       |       |
| 2.1 Concept of relative velocity and relative acceleration of a point on a link,                                                      |       |       |
| angular acceleration, inter-relation between linear and angular velocity and                                                          |       |       |
| acceleration.                                                                                                                         |       |       |
| 2.2 Analytical method (No derivation) and Klein's construction to determine                                                           | 08    | 16    |
| velocity and acceleration of different links in single slider crank mechanism.<br>8 Marks                                             |       |       |
| 2.3 Drawing of velocity and acceleration diagram of a given configuration,                                                            |       |       |
| diagrams of simple Mechanism. Determination of velocity and acceleration                                                              |       |       |
| of point on link by relative velocity method(Excluding Coriollis component                                                            |       |       |
| of acceleration) 8 Mark                                                                                                               |       |       |
| 3. Cams and Followers                                                                                                                 |       |       |
| Specific objectives                                                                                                                   |       |       |
| Define the terms related to Cam                                                                                                       |       |       |
| Classify Cams and Followers                                                                                                           |       |       |
| Draw cam profile as per the given applications                                                                                        |       |       |
| 3.1 Concept, definition and applications of Cams and Followers. Cam                                                                   |       |       |
| terminology                                                                                                                           | 06    | 12    |
| 3.2 Classification of Cams and Followers.                                                                                             | 00    | 12    |
| 3.3 Different follower motions and their displacement diagrams - Uniform                                                              |       |       |
| velocity, Simple harmonic motion, uniform acceleration and Retardation.                                                               |       |       |
| 4 Marks                                                                                                                               |       |       |
| 3.4 Drawing of profile of radial cam with knife-edge and roller follower with and                                                     |       |       |
| without offset with reciprocating motion (graphical method)                                                                           |       |       |
| ð Marks                                                                                                                               |       |       |
| 4. Power Transmission                                                                                                                 |       |       |
| Specific objectives                                                                                                                   | 10    | 20    |
| <ul> <li>Give broad classification of Drives.</li> <li>Select Switchle Drives and Machanisms for a nerticular application.</li> </ul> |       |       |
| $\sim$ select suitable prives and viechamisms for a particular application                                                            |       |       |

| Calculate various quantities like velocity ratio, belt tensions, slip, angle of                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |            |    |

| 7.2 Bearings- i) Simple Pivot, ii) Collar Bearing iii) conical pivot. Torque and                                                       |    |     |
| power lost in friction. (Simple numericals)                                                                                            |    |     |
| 8. Balancing                                                                                                                           |    |     |
| Specific objectives                                                                                                                    |    |     |
| Explain the concept of balancing                                                                                                       | 02 | 06  |
| Find balancing mass and position of plane, analytically and graphically.                                                               | 02 | 00  |
| 8.1 Concept of balancing. Balancing of single rotating mass. Analytical/Graphical                                                      |    |     |
| methods for balancing of several masses revolving in same plane.                                                                       |    |     |
| Total                                                                                                                                  | 48 | 100 |

#### Practicals: Skills to be developed:

# **Intellectual Skills:**

- 1. Determine velocity and acceleration of links in a given mechanism.
- 2. Analyse balancing of rotating masses in a single plane.
- 3. Interpret interrelationship between components of various braking mechanisms.
- 4. Compare various power transmission devices.

## Motor Skills:

- 1. Drawing of velocity and acceleration diagrams.
- 2. Dismantle and assemble given brakes and clutches.
- 3. Draw cam profiles for a given application
- 4. Draw velocity and acceleration diagram of the given mechanisms
- 5. Draw force polygon for unbalanced masses revolving in same plane

Note - The Term work shall consist of Journal / lab manual and A-3 size sketch book.

#### List of Practical:

- 1. Sketch and describe working of quick return mechanism for a shaper. Find the ratio of time of cutting stroke to the return stroke to understand quick return motion in shaping operation.
- 2. Sketch and describe the working of the following mechanisms with its application,
  - a) Bicycle free wheel sprocket mechanism
  - b) Geneva mechanism
  - c) Ackerman's steering gear mechanism
  - d) Foot operated air pump mechanism
- 3. Determine velocity and acceleration of various links of the given two mechanism, by relative velocity method for analysis of motion of links.
- 4. Determine velocity and acceleration in an I. C. engine's slider crank mechanism by Kleins's construction.
- 5. Draw the profile of a radial cam for the given follower type to obtain the desired follower motion.
- 6. Determine slip, length of belt, angle of contact in an open belt drive to understand its performance.
- 7. Draw a schematic diagram of centrifugal governor and describe its working. Draw a graph between radius of rotation versus speed of governor to understand its function.

- 8. Dismantle and assemble mechanically operated braking mechanism of two wheelers.Sketch the two wheeler braking system and identify the functions of various components.
- 9. Dismantle and assemble multi-plate clutch of two wheeler. Draw neat sketch and state the functions of various components.
- 10. Determine graphically counterbalance mass and its direction for complete balancing of a system of several masses rotating in a single plane.

#### **Rational:**

The purpose of introducing Professional practices is to fulfill the need of students to stand in today's global market with knowledge and confidence. This can be achieved by arranging industrial visits, expert lectures attitude to present them-selves, get alternative solutions and validation of the selected alternatives, socially relevant activities, and modular courses. Professional Practices is helpful in broadening technology base of students beyond curriculum. Model making exercises allow students to think more creatively and innovatively and inculcating habit of working with their own hands. Modular courses are introduced with a view of learning and acquiring higher technology skills through industry experts and consultants from the respective fields.

#### **Objectives:**

The student will be able to:

- 1) Acquire information from different sources.
- 2) Prepare notes for given topics
- 3) Present seminar using power projection system.
- 4) Interact with peers to share thoughts.
- 5) Work in a team and develop team spirit.

#### **Intellectual Skill:**

Student will be able to-

- 1) Search information from various resources.
- 2) Prepare notes on selected topics.
- 3) Participate in group discussions.

#### **Motor Skills:**

- 1) Observe industrial practices during visits.
- 2) Prepare slides / charts for presentation in seminar.
- 3) Develop a model

# **Learning Structure:**

| Applications | Gaining confidence in report writing and presentations skills in identified<br>contents of curriculum, apply knowledge in model making. Developing self<br>learning habbit. |  |  |  |  |  |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|
|              |                                                                                                                                                                             |  |  |  |  |  |
| Procedures   | Writing skill, expert lectures, seminars, industrial visit, material conversion processes, brain storming technique.                                                        |  |  |  |  |  |
|              |                                                                                                                                                                             |  |  |  |  |  |
| Concepts     | Industry Institute Interaction, Team work, brain storming, information search.                                                                                              |  |  |  |  |  |
|              |                                                                                                                                                                             |  |  |  |  |  |
| Facts        | Contents of identified topics, Industrial experts, models, equipments, machinery, projection system, etc.                                                                   |  |  |  |  |  |

#### **Content:**

| Topic & Content                                                                               | Hours |
|-----------------------------------------------------------------------------------------------|-------|
| 1. Information Search:                                                                        |       |
| Information search be made through manufacturers catalogue, Hand books, magazines             |       |
| journal and websites, and submit a report on any Two Topics in a group of 3 to 4              |       |
| students, report size shall not be more than 10 pages.                                        |       |
| Following topics are suggested, any other equivalent topics may be selected.                  |       |
| i) Present scenario of electric power generation in Maharashtra state /India.                 |       |
| ii) Composite materials – Types, properties & application                                     |       |
| iii) Material handling equipments commonly used in industries.                                |       |
| iv) Advances in Automobile engines.                                                           |       |
| v) Hydraulic steering systems of Automobile.                                                  |       |
| vi) Mechanisms used to produce straight-line motion.                                          |       |
| vii) Mechanisms used for generating intermittent motion.                                      |       |
| viii) Advanced surface coating techniques like chemical vapor deposition, ion                 | 06    |
| implantation, physical vapor deposition.                                                      |       |
| ix) Types of cutting tools- specification, materials and applications.                        |       |
| x) Booking of E-Tickets for Railways/Buses/Air travel.                                        |       |
| xi) Profiles of 2 multinational companies.                                                    |       |
| xii) Engine lubricants, coolants and additives                                                |       |
| xiii) Power steering, power windows                                                           |       |
| xiv) ABS(anti lock braking systems)                                                           |       |
| xv) MPFI(multi point fuel injection) system                                                   |       |
| xvi) Role of MIDC, MSSIDC, DIC, Financial institutions in development of                      |       |
| industrial sector.                                                                            |       |
| xvii) Solar energy systems - Components and their functions, applications                     |       |
| xviii) Design data book - Study and use of types of data.                                     |       |
| 2. Lectures by professionals/Industry Experts:                                                |       |
| Two lectures of two hour duration be arranged on any two topics suggested below or any        |       |
| other suitable topics to acquire practical information beyond scope of curriculum.            |       |
| Students shall prepare a brief report of each lecture as a part of their term work.           |       |
| i) Components of project Report.                                                              |       |
| ii) Various loan schemes of banks, LIC and other agencies for education and                   |       |
| other purposes.                                                                               |       |
| iii) Use of plastics & rubbers in Automobiles industries.                                     |       |
| iv) Type of processes used to protect material surfaces from environmental effect.            |       |
| v) Product life cycle.                                                                        | 04    |
| vi) Industrial application of mechatronics.                                                   | 04    |
| vii) Special features of CNC machines                                                         |       |
| viii) Gear manufacturing & gear teeth finishing processes.                                    |       |
| ix) Gear boxes-industrial & Automobile applications.                                          |       |
| x) Super-finishing operation & their industrial applications.                                 |       |
| xi) Processing methods for plastic components.                                                |       |
| xii) Features of modern boilers                                                               |       |
| xiii) Strainers and filters –Types, functions and applications                                |       |
| xiv) Industrial drives-Types, components, comparison and applications.                        |       |
| xv) Introduction to Apprenticeship Training Scheme                                            |       |
| 3. Seminars:                                                                                  |       |
| One seminar be arranged on the subjects related to 4 <sup>th</sup> semester. Or topics beyond |       |
| curriculum.                                                                                   | 04    |
| Each student shall submit a report up to 10 pages and deliver the seminar.                    |       |
| batch size – 2-3 students.                                                                    |       |

| Source of information – books, magazine, Journals, Website, surveys,                        |  |  |  |  |  |  |
|---------------------------------------------------------------------------------------------|--|--|--|--|--|--|
| Topics suggested for guidance-                                                              |  |  |  |  |  |  |
|                                                                                             |  |  |  |  |  |  |
| i) Clutches- Types, Principles, working, & applications.                                    |  |  |  |  |  |  |
| ii) High pressure boilers.                                                                  |  |  |  |  |  |  |
| iii) Heat exchangers-Types, working, applications.                                          |  |  |  |  |  |  |
| iv) Hydraulic turbines-Types, working & applications.                                       |  |  |  |  |  |  |
| v) Hydraulic pumps -Types, working & applications.                                          |  |  |  |  |  |  |
| vi) Sensors - Types, principle, & applications.                                             |  |  |  |  |  |  |
| vii) Super conductor technology - Types, principle, & applications.                         |  |  |  |  |  |  |
| viii) Semi conductors- Types, materials, & applications.                                    |  |  |  |  |  |  |
| ix) Industrial breaks- Types, construction, working, & applications.                        |  |  |  |  |  |  |
| 4. Industrial Visits                                                                        |  |  |  |  |  |  |
| Structured industrial visits be arranged and report of the same shall be submitted by each  |  |  |  |  |  |  |
| student to form a part of the term work.                                                    |  |  |  |  |  |  |
| No of visits- At least one                                                                  |  |  |  |  |  |  |
| Scale of industry- medium scale unit, large scale unit.                                     |  |  |  |  |  |  |
| Group size- practical batch                                                                 |  |  |  |  |  |  |
| Report-not exceeding 7 to 10 pages.                                                         |  |  |  |  |  |  |

| To observe Tool room, standards room etc.                                                   |  |  |  |  |  |  |
| roomed.                                                                                     |  |  |  |  |  |  |
| Following types of industries may be visited in & around the institute                      |  |  |  |  |  |  |
| i) Foundry                                                                                  |  |  |  |  |  |  |
| i) Forging units                                                                            |  |  |  |  |  |  |
| iii) Sheet metal processing unit                                                            |  |  |  |  |  |  |
| iv) Machine/ Automobile component manufacturing unit                                        |  |  |  |  |  |  |
| y) Eabrication unit/ powder metallurgy component manufacturing unit                         |  |  |  |  |  |  |
| v) Machine tool manufacturing unit                                                          |  |  |  |  |  |  |
| vii) Any processing industry like chemical textile sugar agriculture fertilizer             |  |  |  |  |  |  |
| industrias                                                                                  |  |  |  |  |  |  |
| viji) Auto workshop / four wheeler garage                                                   |  |  |  |  |  |  |
| iv) City water supply pumping station                                                       |  |  |  |  |  |  |
| x) Hydro electric power plant                                                               |  |  |  |  |  |  |
| vi) Wind mills Solar Park                                                                   |  |  |  |  |  |  |
| xi) wind mins, Solar Park                                                                   |  |  |  |  |  |  |

| 5. Socially Relevant Activities                                                               |    |  |  |  |  |
|-----------------------------------------------------------------------------------------------|----|--|--|--|--|
| Conduct any one activity through active participation of students and write the report.       |    |  |  |  |  |
| Group of students- maximum 4                                                                  |    |  |  |  |  |
| Report- Not more than 6 pages                                                                 |    |  |  |  |  |
| List of suggested activities- ( activities may be thought in terms of campus improvement)     |    |  |  |  |  |
| i) Awareness about carbon credit                                                              |    |  |  |  |  |
| ii) Anticorruption movement                                                                   | 04 |  |  |  |  |
| iii) Awareness about cyber crimes.                                                            |    |  |  |  |  |
| iv) Developing good citizens.                                                                 |    |  |  |  |  |
| v) Management of E- WASTE                                                                     |    |  |  |  |  |
| vi) Recycling of waste materials.                                                             |    |  |  |  |  |
| vii) Accident prevention & enforcement of safely rules.                                       |    |  |  |  |  |
| viii) Awareness about pollution and pollution control.                                        |    |  |  |  |  |
| ix) Any other relevant activity may be performed)                                             |    |  |  |  |  |
| 6. Mini Projects                                                                              |    |  |  |  |  |
| Students, in a group of 4, shall perform any one activity listed below.                       |    |  |  |  |  |
| i) Model making out of card board paper, wood, thermocol, plastics, metal, clay etc           |    |  |  |  |  |
| a) Any new idea/principle converted into model                                                |    |  |  |  |  |
| b) Mechanisms                                                                                 |    |  |  |  |  |
| c) Jigs/fixtures                                                                              |    |  |  |  |  |
| d) Material handling device etc                                                               |    |  |  |  |  |
| ii) Toy making with simple operating mechanisms                                               |    |  |  |  |  |
| iii Layout of workshop/department/college                                                     |    |  |  |  |  |
| iv) Experimental set $up/testing of a parameter$                                              |    |  |  |  |  |
| y) Display board indicating different type of machine components like bearing                 |    |  |  |  |  |
| fasteners couplings pipe fitting valves cams & followers exploded views of                    |    |  |  |  |  |
| assemblies type of welding equipment welding rods (drawings photo graphs)                     |    |  |  |  |  |
| vi) Any relevant project which will make students to collect information & work with          |    |  |  |  |  |
| their own hands                                                                               |    |  |  |  |  |
| Students shall arrange exhibition of all mini projects in the class/hall and present the task |    |  |  |  |  |
| to the audience/ exports/examiners. The student shell submit a brief report (May 5 pages)     |    |  |  |  |  |
| of the mini project                                                                           | 10 |  |  |  |  |
| OR                                                                                            |    |  |  |  |  |
| Modular course:                                                                               |    |  |  |  |  |
| Modular courses on any one of the suggested or equivalent tonic be undertaken by a            |    |  |  |  |  |
| group of 15 to 20 students                                                                    |    |  |  |  |  |
| i) Advance features in CAD                                                                    |    |  |  |  |  |
| i) Meshing of solid model using any suitable software                                         |    |  |  |  |  |
| iii) Developing Unfold Sheet or Hyperblank by using Blanking Software                         |    |  |  |  |  |
| iv) CAM Software                                                                              |    |  |  |  |  |
| v) Basics of DLC programming                                                                  |    |  |  |  |  |
| v) Applications of machatronics                                                               |    |  |  |  |  |
| vi) Applications of mechanomics                                                               |    |  |  |  |  |
| vii) Modern peckaging technology                                                              |    |  |  |  |  |
| viii) Ivioueni packaging technology                                                           |    |  |  |  |  |
| x) Dio proventia Dobota                                                                       |    |  |  |  |  |
| x) Dio-pheumanc Kobols                                                                        |    |  |  |  |  |
|                                                                                               | 22 |  |  |  |  |
| Total                                                                                         | 32 |  |  |  |  |

#### Note:-

The students who wish to undergo in plant training shall go through details regarding it in the syllabus of Professional Practices – III for fifth semester and complete the training in summer vacation at the end of fourth semester examination.

All such students will be assessed out of ten marks as per guidelines mentioned in the curriculum of professional practice III in the fifth semester

#### 2. Web sites

www.engineeringforchange.org www.wikipedia.com www.slideshare.com www.teachertube.com Course Name : All Branches of Diploma in Engineering & Technology

# Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG

Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

## INDUSTRIAL TRAINING (OPTIONAL)

#### Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

Student Contact Hours Per Week: 32 Hrs.

# THEORY AND PRACTICAL PERIODS OF 60 MINUTES EACH.

Total Marks: 800

@ - Internal Assessment, # - External Assessment, No Theory Examination, \$ - Common to all branches, #\* - Online Examination,

\* - Practicals of Electrical & Electronics at alternate week.

Abbreviations: TH-Theory, TU- Tutorial, PR-Practical, OR-Oral, TW- Term Work, SW- Sessional Work.

\*\* Industrial Training (Optional) - Student can undergo Industrial Training of four weeks after fourth semester examination during summer vacation.

Assessment will be done in Fifth semester under Professional Practices-III. They will be exempted from activities of Professional Practices-III of 5<sup>th</sup> Semester.

Conduct two class tests each of 25 marks for each theory subject. Sum of the total test marks of all subjects is to be converted out of 50 marks as sessional work (SW).

> Progressive evaluation is to be done by subject teacher as per the prevailing curriculum implementation and assessment norms.

Code number for TH, PR, OR, TW are to be given as suffix 1, 4, 8, 9 respectively to the subject code.

**Course Name : All Branches of Diploma in Engineering & Technology** 

# Course Code : AE/CE/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG/AU

Semester : Fourth

Subject Title : Environmental Studies

Subject Code : 17401

#### **#\* Online Theory Examination**

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

2

# **Learning Structure:**

# Theory:

#### Practical: Skills to be developed:

# Intellectual Skills:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

#### **Motor Skills:**

- 1. Presentation Skills
- 2. Use of multi media

# **List of Projects:**

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain.
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural.
- 3. Study of common plants, insects, birds
- 4. Study of simple ecosystems of ponds, river, hill slopes etc.
Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

#### \* - Practicals of Electrical & Electronics at alternate week.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Most of the equipments used in chemical industry are electrically powered. A minor electrical faults can be attended by a shop floor chemical engineer. This subject of electrical engg. addresses the fundamental concepts and operating principles of electrical appliances. It will enable the students in better handling and commissioning of the equipments.

The second section of the subject deals with the basic of semiconductor devices and their circuits necessary for the electronic control gadgets. It provides the information about logic gates, digital displays, small signal amplifiers and power supplies. This will help the students in building skills of effective handling of electronic control equipments.

#### General Objectives: Student will be able to develop:

- Awareness of Electrical Safety.
- Recognize Electrical fault in Chemical Plant.
- Recognize fault in power supply, display & control panel.
- Understand working of basic semiconductor devices.

#### **Learning Structure:**

## Theory: :

Section- I Electrical Engineering

#### **Practical:** Skills to be develor

Skills to be developed:

### Intellectual Skills:

- Correlate speed of the motor with its other parameters.
- Identify the simple faults in electrical and electronics systems.

#### **Motor Skills:**

- Use various tools and components for different electrical applications.
- Handle various electronic test and measuring equipments.

#### List of Practicals: Section-I

- 1) To verify ohm's law.
- 2) To measure electrical Power in Single phase AC circuit.
- 3) To plot the Speed & Armature voltage characteristics of DC shunt motor.
- 4) To plot the Speed & field current characteristics of DC shunt motor.
- 5) To determine transformation ratio of single phase transformer.
- 6) To prepare wiring for one lamp controlled by Single way switch.

### Section-II

- 1) To operate the various laboratory equipments & measuring instruments like power Supply, CRO, DMM.
- 2) To plot forward & reverse characteristics of Silicon Diode.
- 3) To measure percentage line regulation of Shunt Zener regulator.
- 4) To measure voltage gain of single stage common Emitter amplifier at 1 khz.
- 5) To verify the truth tables of various logic gates.
- 6) To verify De Morgan's First theorem.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

As per the present requirement new polymer materials are being invented and some are modified. The properties of these materials depend on the structure of polymer molucules. This subject provides information about monomers and organic chemical compounds. The basic understanding of polymerization reaction, its mechanism will help students to understand classification of polymers.

It is a Prerequisite to understand the properties of polymer materials and their applications.

### **Objectives:**

Students should be able to:

- 1. Classify various organic compounds used for polymer preparation.
- 2. Differentiate between types of polymers and their applications.
- 3. Describe various polymerization reactions.
- 4. Select appropriate polymer on the basis of molecular weight and properties.
- 5. State the effect of structure on the properties of polymer.

### **Learning Structure:**

### Theory

| Chapter | Name of Topics                                                      | Hours | Marks |
|---------|---------------------------------------------------------------------|-------|-------|
|         | Introduction to Polymers:                                           |       |       |
|         | Specific Objectives: - Students should be able to                   |       |       |
|         | Define the polymer, monomer and polymerization.                     |       |       |
|         | Classify the polymers.                                              |       |       |
| 1       | Differentiate between Thermoplastic & Thermosetting                 |       |       |
|         | plastic.                                                            |       |       |
|         | Content:                                                            | 06    | 16    |
|         | Classification of polymers natural, synthetic, organic, inorganic   |       |       |
|         | polymers, Plastics, elastomers, fibers & resins. Thermoplastic and  |       |       |
|         | Thermosetting plastics, commodity and Engineering plastics,         |       |       |
|         | homopolymer, copolymers-alternate, block, random & graft            |       |       |
|         | copolymers.                                                         |       |       |
|         | Polymerization Reactions :                                          |       |       |
|         | <b>Specific Objectives:</b> - Students should be able to            |       |       |
|         | Describe various polymerization reactions.                          |       |       |

### **PRACTICALS:**

Skills to be developed:

#### **Intellectual Skills:**

- 1. To prepare the various polymers.
- 2. To analyze the structure of polymer.
- 3. To calculate the density of polymer.
- 4. To distinguish the various polymer.
- 5. To classify the polymer according to their sources.
- 6. To analyze the properties of polymer.
- 7. To compare the various chemicals.

#### **Motor Skills:**

- 1. To handle the instruments properly.
- 2. To handle the chemicals carefully.
- 3. To identify the different solvents for different polymers.
- 4. To find out the different solvents for different polymers.
- 5. To identify the chemicals.
- 6. To classify the monomers.

#### **List of Practicals:**

1. To prepare Phenol Formaldehyde resin.

#### MSBTE - Final Copy Dt. 30/08/2013

- 2. To prepare Urea Formaldehyde resin.
- 3. To prepare polystyrene by bulk polymerization technique.
- 4. To determine Hydroxyl value of given polymer.
- 5. To determine the viscosity of polymer solution by Ostwald viscometer.
- 6. To determine the melting point of given polymer.
- 7. To prepare the Polystyrene by Bulk Polymerization.
- 8. To compare properties of emulsion & suspension polymer (PVC) from industrial data. (Case Study)
- 9. To demonstrate manufacturing process of unsaturated polyesters.
- 10. To demonstrate manufacturing process of epoxies.
- 11. To demonstrate manufacturing process of alkyds.
- 12. To demonstrate manufacturing process of PMMA by solution polymerization.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

This is an important subject for Plastic engineering. The course gives clear picture of types of Polymer Materials, their Grade and their end applications. The course summarize the Thermoplastic and Thermosetting materials, imparts knowledge about the preparation of Polymer material, which are used in plastic processing industries.

### **Objectives:**

- 1. To classify the plastics materials used in plastic industries.
- 2. To elaborate the features of preparation of plastic materials.
- 3. To interpret the property & application relationship
- 4. To select suitable plastics material depending on the end application.
- 5. To compare the different plastic materials according to their properties and structure.
- 6. To identify the given unknown plastics material.

#### **Learning Structure:**

### Theory:

| Chapter | Name of Topics                                                                                                                              | Hours | Marks |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------|-------|-------|

### **Practical:**

Skills to be developed:

### **Intellectual Skill**

- 1. To prepare the plastics materials by laboratory methods
- 2. To select additives for compounding of plastics materials.
- 3. To compare the plastics materials according to their properties
- 4. To select the suitable compounding equipment.

### **Motor Skills**

- 1. To follow standard procedure of polymer preparation.
- 2. To run machine successfully.
- 3. To understand the operation of machine.
- 4. To identify plastics by flame test.

### **List of Practicals:**

MSBTE - Final Copy Dt. 30/08/2013

| Sr.<br>No. | List of Experiments                                               |  |  |  |  |  |
|------------|-------------------------------------------------------------------|--|--|--|--|--|
|            | Identification of commodity plastics by flame and solvent test    |  |  |  |  |  |
| 1          | To identify the given polymer : Polystyrene (PS)                  |  |  |  |  |  |
| 2          | To identify the given polymer : Poly Vinyl Chloride (PVC)         |  |  |  |  |  |
| 3          | To identify the given polymer : Low Density Polyethylene (LDPE)   |  |  |  |  |  |
| 4          | To identify the given polymer : High Density Polyethylene (HDPE)  |  |  |  |  |  |
| 5          | To identify the given polymer : Polypropylene (PP)                |  |  |  |  |  |
| 6          | To prepare compound of Poly (vinyl chloride) by high speed mixer. |  |  |  |  |  |
| 7          | To Mix the additives with plastics by tumbler mixer.              |  |  |  |  |  |
| 8          | To determine the Bulk factor of Plastic Materials.                |  |  |  |  |  |
| 9          | To determine density of plastic material.                         |  |  |  |  |  |
| 10         | To determine acid value of given plastic material.                |  |  |  |  |  |
| 11         | To determine iodine value of given plastic material.              |  |  |  |  |  |
| 12         | Determination of moisture content of plastics materials.          |  |  |  |  |  |
| 13         | Determination of softening range of polymers.                     |  |  |  |  |  |
| 14         | Simple test for cure of plastic articles and laminates.           |  |  |  |  |  |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Plastic engineers are supposed to with various plastic processing machines .This course is introduce to induce abilities among the technician by providing the knowledge work of principle construction working and setting parameters of various machinery used for the plastic processing. This course also gives knowledge of process optimization.

### **Objectives:**

- 1. To select suitable processing technique.
- 2. To optimize the process.
- 3. To understand the principle and operation of processing technique.
- 4. To analyze and overcome the faults arising during processing.

#### **Learning Structure:**

## **Contents: Theory**

| Chapter | Name of the Topic                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Hours | Marks |

### Practicals: Intellectual Skills:

- 1. Select the process
- 2. Set process parameters for accurate molding
- 3. Find out faults of machine ,product during processing & set remedies accordingly
- 4. Optimization of process

### Motor Skills:

- 1. Start & stop the machine.
- 2. Select the proper machine for particular job work.
- 3. Loading & unloading the molds.
- 4. Run the process successfully without hazards.
- 5. Take safety precaution during processing.

## List of Praticals:

- 1. Trial on hand injection moulding machine
- 2. Demonstrate Compression molding process
- 3. To measure technical specification of single screw extruder
- 4. To study effect of process parameter on quality of injection molding product.

27

- 5. Trial on blow molding machine
- 6. To study effect of process parameter on quality of blow molding product
- 7. To demonstrate loading and unloading of injection mould on machine.
- 8. Trouble shooting in injection moulding.
- 9. Trial on extrusion blow moulding machine
- 10. Trouble shooting in blow moulding

11. To demonstrate thermoforming process.

|-----------------|----|----|--------------|----|-----------|-----------|----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH | PR        | OR        | TW | TOTAL |
| 01              |    | 02 |              |    | 50@       |           |    | 50    |

### **Rationale:**

In advanced age of computer, it becomes essential to understand how to give instructions to computers. This course intends to expose a student to the basic principles of programming through a structured programming language like 'C'. Study of this course would enable the students to learn any advanced Object Oriented Language.

### **Objectives:**

Students should be able to:

- 1. Break a given task into subtasks.
- 2. Enhance logical thinking.
- 3. Develop 'C' programs for simple applications.

#### **Learning Structure:**

#### **Contents: Theory**

| Chapter | Name of the Topic                                                                                                                                                                                                              | Hours |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| 1       | <b>Introduction:</b><br>Problem, definition and analysis, algorithm, flow charts, tracing and dry running of algorithms. Introduction to 'C' programming, simple program using Turbo 'C' compiler and execution of 'C' program | 02    |
| 2       | C Fundamentals: Character set, constants, data types, identifiers, key words, variable declarations<br>Types of Operators - unary, binary, arithmetic, relational, logical, assignment.                                        | 03    |
|         | Hierarchy of operators, expressions, library functions, Use of input/ output functions viz. Printf(), Scanf(), getch(), putch()                                                                                                |       |

### Practical: Skills to be developed:

#### **Intellectual Skills:**

- 1. Prepare and interpret flow chart of a given problem.
- 2. Represent data in various forms.
- 3. Use various control statements and functions

### **Motor Skills:**

- 1. Write program in 'C' language.
- 2. Run and debug 'C' program successfully.

#### **List of Practical:**

To write simple programme having engineering application involving following statements

- 1. Use of Sequential structure.
- 2. Use of if-else statements.
- 3. Use of for statement.
- 4. Use of Do-While Statement.

- 5. Use of While statement.
- 6. Use of brake and Continue statement.
- 7. Use of multiple branching Switch statement.
- 8. Use of different format specifies using Scanf() and Printf()
- 9. Use of one dimensional array e.g. String, finding standard deviation of a group data.
- 10. Use of two dimensional arrays of integers/ reals.
- 11. Defining a function and calling it in the main.

### **Rationale:**

The purpose of introducing Professional practices is to fulfill the need of students to stand in today's global market with knowledge and confidence. This can be achieved by arranging industrial visits, expert lectures attitude to present them-selves, get alternative solutions and validation of the selected alternatives, socially relevant activities, and modular courses. Professional practices is helpful in broadening technology base of students beyond curriculum. Model making exercises allow students to think more creatively and innovatively and inculcating habit of working with their own hands. Modular courses are introduced with a view of learning and acquiring higher technology skills through industry experts and consultants from the respective fields.

### **Objectives:**

The student will be able to:

- 1) Acquire information from different sources.
- 2) Prepare notes for given topics.
- 3) Present seminar using power projection system.
- 4) Interact with peers to share thoughts.
- 5) Work in a team and develop team spirit.

### Intellectual Skill:

Student will be able to:

- 1) Search information from various resources.
- 2) Prepare notes on selected topics.
- 3) Participate in group discussions.

#### **Motor Skills:**

1) Observe industrial practices during visits.

MSBTE - Final Copy Dt. 30/08/2013

- 2) Prepare slides / charts for presentation in seminar.
- 3) Develop a model

## **Learning Structure:**

| Applications | Gaining confidence in report writing and presentations skills in identified<br>contents of curriculum, apply knowledge in model making. Developing self<br>learning habbit. |  |  |  |

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

## INDUSTRIAL TRAINING (OPTIONAL)

### Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.
