Student Contact Hours Per Week: 34 Hrs.

# THEORY AND PRACTICAL PERIODS OF 60 MINUTES EACH.

#### Total Marks : 900

@ - Internal Assessment, # - External Assessment, No Theory Examination, \$ - Common to all branches, #\* - Online Theory Examination. Note: In plant training of 04 weeks after IV<sup>th</sup> semester & before V<sup>th</sup> semester. Optional for the students & to be assesses in the V<sup>th</sup> semester in PPT. Abbreviations: TH-Theory, TU- Tutorial, PR-Practical, OR-Oral, TW- Term Work, SW- Sessional Work.

\*\* Industrial Training (Optional) - Student can undergo Industrial Training of four weeks after fourth semester examination during summer vacation.

Assessment will be done in Fifth semester under Professional Practices-III. They will be exempted from activities of Professional Practices-III of 5<sup>th</sup> Semester.

- Conduct two class tests each of 25 marks for each theory subject. Sum of the total test marks of all subjects is to be converted out of 50 marks as sessional work (SW).
- > Progressive evaluation is to be done by subject teacher as per the prevailing curriculum implementation and assessment norms.
- > Code number for TH, PR, OR and TW are to be given as suffix 1, 4, 8, 9 respectively to the subject code.

MSBTE - Final Copy Dt. 30/08/2013

**Course Name : All Branches of Diploma in Engineering & Technology** 

# Course Code : AE/CE/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG/AU

Semester : Fourth

Subject Title : Environmental Studies

Subject Code : 17401

**Teaching and Examination Scheme:** 

| Teaching Scheme |    |    | Examination Scheme |      |    |    |     |       |  |
|-----------------|----|----|--------------------|------|----|----|-----|-------|--|
| TH              | TU | PR | PAPER<br>HRS       | TH   | PR | OR | TW  | TOTAL |  |
| 01              |    | 02 | 01                 | 50#* |    |    | 25@ | 75    |  |

#### **#\* Online Theory Examination**

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

# Theory:

| Topic and Contents                                                     | Hours | Marks    |
|------------------------------------------------------------------------|-------|----------|
| Topic 1: Nature of Environmental Studies                               |       |          |
| Specific Objectives:                                                   |       |          |
| Define the terms related to Environmental Studies                      |       |          |
| State importance of awareness about environment in general public      | 01    | 04       |
| Contents:                                                              | 01    | 04       |
| • Definition, Scope and Importance of the environmental studies        |       |          |
| Importance of the studies irrespective of course                       |       |          |
| Need for creating public awareness about environmental issues          |       |          |
| Topic 2: Natural Resources and Associated Problems                     |       |          |
| Specific Objectives:                                                   |       |          |
| Define natural resources and identify problems associated with<br>them |       |          |
| Identify uses and their overexploitation                               |       |          |
| Identify alternate resources and their importance for environment      |       |          |
| Contents:                                                              |       |          |
| 2.1 Renewable and Non renewable resources                              |       |          |
| • Definition                                                           |       |          |
| Associated problems                                                    |       |          |
| 2.2 Forest Resources                                                   |       |          |
| General description of forest resources                                |       |          |
| Functions and benefits of forest resources                             |       |          |
| • Effects on environment due to deforestation, Timber                  |       |          |
| extraction, Building of dams, waterways etc.                           | 04    | 10       |
| 2.3 Water Resources                                                    | 04    | 10       |

#### Practical: Skills to be developed:

#### **Intellectual Skills**:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

# **Motor Skills:**

- 1. Presentation Skills
- 2. Use of multi media

# List of Projects:

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds

4. Study of simple ecosystems of ponds, river, hill slopes etc

# Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

This subject caters to the need of technician engaged in the investigation, planning, construction and maintenance of railway, bridges, tunnels, airways and waterways. In Practical field, each component of transportation is a specialized branch of engineering.

This subject aims at basic knowledge about railway, bridges, tunnels, airport engineering and docks and harbour engineering in respect of their various types, materials used, functions of component parts, methods of construction, planning principles, aspects of supervision and maintenance.

Topic of railway engineering will be useful to understand the components of permanent way with their function, different types of rails and rail gauges. The topic of track geometry and yards will be useful to plan for station and yard layout. The topic on maintenance will be useful in the supervision of railway track.

Content on bridge engineering will be useful to understand different types and components of bridges with their functions. The content in topic site investigation will be useful while taking decision about site selection for a bridge.

Topic on tunnel engineering will be useful to understand different cross-sections of tunnel and methods of tunnellining. Contents on investigation will be useful for transferring the centre line of tunnel during construction.

Topic on Airport engineering and Docks and harbour engineering will be useful to understand different terms and used in these fields.

Thus all modes of transportation are useful in the development of a nation and improving over all standards in Agricultural, medical, industrial, educational and social fields.

#### **General Objectives:**

Student will be able to-

- 1. Know component parts of railway, bridges, tunnels, airport and dock and harbour engineering
- 2. Understand methods of survey and investigation of alignment of railway, bridges and tunnels.

3. Organize, supervise and coordinate the construction activities related to railway, bridges and tunnels

# Theory:

| Topic and Contents                                                        | Hours | Marks |
|---------------------------------------------------------------------------|-------|-------|
| Topic 1. Overview of Transportation Engineering                           |       |       |
| Specific objectives:                                                      |       |       |
| $\succ$ List various modes of transportation system with their merits and |       |       |
| demerits                                                                  |       |       |
| State importance of cross drainage works                                  |       |       |
|                                                                           | 02    | 04    |
| Contents:                                                                 | 02    | 04    |
| Role of transportation in the development of nation                       |       |       |
| • Modes of transportation system - roads, railway, airways,               |       |       |
| waterways, Importance of each mode, comparison and their relative         |       |       |
| merits and demerits.                                                      |       |       |
| • Necessity of Cross drainage works for railways.                         |       |       |
| Topic 2. Railway Engineering                                              |       |       |
|                                                                           |       |       |
| Specific objectives:                                                      |       |       |
| List zones of Indian Railway and rail gauges.                             |       |       |
| > State component parts of permanent way with their functions types,      |       |       |
| merits and demerits.                                                      |       |       |
| Calculate the superelevation and cant deficiency.                         |       |       |
| > Draw different track junctions and station yards                        |       |       |
| Contents:                                                                 |       |       |
| 2.1 Alignment and Gauges and Permanent ways                               |       |       |
| Classification of Indian Railways, zones of Indian Railway.               |       |       |
| Alignment- Factors governing rail alignment.                              |       |       |
| Rail Gauges – types, factors affecting selection of gauge. Rail track     |       |       |
| cross sections – standard cross section of BG and M.G Single and          |       |       |
| double line in cutting and embankment.                                    |       |       |
|                                                                           |       |       |
| Permanent ways                                                            |       |       |
| Ideal requirement, component parts.                                       |       |       |
| Rails - function and its types. Rail Joints - requirements, types, Creep  | 18    | 32    |
| of rail, causes and prevention of creep. Sleepers - functions and         |       |       |
| Requirement, types - wooden, metal, concrete sleepers and their           |       |       |
| suitability, sleeper density Ballast - function and different types with  |       |       |
| their properties, relative merits and demerits. Rail fixtures and         |       |       |
| fastenings – fish plate, bearing plates, spikes, bolts, keys, anchors and |       |       |
| anti creepers.                                                            |       |       |
|                                                                           |       |       |
| 2.2 Railway Track Geometrics and Branching of Tracks14                    |       |       |
| • Coning of wheels, tilting of rails, Gradient and its types, Super       |       |       |
| elevation limits of Super elevation on curves, cant deficiency negative   |       |       |
| cant, grade compensation on curves                                        |       |       |
| Branching of Tracks                                                       |       |       |
| Definition of point and crossing, a simple split switch turnout           |       |       |
| consisting of points and crossing lines. Sketch showing different         |       |       |
| components, their functions and working. Line sketches of track           |       |       |
| junctions-crossovers, scissor cross over, diamond crossing, triangle.     |       |       |

# NOTE:

> Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.

# > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

In search of precision and accuracy surveyor has to use more precise instruments like transit theodolite, micro optic theodolite, digital theodolite, total station and digital planimeter. Being a versatile instrument theodolite can be used more precisely for all civil engineering survey works. After studying theodolite survey student will able to precisely measure horizontal and vertical angles and calculate coordinates of various stations. After studying components of curve students will able to set the curve.

After studying Tacheometry student will able to find horizontal distances and elevations of various stations. After studying contouring student will able to prepare and interpret contour map.

With the use of planimeter student will able to calculate area of contour and volume occupied. It is intended to abreast with new technology for which study and use of Total station becomes inevitable.

Geographical Information System (GIS) is rapidly used in technological field which intend to assess real-world problems. GIS backed by modern computers allow us to benefit from visual power of maps. It is the time demand to nurture civil engineers with latest surveying technology.

#### **General objectives**

#### Students will be able to:

- Understand handling and use of various survey instruments for field observations.
- Understand linear and angular measurements
- Select suitable instruments and appropriate method of survey.
- Understand the preparation of maps from the field observations.
- Interprete survey maps.

# Theory:

| Topic and Contents                                                                                             | Hours | Marks |
|----------------------------------------------------------------------------------------------------------------|-------|-------|
| Topic 1. Contouring                                                                                            |       |       |
| Specific objectives :                                                                                          |       |       |
| State the meaning of contour, contour interval and horizontal equivalent.                                      |       |       |
| Carry out contouring by direct and indirect method                                                             |       |       |
| > Interpret features of ground from contour map                                                                |       |       |
| Contents:                                                                                                      |       |       |
| • Concept of contour contour interval and horizontal equivalent                                                |       |       |
| Factors affecting contour interval Characteristics of contours                                                 | 06    | 14    |
| Interpretation of ground features from contour man. Uses of contour                                            | 00    | 14    |
| map                                                                                                            |       |       |
| Mathada of contouring Direct method and Indirect method (block                                                 |       |       |
| • Methods of contourning, Direct method and multect method (block                                              |       |       |
| contouring, Longitudinal and cross sectioning) interpolation of                                                |       |       |
| contour and its methods,                                                                                       |       |       |
| • Concept of grade contour, Establishing grade contour on ground,                                              |       |       |
| Locating grade contour on contour map.                                                                         |       |       |
| Topic 2. Area and Volume Measurement                                                                           |       |       |
| Specific objectives :                                                                                          |       |       |
| Measure the area of plans/maps.                                                                                |       |       |
| Compute the volume                                                                                             |       |       |
| Contents:                                                                                                      |       |       |
| • Instruments used for measuring the area- Polar Planimeter and Digital                                        | 04    | 10    |
| Planimeter, Polar Planimeter- Component parts and procedure of                                                 |       |       |
| measurement of area. Simple numerical problems.                                                                |       |       |

#### **Practicals:**

Skills to be developed:

# Instructions: Intellectual Skills:

- Understand different instruments for linear measurement and leveling.
- Understand the method of taking observations with the survey instruments.
- Understand specific use of various types of survey instruments.
- Identify the errors of the survey instruments.

# Motor Skills:

- Measure distances, Bearings and finding Reduced Levels with various survey instruments.
- Recording of survey field data collected in Field Book and Leveling Book.
- Prepare drawing (plans/maps) using survey data.
- Reading and Interpretation of drawing (plans/maps).

# **List of Practicals:**

- Group size for survey practical shall be about five students.
- Each teaching staff shall handle maximum two groups.
- Students shall record the observations in Field Book at field itself.
- One full day per project is required for project survey work.
- Drawing and plotting should be considered as a part of practical.
- Term work shall consists of record of all practicals and projects in field book and drawing sheets for the given projects.
  - 1. Carry out Block contouring of plot 30 m x 30 m with each block 5mx5m
  - 2. Locate a contour on a field by direct contouring method.
  - 3. To find area of given contour map with polar planimeter and digital planimeter
  - 4. Understanding different components of transit theodolite, Temporary adjustment and reading the vernier and recording it.
  - 5. Measurement of horizontal angle by transit theodolite (direct method)
  - 6. Measurement of horizontal angle by transit theodolite (repetition method)
  - 7. Measurement of magnetic bearing by transit theodolite
  - 8. Measurement of deflection angle by transit theodolite
  - 9. Measurement of vertical angle by transit theodolite
  - 10. Find constants of tacheometer
  - 11. To find horizontal distance and elevation of given object with tacheometer

- 12. Measure horizontal and vertical angle with micro-optic theodolite
- 13. Measure horizontal and vertical angle with digital theodolite
- 14. Use total station for measuring horizontal angle, vertical angle, horizontal distance, sloping distance, vertical distance.
- 15. Layout with total station
- 16. Setting curve by offset from long chord method
- 17. Setting curve by Rankine's deflection angle method

# **Mini Projects:**

- 1. Carry out Block contouring project for a plot 100mx120m with a block size 10mx10m plot the contours on imperial drawing sheet.
- 2. Theodolite survey for a closed traverse (5-6) sides and locating the details of buildings. Plotting the Gale's table and traverse on A1 size imperial drawing sheet.
- 3. Carry out block contouring using total station for a plot of 100x120 meter with block size of 5 m x5m on sloping ground and locate the building layout up to 100 square meter on site. Prepare the contour map and centre line plan on A-1 size imperial sheet.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Geotechnical engineering is the important for every structure, since all structures rest on soil. The stability of these structures depends upon behavior of soil and bearing capacity of soil to carry loads under different loading conditions. Formation of soil and rocks, defects in rocks, soil behavior, and soil as an engineering material are essential parameter to an engineer. The design of foundation of buildings, dams, towers, embankments, roads, railways, retaining walls, bridges is mainly governed by these above stated parameters.

The content of this subject are also useful in designing basement, underground tank and underwater structures. Knowledge of geology, soil characteristics, and stress distribution under loading on soil, bearing capacity of soil is also useful to every engineer in the design, execution and stability analysis of structures.

# **General Objectives:**

#### Students will be able to

- 1) Know types of rocks and their formation, ground water table, detail investigation, mineralogy, earthquake forces and their effects.
- 2) Understand the structure and sub soil strata of earth.
- 3) Understand the causes and effects of earth quake
- 4) Understand soil properties and interpretation of results of test on soil.
- 5) Understand the suitability of foundation based on soil condition at site.
- 6) Know importance of shear strength, bearing capacity, stability of slopes and techniques of stabilization of soil.

#### **Theory:**

# Practicals: Skills to be developed:

# **Intellectual Skills**:

- 1. Identify type of rocks and mineral.
- 2. Identify properties of soil.
- 3. Interpret test results.
- 4. Understand IS procedure of testing.

# **Motor Skills:**

- 1. Measure the quantities accurately.
- 2. Handle the instruments carefully.

# List of Practicals:-

- 1. Identity different rocks specimen.
- 2. Prepare chart of different mineral families with physical properties.
- 3. (A) Determine water content of given soil sample by oven drying method as per I.S. 2720 part- II

# And

- 3. (B) Determine specific gravity of soil by pycnometer method as per I.S. 2720 part- III.
- 4. (A) Determine dry unit weight of soil in field by core cutter method as per I.S. 2720 part-XXIX.

# <u>OR</u>

- 4. (B) Determine dry unit weight of soil in field by sand replacement method as per I.S. 2720 part- XXVIII.
- 5. Determine Liquid Limit and Plastic Limit of given soil sample as per I.S. 2720 part- V.

- 6. Determine grain size distribution of given soil sample by mechanical sieve analysis as per I.S. 2720 part- IV.
- 7. (A) Determine co efficient of permeability by constant head test as per I.S. 2720 past- XVII

#### <u>OR</u>

- 7. (B) Determine co efficient of permeability by falling head test as per I.S.
- 8. (A) Determine shear strength of soil by direct shear test as per I.S. 2720 part- XIII

#### <u>OR</u>

- 8. (B) Determine shear strength of soil by vane shear test as per I.S. 2720 part- XXX
- 9. Determine MDD and OMC by standard proctor test of given soil sample as per I.S. 2720 part- VII.
- 10. Identify and classify soil by conducting field tests-Visual inspection, Dry strength test, Dilatancy test and Toughness test. (Organize visit to construction site)

**Note:** For experiments 4, 7 and 8, divide batch in two sub groups and allot experiment 'A' to one sub group and 'B' to other sub group .

Course Name : Civil Engineering Group Course Code : CE/CS/CR/CV Semester : Fourth Subject Title : Hydraulics

Subject Code : 17421

# **Teaching and Examination Scheme:**

| Teaching Scheme |    |    | Examination Scheme |     |     |    |     |       |
|-----------------|----|----|--------------------|-----|-----|----|-----|-------|
| TH              | TU | PR | PAPER<br>HRS       | TH  | PR  | OR | TW  | TOTAL |
| 03              |    | 02 | 03                 | 100 | 25# |    | 25@ | 150   |

# NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

# **Rationale:**

Hydraulics is a branch of engineering science which deals with behavior of liquids at rest as well as in motion. It forms the basis of core engineering subjects like Irrigation Engineering, Bridge Engineering and Inland water transport.

Problems in the field of water supply, irrigation, navigation can be solved by applying principles of Hydraulics.

Physical properties of water will be useful in the analysis of the flow of water through pipes, open channels.

The measurement of flow through pipe and open channel will be useful in the design of water supply system, design of irrigation channels and assessment of water charges for water supply and filed of irrigation.

The measurement of flow in open streams, flow over the spillways will be useful for regulation of flood discharge.

The empirical formulae developed in hydraulics are useful in solving engineering problems.

Thus this subject will help students in the hydraulic design of various civil engineering structures.

# General Objectives:

The students will able to:

- 1. Understand principles of pressure measuring devices and computation of hydrostatic pressure and center of pressure
- 2. Identify the types of fluid flow.
- 3. Estimate the loss of head for flow through pipes.
- 4. Estimate the diameter of pipes for different arrangements of pipes.

- 5. Design most economical channel section.
- 6. Estimate the discharge over weirs and notches.
- 7. Understand the velocity of flow in open streams as well as in pipes.
- 8. Decide horse power of pump and selection of pump.

# Theory:

# **Practicals:**

Skills to be developed

**Intellectual Skills:** 1) Interpret test results

- 2) Calculate parameters
- 3) Interpret graphs

Motor Skills: 1) Observe and measure different parameters and record accurately

- 2) Operate the equipments
- 3) Handle various apparatus
- 4) Draw graphs

# **List of Practicals:**

- 1. Measure pressure head and pressure intensity by using piezometer and simple U-tube manometer and demonstrate Bourdon's tube pressure gauge for measurement of positive and negative gauge pressure.
- 2. Measure pressure difference by using differential U-tube manometer and inverted U tube differential manometer.
- 3. Calculate total head at different cross sections of a given pipe to verify Bernoulli's theorem.
- 4. Identity type of flow through a pipe using Reynolds's apparatus.
- 5. Determine friction factor for given pipes of different diameters using Darcy weisbach equation.
- 6. Determine minor losses of head due to sudden enlargement, sudden contraction, bend and elbow in pipe.
- 7. Calculate chezy's and Manning's constant for a given rectangular tilting flume and demonstrate Hydraulic jump.
- 8. Determine coefficient of discharge for a given Venturimeter.
- 9. Determine coefficient of discharge for a given rectangular and triangular notch.
- 10. Determine Hydraulic coefficients for small circular sharp edged orifice.
- 11. Determine Hydraulic coefficients for small circular sharp edged orifice.
- 12. Understand construction and working of centrifugal and reciprocating pumps with the help of model of charts and collect catalogues of pumps and use it for selection of pump for design discharge and head.

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Civil engineering structures are mainly made-up of column, Beam and Slabs and these structures are subjected to axial as well as eccentric loading. These structures may be determinant or indeterminate in nature. The members like fixed beam, continuous beam, portal frame are indeterminate structures.

The content on calculations of actual shear stresses, bending moments and deflections which are developed in various structural members will be useful in analyzing the forces in these members which is further useful in design of these members. Analysis of member for deflection, combined direct and bending stresses will be useful in safe design of various structural members.

Thus the total contents of this subject forms the basic for the efficient and safe design of steel and RCC structures.

#### **General Objectives:**

The students will be able to-

- 1. Understand the stresses in the members due to eccentric load and wind pressure
- 2. Understand shear force and bending moment diagram for Fixed and continuous beams for various external loading on them.
- 3. Understand the shear force and bending moment diagrams for beams subjected to point load and uniformly distributed load.
- 4. Understand analysis of forces in various members of steel roof trusses for different spans.

# **Theory Content:**

| Topic and Contents                                                                                                                             | Hours | Marks |
|------------------------------------------------------------------------------------------------------------------------------------------------|-------|-------|
| Topic 1: Direct and Bending Stresses                                                                                                           |       |       |
| Specific Objectives:                                                                                                                           |       |       |
| <ul> <li>List direct and eccentric loads on columns.</li> </ul>                                                                                |       |       |
| Write conditions of no tension for beams, columns and pillars.                                                                                 |       |       |
| Draw stress distribution diagram at bases of column, pillars and                                                                               |       |       |
| chimneys subjected to wind pressure.                                                                                                           |       |       |
| Contents: (12 Marter)                                                                                                                          |       |       |
| 1.1                                                                                                                                            |       |       |

# **Tutorial:**

Questions from any two old QP shall be given for tutorial on each topic. Students shall solve these problems in a separate note book. The staff member shall assess these work batchwise.

#### **Rationale:**

Drawing is a language of engineers and in the era computers, engineers prepare most accurate and descent presentation of plans to satisfy the clients. It has become the practice to prepare the drawing with the help of computer. This not only saves time, but also provides scope for immediate improvements, changes in the drawings. From the aesthetic point of view also the drawings give better presentations. Therefore, use of computer software's (Auto Cad, Felix Cad, Auto Civil) will enable Civil Engineers to prepare quality drawing in shortest possible time. Hence, it becomes mandatory for the students of Diploma in Civil Engineering to possess drafting skills with the help of software.

#### **General Objectives:**

The students will be able to -

- 1) Use different CAD commands for drawing
- 2) Prepare line plans with CAD Software
- 3) Prepare Submission drawing/ working drawing of buildings.

#### To develop following skills: Intellectual Skills:

- Read and interpret building drawing
- Plan residential and public building as per requirement

#### **Motor Skills:**

- Prepare line plan for residential and public building
- Draw developed plan, elevation, section, site plan, foundation plan,
- Prepare schedule of openings, area statement

#### MSBTE - Final Copy Dt. 30/08/2013

#### **Theory:**

#### **Rationale:-**

Most of the diploma holders join industries. Due to globalization and competition in the industrial and service sectors the selection for the job is based on campus interviews or competitive tests.

While selecting candidates a normal practice adopted is to see general confidence, attitude and ability to communicate and attitude, in addition to basic technological concepts.

The purpose of introducing professional practices is to provide opportunity to student to undergo activities which will enable them to develop confidence. Industrial visits, expert lectures, seminars on technical topics and group discussion are planned in a semester so that there will be increased participation of students in learning process.

### **Objective:**

### To develop the following Skills:

#### **Intellectual Skills**

- 1. Understand construction of different Civil Engineering works through visits.
- 2. Understand the techniques of collecting different data.
- 3. Understand the Presentation for giving the seminar.

#### **Motor Skills**

- 1. Write report on various field visits to the construction sites.
- 2. Present the seminar.

#### **Learning Structure:**

#### Activities

| Activity<br>No. | Content                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |    |  |  |  |  |  |  |

|                 | iii) | Soil Investigation at a site to find out the Bearing capacity      |       |
|                 | iv)  | A week program on Construction site and prepare a detail           |       |
|                 |      | report                                                             |       |
| 5               | v)   | Student shall collect the information by visiting Electrical /     | 12    |
|                 |      | Electronics Engineering dept. about the material required for      |       |
|                 |      | wiring and switches - lamps, fans, boards their materials and      |       |
|                 |      | capacities, systems of wiring and material used, control switches, |       |
|                 |      | fuse, etc.                                                         |       |
|                 | vi)  | Student shall collect the information by visiting Mechanical       |       |
|                 |      | Engineering department and study the mechanical devices like       |       |
|                 |      | pumps                                                              |       |
|                 |      | Total                                                              | /18   |

List of assignments to be done by each student as term work (Group of 5-6 students shall be prepared and each group shall be given different activity.

# 1. Field Visit:

Industrial visit to be arranged for class / batch. Students are expected to observe and collect data. Finally prepare a visit report. Report of three industrial visits,

# 2. Expert Lectures:

Expert lecture to be arranged at institute for the class. Student should attend and prepare the keynote of it as a part of term work. Report of two expert Lecture

# 3. Data Collection:

Students are expected to collect data from various sources under the guidance of faculty member and submit the report for the term work. Data collection report on two topics.

# 4. Seminar:

Each student should select the topic of his own interest from the list and prepare and present the seminar on it and submit the hard copy as a term work.

# 5. Mini Project:

Form a group of 4 to 5 students. Each group shall select a topic from the given list. Submit a report of 8-10 pages with sketches, photographs, diagrams, statements etc. as a part of term work.

# Learning Resources:

Reference Book, Journal, Exhibitions, Seminar Papers.

- 1. How to write a report
- 2. How to prepare seminar
- 3. Effective Listening.

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

#### INDUSTRIAL TRAINING (OPTIONAL)

#### Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

Student Contact Hours Per Week: 34 Hrs.

# THEORY AND PRACTICAL PERIODS OF 60 MINUTES EACH.

#### Total Marks: 900

@ Internal Assessment, # External Assessment, \$ Common to All Conventional Diploma, \_\_\_\_\_\_ No Theory Examination, \*\* Industrial Training for six weeks to be completed during summer break after Fourth semester. Assessment to be done in Fifth Semester.

Abbreviations: TH-Theory, TU- Tutorial, PR-Practical, OR-Oral, TW- Termwork, SW- Sessional Work.

- Conduct two class tests each of 25 marks for each theory subject. Sum of the total test marks of all subject are to be converted out of 100 marks as sessional work (SW).
- > Progressive evaluation is to be done by subject teacher as per the prevailing curriculum implementation and assessment norms.
- Code number for TH, PR, OR and TW are to be given as suffix 1, 4, 8, 9 respectively to the subject code.

**Course Name : All Branches of Diploma in Engineering & Technology** 

# Course Code : AE/CE/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/AU/FG

Semester : Fourth

Subject Title : Environmental Studies

Subject Code : 17401

**Teaching and Examination Scheme:** 

| Teac | ching Scl | neme |              |      |    |    |     |       |
|------|-----------|------|--------------|------|----|----|-----|-------|
| TH   | TU        | PR   | PAPER<br>HRS | TH   | PR | OR | TW  | TOTAL |

#### **#\* Online Theory Examination**

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding. We are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as

overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

#### **Learning Structure:**

# Theory:

| Topic 1: Nature of Environmental Studies00Specific Objectives:> Define the terms related to Environmental Studies0104• Definition, Scope and Importance of the environmental studies0104• Definition, Scope and Importance of the environmental studies0104• Importance of the studies irrespective of course• Need for creating public awareness about environmental issues0104Topic 2: Natural Resources and Associated ProblemsSpecific Objectives:> Define natural resources and identify problems associated with them<br>> Identify alternate resources and their importance for environmentContents:2.1 Renewable and Non renewable resources• Definition<br>• Associated problems04102.1 Renewable and Non renewable resources• Definition<br>• Associated problems04102.2 Water Resources• Effects on environment due to deforestation, Timber extraction, Building of dams, waterways etc.04102.3 Water Resources• Effect of floods, draught, dams etc. on water resources and community04102.4 Mineral Resources:• Categories of mineral resources<br>• Basics of mining activities<br>• Mine safety0410                                                                                                                                                                                                                                                                                                                         |

### **Practical:** Skills to be developed:

### **Intellectual Skills**:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

#### **Motor Skills:**

- 1. Presentation Skills
- 2. Use of multi media

### List of Projects:

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds
- 4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

The chemical processing of textiles is a value addition process by way of enhancing the aesthetic properties through dyeing and printing. In the second year of this course, the students are taught about the dyeing and printing of textiles with various types of dyes and pigments along with different methods, and styles. The students are also made acquainted with the operations of the machines involved in these processes. In general this subject is devised to impart the knowledge and skills in the areas of dyeing and printing of the textiles.

#### **General Objectives:**

The students will be able to: -

- Get the basic concepts in dyeing of cellulosic material
- Know the technology of dyeing of cellulosic material with various classes of dyes. Differentiate the various dyeing techniques and their advantages and disadvantages.
- Understand construction and working of various dyeing machines used for cellulosic dyeing.

#### **Learning Structure:**

|    | Semi continuous and Continuous Dyeing Machines            |    |     |
|    | Total                                                     | 64 | 100 |

# **Practicals:**

Skills to be developed Intellectual Skills: The student will learn

- 1) Understand dying process.
- 2) Learn after treatments.
- 3) Learn dyeing machine.

#### Motor Skill:

The student will learn

- 1) Dyeing if cellulosic & protein fibre with different dyes.
- 2) To operate dyeing machine.

### List of Experiments:

- 1. Dyeing of cotton with direct dye
- 2. After treatment with direct dyed goods
- 3. Dyeing of cotton with hot brand & HE brand reactive dyes
- 4. Dyeing of cotton with ME & ramazol reactive dyes
- 5. Dyeing of cotton with vat dyes
- 6. Dyeing of cotton with sulphur dye
- 7. After treatments of sulphur dyed goods
- 8. Dyeing of cotton with azoic colours
- 9. Dyeing of wool & silk with basic dye
- 10. Dyeing of wool & silk with acid dye
- 11. Dyeing of wool & with metal complex dye
- 12. Dyeing of cotton fabric with reactive dyes by semi-continuous dyeing method.
- 13. Dyeing of cotton fabric with reactive dyes by continuous dyeing method.

#### **Implementation Strategies:**

The teaching learning will involve many methods such as: Class room lectures with questions and answers, mill visits, discussions, exercises, practices assignments etc. The classroom & practice sessions will be enriched by industry-based materials in the form of photographs, slides, transparencies, video programs and computer based programs.

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

The chemical processing of textile is a value addition process by way of exhausting the aesthetic properties through printing and other processes. The students will be acquainted with the operation of printing. In general this subject will impact knowledge and skills in the areas of printing of textile fabrics.

### **Objectives:**

The students will be able to:

- Get the basic concepts in printing of fabrics.
- Know the technology of printing, different techniques of printing, their advantages and disadvantages.
- Understand construction and working of various printing machines.

#### **Learning Structure:**

# **CONTENTS:** Theory

| Chapter | Name of the Topic                                                       | Hours | Marks |
|---------|-------------------------------------------------------------------------|-------|-------|
|         | Introduction to Textile Printing                                        |       |       |
|         | Specific Objectives: Student will be able to understand                 |       |       |

|   | <ul> <li>Printing with direct dye – Print paste formulation for direct style of printing and discharge style of printing.</li> <li>Printing with reactive dye - Print paste formulation for</li> </ul> |    |     |

#### **Practical:**

#### Skills to be developed:

#### **Intellectual Skills:**

- 1) Understand screen preparation.
- 2) Understand printing process.
- 3) Learn different styles of printing.

#### **Motor Skill:**

- 1) Drawing a design & prepare screen of same.
- 2) Direct, discharge & resist style of printing.

#### **List of Practicals:**

- 1) Preparation of screen for printing.
- 2) Develop Tie & dye effect on cotton fabric.
- 3) Develop batik effect on cotton fabric.
- 4) Application of direct dye on cotton by direct style of printing.
- 5) Application of reactive dye on cotton by direct style of printing.
- 6) Application of azoic colour on cotton by direct style of printing.
- 7) Develop magic style of printing, crimp style of printing effects on cotton.
- 8) Obtain White & colour discharge effects on cotton using direct and reactive dyes.

- 9) Obtain azoic colour discharge effect on direct dyed ground.
- 10) Obtain White & colour resist effect on reactive dyed ground.
- 11) Printing of Silk using acid dyes.

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

The word textile finishing defines a series of processing operations applied to grey fabrics to enhance their appearance and hand, properties and possible applications. The term functional finishing with reference to all the mechanical or chemical finishing operations carried out on fabrics already bleached, dyed or printed to further enhance their properties and possibly add some new ones.

The terms finishing and functional finishing are therefore similar and both play a fundamental role for the commercial excellency of the results of textiles, strictly depending on market requirements that are becoming increasingly stringent and unpredictable and permit very short response times.

#### **Objectives:**

The students will be able to: -

- Know the basic concepts and types of finishing
- Have the knowledge of various formulations of different functional finishes.
- Study the functional finishes.

#### **Learning Structure:**

#### List of Experiments:

- 1. Preparation and application of Blue Tone and Red Tone on cellulosic.
- 2. Application & evaluation of various types of softeners on cotton.
- 3. Finishing of cotton for imparting soft, medium and stiff handle.
- 4. Resin finishing of cotton.
- 5. Application of OBA on Cotton by continuous & exhaust method.
- 6. Finishing of wool to impart moth proofing.
- 7. Finishing of Silk to improve softness and crease recovery property.
- 8. Application & evaluation of anti microbial finish on cotton.
- 9. Application & evaluation of flame retardant finishing on cotton.
- 10. Application & evaluation of waterproof / Water repellent Finishing on cotton.

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- Total of tests marks for all theory subjects are to be converted out of 100 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rational:**

This subject intends to provide a self-contained introduction and back ground of cognate topics of fluid or momentum transfer, heat transfer, and mass transfer. The chemical processing of textile is very diverse in nature and involves the transfer of the fluid material from one place to other for its use in the machines. The technologists in this industry should have the basic understanding of the principles of fluid flow, heat transfer and mass transfer in order to control the process by operating it to an optimum level.

#### **Objectives:**

The student will be able to:

- Learn basics of the unit operations of Chemical Engineering.
- Understand the importance of the subject to textile industry.
- Apply the knowledge of the subject to textile industry practices.

#### **Learning Structure:**

# **CONTENTS:** Theory

| Chapter | Name of the Topic                                                                                                                                                                                                 | Hours | Marks |
|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|-------|
|         | Unit Systems And Introduction to Fluid Flow                                                                                                                                                                       |       |       |
|         | Specific Objectives: Student will be able to understand                                                                                                                                                           |       |       |
|         | Different unit systems and conversions                                                                                                                                                                            |       |       |
|         | Properties of fluids & their variations                                                                                                                                                                           |       |       |
|         |                                                                                                                                                                                                                   |       |       |
|         | • Review of various unit systems.                                                                                                                                                                                 |       |       |
| 01      | • Study of units and conversions of some of the important                                                                                                                                                         | 07    | 10    |
| 01      | physical quantities.                                                                                                                                                                                              | 07    | 12    |
|         | • Introduction & importance of fluid flow studies to textiles.                                                                                                                                                    |       |       |
|         | • Definition of fluid, study of fluid properties like density,                                                                                                                                                    |       |       |
|         | viscosity, statement of Newton's Law of Viscosity,                                                                                                                                                                |       |       |
|         | • Definition of compressible, incompressible, real & ideal                                                                                                                                                        |       |       |
|         | fluids.                                                                                                                                                                                                           |       |       |
|         | Study of rheology of Non Newtonian fluids.                                                                                                                                                                        |       |       |
|         | Study of Fluids In Motion                                                                                                                                                                                         |       |       |
|         | Specific Objectives: Student will be able to understand                                                                                                                                                           |       |       |
|         | Various flow equations & their significance                                                                                                                                                                       |       |       |
|         | Material & energy balances                                                                                                                                                                                        |       |       |
|         |                                                                                                                                                                                                                   |       |       |
| 02      | • Reynolds Experiment for fluid flow through pipes.                                                                                                                                                               | 05    | 12    |
|         | • Equation of continuity and Bernoulli's Equation                                                                                                                                                                 | 00    | 12    |
|         | (Only expressions no derivation) with the significance of the                                                                                                                                                     |       |       |
|         | equations.                                                                                                                                                                                                        |       |       |
|         | • Concept of energy losses & friction factor (no derivations &                                                                                                                                                    |       |       |
|         | no numerical)                                                                                                                                                                                                     |       |       |
|         | • Pipe Fittings: Types & Purpose                                                                                                                                                                                  |       |       |
|         | I ransportation of Fluids And Measurements of Fluid Flow:<br>Specific Objectives: Student will be able to                                                                                                         |       |       |
|         | Specific Objectives: Student will be able to                                                                                                                                                                      |       |       |

#### **Teaching and Examination Scheme:**

| Teaching Scheme |    |    |               |     | Examinati | on Scheme |     |       |
|-----------------|----|----|---------------|-----|-----------|-----------|-----|-------|
| TH              | TU | PR | PAPER<br>HRS. | TH  | PR        | OR        | TW  | TOTAL |
| 03              |    | 02 | 03            | 100 |           |           | 25@ | 125   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 100 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Variety of raw materials for textile manufacturing are used, such as cotton, silk, synthetic fibers, etc. These raw materials are being used individually or mixed in different proportions to form a yarn of desired quality. The raw materials can be tested for numerous characteristics like fiber length, fineness, strength, maturity etc. Intermediate products like sliver, roving etc. are also required to be tested for controlling the process, for optimizing the process parameters or for developing existing process. Finally, to ensure the quality product, final product that may be yarn, fabric or garment, testing is imperative. This subject intends to equip students with the concepts, principles and methods of testing of various textile fiber, yarns and fabric, which is helpful in selection of raw materials, process control, process optimization, quality assurance and research purpose.

Since textile is system of mass production and contains lots of variations, lot of experimentation is required. Results obtained from specific number of observations are to be analyzed, interpreted and used for best outcomes. Therefore, students are equipped with the methods to analyze the testing results statistically.

### General objectives:

- 1. Understand principle & concept of Testing of Yarns / Fabric
- 2. Measure Count, Twist, Evenness and Strength of yarn.
- 3. Measure strength, cover factor, air permeability of fabric.
- 3. List standard methods used for testing textile material.
- 4. Define various terms used in yarn & fabric testing.
- 5. Correlate the result of the tests to the application of material.
#### **Learning Structure:**

## Skills to be developed

## 1) Intellectual Skills:

- 1. Proper selection of measuring instruments depending upon the data and precision required.
- 2. Analyze properties of matter & their use for the selection of material.
- 3. To interpret the results from observations and calculations.
- 4. To use these results for corrective actions in mechanical and wet processing.

## 2) Motor Skills:

- 1. Proper handling of instruments.
- 2. Measuring physical properties of yarn and fabric accurately.
- 3. To observe the phenomenon and to list the observations in proper tabular form.
- 4. To adopt proper procedure while performing the experiment.

#### **Practical:**

#### Skills to be developed:

#### **List of Practical:**

- 1. Determination of yarn count.
- 2. Determination of twist in single and doubled yarn.
- 3. Determination of breaking load and elongation of yarn.
- 4. Determination of lea strength & count strength product (CSP) of cotton yarn
- 5. Determination of tensile strength of fabric.
- 6. Determination tearing strength of fabric.
- 7. Determination of fabric stiffness.
- 8. Determination of drape of fabric.
- 9. Assessment of abrasion resistance and pilling propensity of fabric.

#### **Rationale:**

Most of the diploma holders join industries. Due to globalization and competition in the industrial and service sectors the selection for the job is based on campus interviews or competitive tests.

While selecting candidates a normal practice adopted is to see general confidence, ability to communicate and their attitude, in addition to basic technological concepts.

The purpose of introducing professional practices is to provide opportunity to students to undergo activities which will enable them to develop confidence. Industrial visits, expert lectures, seminars on technical topics and group discussion are planned in a semester so that there will be increased participation of students in learning process.

#### **Objectives:**

Student will be able to:

- 1. Acquire information from different sources.
- 2. Prepare notes for given topic.
- 3. Present given topic in a seminar.
- 4. Interact with peers to share thoughts.
- 5. Prepare a report on industrial visit, expert lecture.

#### **Learning Structure:**

| 1          | ii) Auxiliary manufacturing unit                                                | 14    |
|            | iii) Research unit.                                                             |       |
|            | iv) Quality testing unit.                                                       |       |
|            | v) Machine manufacturing unit                                                   |       |
|            | vi) Dyeing & Printing Unit                                                      |       |
|            | Lectures by Professional / Industrial Expert lectures to be organized from      |       |
|            | any two of the following areas:                                                 |       |
|            | i) Interview Techniques.                                                        |       |
| 2          | ii) Energy conservation in textile.                                             | 06    |
|            | iii) Non conventional energy sources.                                           |       |
|            | iv) Woven and knit goods continuous processing & machines.                      |       |
|            | v) Nanotechnology.                                                              |       |
|            | Information Search:                                                             |       |
|            | Information search can be done through manufacturer's catalogue,                |       |
|            | websites, magazines, books etc. and submit a report any one topic.              |       |
|            | Following topics are suggested :                                                |       |
| 3          | i) Advances in chemicals & Auxiliaries.                                         | 08    |
|            | ii) Latest trends in wet processing.                                            |       |
|            | iii) Steam consumption & water consumption in processing machine.               |       |
|            | iv) Right first time technique in processing.                                   |       |
|            | v) Maintenance procedure for effluent treatment plant.                          |       |
|            | Seminar :                                                                       |       |
|            | Seminar topic shall be related to the subjects of fourth semester. Each student |       |
| 4          | shall submit a report of at least 10 pages and deliver a seminar (Presentation  | 10    |
|            | time - 10 minutes)                                                              |       |
|            | Mini Project / Activities : (any one)                                           |       |
|            | a) Conventional process study of any one machine in dveing.                     |       |
|            | b) Conventional process study of any one machine in printing.                   |       |
| 5          | c) Conventional process study of any one machine in bleaching.                  | 10    |
|            | d) Sketch and working of analytical instrument like spectrophotometer or        | 10    |
|            | microscope.                                                                     |       |
|            | e) Literature survey of any one given topic.                                    |       |
|            | Total                                                                           | 48    |

Course Name : Diploma in Textile Technology Course Code : TC Semester : Fourth Subject Title : Industrial Training

Subject Code : 17053

## **Teaching and Examination Scheme:**

| Tea | ching Sch | ieme |               |    | Examinati |    |    |       |
|-----|-----------|------|---------------|----|-----------|----|----|-------|
| TH  | TU        | PR   | PAPER<br>HRS. | TH | PR        | OR | TW | TOTAL |
|     |           | **   |               |    |           |    |    |       |

\*\* Industrial training for six weeks to be completed during summer break after Fourth semester. Assessment to be done in Fifth Semester

## **Objectives:**

- Experience the industrial environment for textile industrial processes, equipment & practices.
- Collect data about Plant lay out, equipment and machines-specifications and working available in different sections and collect data.
- Experience operation of machines and process parameters of spinning and weaving departments for the target production and collect data.
- Appreciate factory utilities power water illumination men and material movement, pollution control, industrial safety etc.
- Carryout the material testing at different stages of yarn and fabric production for quality.
- Experience maintenance schedules of all the equipment and collect information on the effects of negligence of maintenance.
- Diagnose problems and find solutions to problems related with operation, and maintenance of equipment.
- Study the organization structure, job description, job specifications, promotional schemes, motivational strategies, etc.
- Collect data on production incentives, methods study and time & motion studies.
- Critical study of all activities with a view to find the areas for improvement.
- Devise solution to problem areas.
- Collect information / data for project work and seminars.

However, the detailed list of areas of study, working and data collection has been prepared and is enclosed in **3.5** – **Specific area of study and working.** The student should regularly refer to this list and accordingly choose the areas and acquire the knowledge information and skills.

## **3.2 General Guidelines**

- The students have to undergo industrial training in chemical processing departments of fabric / yarn / garment for 6 weeks in between fourth and fifth semesters.
- The student has to maintain a daily diary, in which they will record the daily achievements, which should be countersigned by the industry officer.
- The student should carry out the critical study of different activities and try to locate the problem or problems in any of the areas of product quality, productivity, efficiency, cost control and cost reduction, etc. Then, he should try to devise solutions to such problem.
- After completion of training each student has to bring the certificate for the entire duration for satisfactory completion of training.
- The student will be required to submit a report in handwritten, which will be properly bound.
- The students will be examined through viva-voce by the internal and external examiners. (The external examiner should be from industry).

## **3.3 Maintenance of Daily Diary**

The students are required to maintain a daily diary, regularly in systematic manner. After the completion of day's work the important information is recorded clearly as per the instructions of section in charge and get it signed daily by him. Write in brief about observations made, daily work problems / project/s undertaken, discussion held, instructions given by section in charge, literature consulted, data etc.

## 3.4 Evaluation of daily diary

Term work assessment is based on daily diary maintenance, attendance, remarks of industry. Term-work Marks will be given on the basis of evidence of diary maintenance, adequacy and quality of record.

## 3.5 Specific areas of study and working: -

Students are required to collect the relevant information on the specific area given below. This information should be recorded in daily diary and further used in preparing the Final Report.

## (a) General Information

- 1. Name of mill, address, and year of establishment.
- 2. Type of organization, growth in terms of investment, assets, employment, sales, turnover, product diversification, technological development.
- 3. Training orientation programmer of the organization.
- 4. Employee's welfare schemes like PF, Medical, Canteen, Training, Recreation facilities etc.
- 5. Detailed lay out of the mill, number of spindles, warp weft, doubling, and total number of looms. (Non-automatic, automatic and total.)
- 6. Yarn counts spun-warp and weft. Average count of the yarn used.
- 7. Details of shifts: shift wise technical staff & number of workers in processing.
- 8. Quantity of fabrics produced in sq. meters. Quantity of fabrics exported in sq. meters. Types of finish given.
- MSBTE Final Copy Dt. 30/08/2013

#### 17053 TC4

9. Brief study of activities in quality control department.

## (b) Grey Checking

- 1. Lay out plan, lighting scheme and fire prevention methods.
- 2. Handling and transportation of fabric.
- 3. Methods of checking.
- 4. Classification of faults.
- 5. Segregation of various sorts.
- 6. Process control exercised in gray checking.
- 7. Labour complement.
- 8. Power requirements.
- 9. Operative hours and production.

## (c) Desizing

- 1. Lay out plan, lighting scheme and fire prevention methods.
- 2. Handling and transportation of fabric.
- 3. Type of desizing.
- 4. Desizing recipe and duration.
- 5. Labour complement.
- 6. Details of machineries used in desizing, if any.
- 7. Operative hours and production.
- 8. Water and steam consumption.
- 9. Power requirements.
- 10. Process control exercised in desizing.
- 11. Quality Control in desizing.
- 12. Costing.

#### (d) Scouring

- 1. Layout plan, lighting scheme and fire prevention methods.
- 2. Handling and transportation of fabric.
- 3. Types of scouring.
- 4. Scouring recipe, duration, temperature, and pressure.
- 5. Water and steam consumption.
- 6. Power requirements.
- 7. Operative hours and production.
- 8. Labour complements.
- 9. Process control followed in scouring.
- 10. Time study and work study in scouring.
- 11. Costing.

#### (e) Mercerization

- 1. Layout plan, lighting scheme and power requirements.
- 2. Handling and transportation of fabric.
- 3. Type of mercerization.

- 4. Details of mercersing agents and auxiliaries like wetting agents used in mercerization.
- 5. Study of mercerization of various sorts
- 6. Steam and water consumption.
- 7. Operative hours and production.
- 8. Labour complements
- 9. Process control followed in mercerization.
- 10. Quality control in mercerization.

## (f) Singeing

- 1. Layout plan, lighting scheme and power requirements
- 2. Handling and transportation of fabric
- 3. Type of singeing.
- 4. Operative hours and production.
- 5. Labour complement.
- 6. Process control in Singeing.

# (g) Bleaching

- 1. Layout plan, lighting scheme and power requirements.
- 2. Handling and transportation of fabric.
- 3. Type of bleaching
- 4. Study of bleaching of various sorts like Poplin, cambric, polyester, polyester/cellulosic blends, top dyed goods, terry towel etc.
- 5. Detailed study of machines used in bleaching.
- 6. Steam and water consumption.
- 7. Process control.
- 8. Quality control.
- 9. Labour complement.

# (h) Dyeing

- 1. Layout plan, lighting scheme and power requirements.
- 2. Handling and transportation of fabric.
- 3. Detailed of dyeing machines like jigger, jet-dyeing machine, winch, padding mangle, beam dyeing, loose fibre dyeing machine, etc.
- 4. Steam and water consumption.
- 5. Labour complement.
- 6. Process control in jigger dyeing, HTHP beam dyeing, jet dyeing, winch dyeing, fibre dyeing and cheese dyeing.
- 7. Quality control in dyeing.

# (i) Printing

- 1. Layout plan, lighting scheme and power requirements.
- 2. Handling and transportation of fabric.
- 3. Detailed study of various printing machines like roller, flat bed screen-printing, and rotary screen-printing m/c.

- 4. Preparation of screen.
- 5. Steam and water consumption.
- 6. Labour complement.
- 7. Operative hours and production.
- 8. Process control in printing.
- 9. Quality control in printing.

## (j) Finishing

- 1. Lay out plan, lighting scheme and power requirements.
- 2. Handling and transportation of fabric
- 3. Detail study of finishing machines like stenter (steam and oil heated), sanforising, decatising, calendaring, felt, milling, crabbing steam calendar, finishing machines for hosiery goods.
- 4. Study of finishing of various sorts of cotton, polyester, acrylic, wool silk nylon, and their blends.
- 5. Study of axillaries used for finishing of cotton, polyester, acrylic, wool, silk, nylon and their blends
- 6. Steam and water consumption in finishing.
- 7. Labour complement.
- 8. Operative hours and production.
- 9. Process control in finishing using various machines.
- 10. Quality control in finishing.

## (k) Drying and Washing

- 1. Layout plan, lighting scheme and power requirements.
- 2. Handling and transportation of fabric.
- 3. Brief study of various dyeing & washing machine.
- 4. Steam and water consumption.
- 5. Labour complement.
- 6. Operative hours and production
- 7. Process control in drying.

## (l) Boilers, Thermopac And Effluent Treatment Plant

- 1. Layout plan, layout of machine.
- 2. Steam generation, distribution, and utilization.
- 3. Boiler feed water.
- 4. Operative hours and production.
- 5. Study of various oils used in thermopac.
- 6. Water management
- 7. Effluent treatment plant

## (m) Costing

- 1. Fabric cost sheets for some sorts. Cost of dyes, chemicals
- 2. Wages of the time rate workers and their rate in each dept.

#### w.e.f Academic Year 2012-13

- 3. Wages for piece rate workers in each dept.
- 4. Power cost.
- 5. Cost of water and steam.
- 6. Government levies classification wise.

## (n) Laboratory

- 1. Testing and analysis of dyes, chemicals, and auxiliaries used in various departments.
- 2. Testing of bleached, dyed, and fabric, with respect to fastness properties.
- 3. Methods towards inventory control.

## **Assessment Strategy**

- a) Report of the industrial training shall be prepared by each student on the basis of his/her actual work done, during the six weeks industrial training.
- b) This report should be submitted in typed and bound form within 1 month after completion of the industrial training.
- c) Industrial training should be assessed equally by external and internal examiners for the oral exam assessment.
- d) Industrial training should be assessed by internal examiner only for term work assessment.

#### **#\* Online Theory Examination**

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment

- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

## **Learning Structure:**

# Theory:

| Topic 1: Nature of Environmental Studies       01       04         Specific Objectives:       > Definition, Scope and Importance of the environment in general public       01       04         • Definition, Scope and Importance of the environmental studies       • Importance of the studies irrespective of course       01       04         • Need for creating public awareness about environmental issues       01       04         Topic 2: Natural Resources and Associated Problems       Specific Objectives:       > Define natural resources and identify problems associated with them       > Identify alternate resources and their importance for environment       04         Contents:       • Definition       • Associated problems       04         2.1 Renewable and Non renewable resources       • Definition and benefits of forest resources       04       10         2.3 Forest Resources       • Functions and benefits of forest resources       04       10         2.3 Water Resources:       • General description of forest resources and ground water       • Use and overexploitation of surface and ground water       04       10         2.3 Water Resources:       • Gategories of mining activities       • Mine safety       04       10         2.4 Mineral Resources:       • Gategories of modern agriculture       • World food problem       04       10         2.5 Food Resources:       • Food for all </th <th>Topic and Contents</th> <th>Hours</th> <th>Marks</th>                                                                                                                                                                                                                                                                                        | Topic and Contents                                                | Hours | Marks |

## Practical: Skills to be developed:

## Intellectual Skills:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

## Motor Skills:

- 1. Presentation Skills
- 2. Use of multi media

## **List of Projects:**

**Note:** Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds
- 4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

## Learning Resources: Books:

## NOTE:

- > Two tests of 25 mark each, to be conducted as per the schedule given by MSBTE.
- > Total of test marks for all theory subjects are to be converted out of 50 and to be entered in mark-sheet under the head Sessional Work (SW).

#### **Rationale:**

In the third semester, detailed study of the preparatory part of the spinning processes was covered. In Yarn Manufacturing-II carding & draw frames were discussed.

In this fourth semester, Yarn Manufacturing III - is a continuation of the detailed study of spinning process. This subject covers further part of spinning process comber preparatory and comber fly frame & ring frame. It covers the study of principles and description of these processes and functions of all machines and their parts with related information and skills.

## **Objective:**

The student will able to:

- a. Understand comber preparatory & comber fly frame & ring frame process.
- b. Draw the sketch and gearing of all above machines.
- c. Calculate draft, production of all above machines.

#### **Learning Structure**

| Topic and Contents                                                                                                             | Hours | Marks |
|--------------------------------------------------------------------------------------------------------------------------------|-------|-------|
| <b>Topic 1.</b> Study of Comber lap preparation and Comber                                                                     |       |       |
| Specific objective: The student will able to                                                                                   |       |       |
| > Understand the concept of parallelization & blending of fibers                                                               |       |       |
| $\triangleright$ Understand effect of setting & process parameters on material.                                                |       |       |
| ➤ Understand the importance of comber needles.                                                                                 |       |       |
| <ul> <li>Understand the defect in combing preparatory &amp; combing process</li> </ul>                                         |       |       |
| Content:-                                                                                                                      |       |       |
| 1.1 Introduction – Preparation to combing and comber operation                                                                 |       |       |
| 1.2 Objects of Sliver lan Ribbon I an and Super I an                                                                           |       |       |
| 1.2 Objects of Shiver hap, Roboth Lap and Super Lap.                                                                           |       |       |
| Pibbon lan and Super lan                                                                                                       |       |       |
| 1.4 Influence of lap propagation on combing, evenness of lap sheet, deposition of                                              |       |       |
| the books                                                                                                                      |       |       |
| the nooks.                                                                                                                     |       |       |
| 1.5 Causes of defective production and their remedies at above machines                                                        | 24    | 36    |
| 1.6 Calculation related to production & draft of Sliver lap & Ribbon Lap                                                       |       |       |
| 1.7 Types of Comber - Sequence of operation of rectilinear comber                                                              |       |       |
| 1.8 Technology of combing- parameters influencing the combing operation,                                                       |       |       |
| influence of the combing on quality.                                                                                           |       |       |
| 1.9 Influence of machine component and setting on combing Feed distance                                                        |       |       |
| moved per cycle, type of feed ,the detachment setting, number of points                                                        |       |       |
| on the comb, the depth of penetration of top comb, piecing.                                                                    |       |       |
| 1.10 The comb- cylinder comb, top comb, operations of comb                                                                     |       |       |
| 1.11 Drafting arrangement, waste removal                                                                                       |       |       |
| 1.12 Study of important setting and its effects on working - step gauge, distance                                              |       |       |
| gauge, top comb settings.                                                                                                      |       |       |
| 1.13 Specification of Modern Comber                                                                                            |       |       |
| 1.14 Causes and remedies of defective production at Comber                                                                     |       |       |
| 1.15 Calculation of Hank, Draft, Production ,and Noil Percentage                                                               |       |       |
| Topic 2. The study of Speed frame                                                                                              |       |       |
| Specific objective: The student will able to                                                                                   |       |       |
| Understand the concept of drafting & twisting of fibers                                                                        |       |       |
| Understand effect of setting & process parameters on material.                                                                 |       |       |
| > Understand the importance of stop motions.                                                                                   |       |       |
| > Understand the defect in Speed frame.                                                                                        |       |       |
| Content:                                                                                                                       |       |       |
| 2.1 The necessity of Speed frame.                                                                                              |       |       |
| 2.2 Description of functions of Speed frame – operating sequence, effect of                                                    |       |       |
| arrangement of bobbins in two rows.                                                                                            |       |       |
| 2.3 Operating regions of the roving- creel. Spindle and flyer -                                                                | 20    | 32    |
| Imparting twist the spindle the flyer the flyer top the presser arm                                                            |       |       |
| 24 Winding of the bobbin Elver leading and bobbin leading its comparison                                                       |       |       |
| 2.5 Gearing diagram of Speed frame (Ouestion not to be asked in theory Exam)                                                   |       |       |
| 26 Bobbin drive cone drive transmission lifter motion                                                                          |       |       |
| 2.5 Booon drive, cone drive danshission, inter motion<br>2.7 Study of building mechanism of Speed frame, shifting of cone belt |       |       |
| reversal of bobbin rail shortening of lift                                                                                     |       |       |
| 2.8 Monitoring device, sliver ston motion, roving ston motion                                                                  |       |       |
| 2.6 Promotion guevice- silver stop motion, toving stop motion                                                                  |       |       |
| 2.7 Ocal change position of the Speed frames areas drafting and collecting range.                                              |       |       |
| 2.10 Galculation of Hank Draft Twist & Production                                                                              |       |       |

| 2.12 Causes of defects and remedies.                                                      |    |     |
|-------------------------------------------------------------------------------------------|----|-----|
| Topic.3. Study of Ring frame process                                                      |    |     |
| Specific objectives: The student will able to                                             |    |     |
| Understand the concept of drafting & twisting of fibers                                   |    |     |
| Understand effect of setting & process parameters on material.                            |    |     |
| Understand the importance of balloon control rings.                                       |    |     |
| Understand the defect in ring frame.                                                      |    |     |
| Content:                                                                                  |    |     |
| 3.1 Introduction                                                                          |    |     |
| 3.2 Function and mode of operation.                                                       |    |     |
| 3.3 Design feature of machine- Frame, creel, drafting arrangement,                        |    |     |
| 3.4 Spindle drive, yarn guiding device, balloon control ring, separators, types of rings. | 20 | 32  |
| 3.5 Traveller-task and function. Types, wire profile of Traveller. Traveller              |    |     |
| clearer. Traveller numbering system                                                       |    |     |
| 3.7 Variable drive                                                                        |    |     |
| 3.8 Structure of Ring bobbin, Winding process, Builder motion of ring                     |    |     |
| bobbin, building the base.                                                                |    |     |
| 39 Monitoring system, ring data system                                                    |    |     |
| 3.10 Modern development in Ring frame                                                     |    |     |
| 3.11 Calculation of draft, twist and production of Ring frame,                            |    |     |
| 3.12 Average count and 20 <sup>s</sup> conversion.                                        |    |     |
| Total                                                                                     | 64 | 100 |

#### Practical: Skills to be developed: Intellectual Skills:

- 1. Calculate the speeds of various machine parts in comber preparation, comber, Speed frame and ring frame.
- 2. Calculate the production of comber preparation, comber. Speed frame and ring frame.
- 3. Select various settings of comber, Speed frame and ring frame.
- 4. Identify various change places at comber preparatory, comber speed frame and ring frame.

#### Motor Skill:

- 1. Draw gearing diagram of, Comber preparatory and Comber machines speed frame and ring frame.
- 2. Draw the sketches of, Comber preparatory and Comber Machines speed frame and ring frame.
- 3. Measure the speed of Comber preparatory and Comber machine speed frame and ring frame components using tachometer.
- 4. Follow standard setting procedure for various Comber preparatory and Comber machine speed frame and ring frame components.

## List of Practical

1. Study of gearing diagram and passage of the sliver lap machine, calculations of speed of various parts, draft and production.

- 2. Study of gearing diagram and passage of the Ribbon lap machine, calculations of speed of various parts, draft and production.
- 3. Study of gearing diagram and passage of the Comber machine, calculations of speed of various parts, draft and production.
- 4. Study of comber setting, (Step gauge, distance gauge, top comb setting, feed roll setting )
- 5. Study of gearing diagram and passage of the Speed frame machine, calculations of speed of various parts, draft and production.
- 6. Study of gearing diagram and passage of the Ring frame machine, calculations of speed of various parts, draft and production
- 7. Study of Drafting system, building mechanism and change places of ring frame.
- 8. Study of building mechanism, differential motions and drafting systems of a speed frame machine.
- 9. Ring rail leveling, thread guide setting & spindle gauging of a ring frame.

| 03  |           | 02  | 03                           | 100 | 50# |  | 25@ | 175   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

The textile manufacturing is done in various stages. In first year, we have experienced that this subject of fabric manufacture dealt with yarn preparation in winding and ordinary weaving on simple loom. In this second year, this subject deals with subsequent steps of yarn preparation and automatic weaving. These are essential stages in the fabric production. This subject intends to impart knowledge and skills in the area of important weaving process, i.e. warping, sizing operation and fabric production on automatic looms.

#### **Objectives:**

The student will be able to

- 1. Understand Sizing and automatic looms.
- 2. Identify the Sizing ingredients as per the yarn, fabric and sizing machine.
- 3. Calculate the Sizing & Auto loom production.
- 4. Understand the working of Automatic loom and it's preparation.

|   | 5.4 Calculation regarding count of heald sett and reed count.     |    |     |
|   | 5.5 Selection, care and storage of healds & reeds.                |    |     |
|   | Total                                                             | 48 | 100 |

## Practical: Skills to be developed

## Intellectual skill

- 1. Select sizing ingredients.
- 2. Identify the requirements of auto loom.

## Motor Skills

- 1. Operate auto loom.
- 2. Prepare size paste.

## **List of Practical**

- 1. Study of sizing machines (at least two visits to sizing units) and sketching the passage of warp on sizing machine and various mechanisms.
- 2. Dismantling, refitting, setting and timing of following mechanisms on Automatic shuttle looms.
  - 1. Shedding,
  - 2. Under-picking,
  - 3. Dagger-shaft, Swell mechanism
  - 4. Battery, Loose end cutter mechanism
  - 5. Weft fork and anti-crack,
  - 6. Let-off motion,
  - 7. Shuttle changing mechanism,
  - 8. Feeler mechanism,,,
  - 9. Warp stop motion,
  - 10. Operating the automatic loom to produce good cloth.

- Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Knitting technology is the important area of textile industry. Knitted fabrics due to its stretchable and favourable properties are in good demand and it is expected to rise day by day. Knitted fabrics find uses for under garments, sports Uniforms, summer and winter dresses, etc. to a large extent. This sector is now diversifying into synthetics, domestic fabric, carpets, technical and geo textiles. Similarly, since last few years young generation has been attracted to readymade garments due to quality, cost and readiness of availability. As such, large opportunities for the textile technologist particularly diploma pass-outs exist in this field. Already many diploma pass outs are finding employment in this area. Therefore, the main object is to equip the students with all the relevant technical knowledge for manufacturing of knitted fabrics, articles, garments and the maintenance aspects of the machines used. This subject will help the students to start their small scale industrial units which will help them for self employment.

#### **General Objectives:**

The student will be able to,

Student will be able to

- a. Understand Warp & Weft knitting machine.
- b. Identify different Knitted structures.
- c. Calculate Knitting machines production and efficiency.

#### **Learning Structure:**

# Theory:

| Topic and Contents                                                                   | Hours | Marks |
|--------------------------------------------------------------------------------------|-------|-------|
| Topic 1. Overview of Knitting Process                                                |       |       |
| Specific objective: The student will able to                                         |       |       |
| • To define knitting process                                                         |       |       |
| • To interpret the difference between Woven & Knitted fabric.                        |       |       |
| Content:                                                                             |       |       |
| 1.1) Introduction to knitting process.                                               | 02    | 06    |
| 1.2) Introduction of Warp & Weft Knitting.                                           |       |       |
| 1.3) Reasons for growth of knitting                                                  |       |       |
| 1.4) Indian Knitting industry                                                        |       |       |
| 1.5) Comparison of Woven and Knitted fabrics                                         |       |       |
| 1.6) Classification of Weft knitting machines.                                       |       |       |
| Topic 2. Weft Knitting                                                               |       |       |
| Specific objective: The student will able to                                         |       |       |
| • Define basic terminology of Knitting.                                              |       |       |
| • Identify different parts of Knitting and their function                            |       |       |
| Describe intermeshing process for Knitting                                           |       |       |
| Content.                                                                             |       |       |
| 2.1 Definition of Basic terms in weft knitting: closed loop face loop                |       |       |
| needle loop, sinker loop, course wale                                                |       |       |
| 2.2 Function elements in Knitting                                                    |       |       |
| - Types of needle & its comparison                                                   | 06    | 10    |
| - Knitting action of different needles                                               |       |       |
| - Sinker & its function                                                              |       |       |
| - Cylinder : Gauge nitch                                                             |       |       |
| - Cams                                                                               |       |       |
| - Feeder/stripper                                                                    |       |       |
| - Fabric spreader                                                                    |       |       |
| 2.3 Needles with different butt positions: Use in design                             |       |       |
| 2.4 Positive feeder- its functions, types.                                           |       |       |
| <b>Topic.3.</b> Weft knitting Machines                                               |       |       |
| Specific objectives: The student will be able to                                     |       |       |
| • Operate knitting machine.                                                          |       |       |
| <ul> <li>Interpret different knitted fabric structure for appropriate use</li> </ul> |       |       |
| <ul> <li>Select the procedure of knitted fabric production</li> </ul>                |       |       |
| Content.                                                                             |       |       |
| 3.1 Passage of varn through Single jersey machine                                    |       |       |
| 3.2 Single jersey machine -Structure loop diagram knitting                           | 08    | 16    |
| elements knitting action                                                             |       | -     |
| 3.3 Rih knitting machine-Structure, loop diagram, Needle arrangement                 |       |       |
| knitting action, machine construction.                                               |       |       |
| 3.4 Interlock machine-loop diagram structure needle Arrangement                      |       |       |
| trick arrangement knitting action                                                    |       |       |
| 3.5 Purl Machine-loop diagram, structure, knitting action                            |       |       |
| 3.6 Characteristics of Single jersev, rib, interlock, purl fabrics                   |       |       |
| <b>Topic 4.</b> Weft knitted fabrics                                                 |       |       |
| <b>Specific objective:-</b> The student will able to                                 |       |       |
| • Represent the knitted fabric on paper                                              | 06    | 12    |
| Draw different knitted fabric structure                                              |       |       |
|                                                                                      | 1     |       |

| Differentiate the knitted fabrics                                         |    |    |
|---------------------------------------------------------------------------|----|----|
| Content:                                                                  |    |    |
| 4.1) Principle stitches in weft knitting-knit, tuck, miss.                |    |    |
| 4.2) Notations in weft knitting                                           |    |    |
| 4.3) Ornamentation of plain knit fabrics                                  |    |    |
| - La-coste, According, Thick Fleece, Jersey blister                       |    |    |
| 4.4) Ornamentation of Rib Structure                                       |    |    |
| - Half cardigan, Full cardigan                                            |    |    |
| 4.5) Ornamentation of Interlock                                           |    |    |
| - Eight lock structure                                                    |    |    |
| 4.6) Double knit structures-Milan Rib, Double pique, pique poplin,        |    |    |
| punto di roma, ottoman rib, texi pique                                    |    |    |
| Topic 5. Knitting Calculations                                            |    |    |
| Specific objective: The student will able to                              |    |    |
| <ul> <li>Calculate knitting production in Kg/Day or Meters/day</li> </ul> |    |    |
| • Estimate yarn requirement for a particular production                   |    |    |
| • Calculate no. of machine required for designed output                   |    |    |
| Content :                                                                 | 06 | 12 |
| 5.1) Production Calculation                                               |    |    |
| 5.2) Grams per square meter calculation                                   |    |    |
| 5.3) Tightness factor                                                     |    |    |
| 5.4) Stitch length calculation                                            |    |    |
| 5.5) Weight per linear meter calculation                                  |    |    |
| Topic 6 : Warp knitting                                                   |    |    |
| Specific objective : The student will able to                             |    |    |
| • Describe the process of warp knitting                                   |    |    |
| Compare different knitting technologies.                                  |    |    |
| Content:-                                                                 |    |    |
| 6.1) Introduction of warp knitting                                        | 03 | 08 |
| 6.2) Loop structure                                                       |    |    |
| 6.3) Comparison of warp and weft knitting                                 |    |    |
| 6.4) Basic Warp knitting terms- overlap, underlap, open & closed lap      |    |    |
| 6.5) Application of warp knit fabrics                                     |    |    |
| 6.6) Classification of warp knitting                                      |    |    |

| TOTAL                                                         | 48 | 100 |
|---------------------------------------------------------------|----|-----|
| 9.3) Quality tests for weft knitted fabrics.                  |    |     |
| 9.2) Defects and their remedies in knitted fabrics.           |    |     |
| 9.1) Basic properties of yarns used for knitting              |    |     |
| Content:-                                                     | 03 | 08  |
| • Define the knitted fabric defects.                          | 02 | 00  |
| • Understand quality parameters of knitted fabric.            |    |     |
| <b>Specific objective:-</b> The student will able to          |    |     |
| <b>Topic 9</b> :Ouality aspects of knitting                   |    |     |
| 8.4) Yarn path in flat knitting machine Knitting cycle.       |    |     |
| 8 3) Knitting elements                                        |    |     |
| 8 2) Types and classification                                 |    |     |
| 8 1) Introduction of flat knitting                            | 05 | 00  |
| Content:-                                                     | 03 | 08  |
| <ul> <li>To understand mechanism of flat knitting.</li> </ul> |    |     |
| • To differentiates flat knitting and circular knitting       |    |     |
| Specific objective: The student will able to                  |    |     |
| Topic 9 Elet Dod Initing                                      |    |     |
| 7.1.4) Dringing stitches in ware britting                     |    |     |
| 7.1.2) Pattern wheel, pattern drum and chain links            |    |     |
| 7.1.1) Introduction of patterning.                            |    |     |
| Sub topic 7.1 :Patterning in warp knitting 8 Marks            |    |     |
| 7.6) Notation for warp knit structures                        |    |     |
| 7.5) Knitting action of Rachel machine                        |    |     |
| 7.4) Elements of Rachel knitting machine                      |    |     |
| 7.3) Knitting cycles of Tricot m/c                            |    |     |
| 7.2) Elements of Tricot knitting machine                      | 11 | 20  |
| 7.1) Comparison of tricot And Rachel machine                  |    |     |
| Content:-                                                     |    |     |
| • Prepare the chain links.                                    |    |     |
| • Understand mechanism of patterning.                         |    |     |
| • Represent the warp knitted fabric on paper.                 |    |     |
| • Identify different parts of warp knitting machine.          |    |     |
| Specific objective: The student will able to                  |    |     |
| Topic 7 : Warp Knitting machine12 Marks                       |    |     |
| Topic 7 Warm Knitting maching                                 |    |     |

# Practical:

Skills to be developed:

# Intellectual Skills:

- 1) The functions of knitting mechanisms.
- 2) Different knitted fabric structures.
- 3) The designs of needles and cams.

## **Motor Skills:**

- 1) Identify different knitted fabric structures.
- 2) Draw diagrams of needles and cams.

### **List of Practical's:**

- 1. Study of Single jersey machine (Drawing, Understand the function of element).
- 2. Study of Double jersey machine (Drawing, Understand the function of elements).
- 3. Study of Flat knitting machine (Sketch yarn passage, Identify parts).
- 4. Study of various elements used on Circular knitting machine (Drawing, Identification of parts).
- 5. Study of principle stitches used on circular knitting machine (draw the loop diagram, assembling different cams).
- 6. Study of knitted fabric design, notation representation of fabric on paper(plotting design on paper, unroving the yarn, counting the C.P.I & W.P.I)
- 7. Analysis of Single jersey fabric (Identification, Unroving, counting of fabric cpi & wpi)
- 8. Analysis of R ib Fabric (Identification, Unroving, counting of fabric cpi & wpi)
- 9. Analysis of Interlock fabric (Identification, Unroving, counting of fabric cpi & wpi)
- 10. Study of Warp knitting machine (Drawing, Identification of various parts).
- 11. Study of gearing arrangement of circular knitting machine
- 12. Visit to modern Knitting unit (plot the process flow)

## List of Assignments:

1. Draw diagrammatic notation & symbolic notation for different knitted structure.

## **Learning Resources:**

1. Books:

| Sr.<br>No. | Author                | Title                                                     | Publisher                                      |

## 2. CDs, PPTs, Models, Charts etc. :

## 3. IS, BIS and International Codes:

- 1. Reference: ASTM D 3882-85 for fabric skewness.
- 2. Reference: AATCC 178-1994 for barre.

## 4. Websites:

- 1. http://www.shimaseiki.com/
- 2. http://www.kern-liebers.com/

- 3. http://www.groz-beckert.com/
- 4. http://www.knittingindustry.com

# List of Instruments, Equipment and Machines:

- 1. Single jersey machine.
- 2. Double jersey machine.
- 3. Flat knitting machine.
- 4. Warp knitting machine.
- 5. Electronic weighing scale.
- 6. Pick glass.
Course Name : Diploma in Textile Manufactures Course Code : TX Semester : Fourth Subject Title : Textile Testing-III Subject Code : 17465

### **Teaching and Examination Scheme:**

| Teaching Scheme |    |    | Examination Scheme |     |    |    |     |       |
|-----------------|----|----|--------------------|-----|----|----|-----|-------|
| TH              | TU | PR | PAPER<br>HRS.      | TH  | PR | OR | TW  | TOTAL |
| 03              |    | 02 | 03                 | 100 |    |    | 25@ | 125   |

### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

### **Rationale:**

There is variety of raw materials for textile manufacturing, such as cotton, silk, synthetic fibers, etc. These raw materials are being used individually or mixed in different proportions to form a yarn of desired quality. The raw materials can be tested for numerous characteristics like fiber length, fineness, strength, maturity etc. Intermediate products like sliver, roving etc. are also required to be tested for controlling the process, for optimizing the process parameters or for developing existing process. Finally, to ensure the quality product, final product that may be yarn, fabric or garment, testing is imperative. This subject intends to equip students with the concepts, principles and methods of testing of various textile fiber and yarns, and fabric which is helpful in selection of raw materials, process control, process optimization, quality assurance and research purpose.

Since textile is system of mass production and contains lots of variations, lot of experimentation is required. Results obtained from specific number of observations are to be analyzed, interpreted and used for best outcomes. Therefore, students are equipped with the methods to analyze the testing results statistically.

### **General Objectives:**

Student will be able to:

- 1. Understand principle & advanced concept of Testing of fibre/ Yarns / Fabric
- 2. Determine tensile, tearing & bursting strength of fabric.
- 3. List standard methods used for testing textile material.
- 4. Define various terms used in yarn & fabric testing.
- 5. Correlate the result of the tests to the application of material.

#### **Learning Structure:**

### **Detailed Contents:**

| Chapter | Contents                                                                                                                                                                                                                                                                                                                                                                                             | Hours | Marks |

### Skills to be developed

### 1) Intellectual skills:

- 1. Proper selection of measuring instruments depending upon the data and precision required.
- 2. Analyze properties of matter & their use for the selection of material.
- 3. To interpret the results from observations and calculations.
- 4. To use these results for corrective actions in mechanical and wet processing.

### 2) Motor skills:-

- 1. Proper handling of instruments.
- 2. Measuring physical dimensions of fibre and yarn, fabric accurately.
- 3. To observe the phenomenon and to list the observations in proper tabular form.
- 4. To adopt proper procedure while performing the experiment.

### List of Practical: Determination of:

- 1. Determination of Cover factor.
- 2. Determination of Crimp % in warp & weft of the fabric.
- 3. Determination of Stiffness of fabric.
- 4. Determination of Drape of fabric.
- 5. Determination of Crease Recovery angle of fabric.
- 6. Determination of Tearing Strength of fabric.
- 7. Determination of Tensile strength of fabric.
- 8. Determination of dimensional stability of fabric
- 9. Determination of fibre parameters by HVI/AFIS

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

### **Rationale:**

The textile yarns and fabrics are being used in all occasions of life, which have varieties of patterns, colours and designs all over the world. The people use fabrics treated with either with natural and/or man made synthetic colours and chemicals to produce the desired effect in numerous hue and tone of different colours. The physical and chemical properties of these chemicals and colours are of prime interest to the people in textile industry. While working in various capacities in textile industry, it is very essential to acquire the necessary knowledge and skills in using these chemicals. In textile Chemistry-I Fiber manufacturing, sizing and pretreatments have been covered. In textile Chemistry II discussion will be about

- 1. Dyeing of yarns and fabrics.
- 2. Printing of fabrics.
- 3. Finishing of fabrics like mercerizing, sanforising, etc.

### **Objectives:**

The students will be able to

- 1. Study of various dyes and dyeing methods
- 2. Understand the dyeing machineries for cotton and polyesters
- 3. Select suitable ingredients for formulation of print paste used in printing cotton and other textiles
- 4. Classify the finishing processes

### **Learning Structure:**

### **Detailed Content:**

### Practical: Skills to be developed

### Intellectual skills

- a. To Dye of yarn and fabric
- b. Match with the standard shed card

### **Motor Skills**

- a. Weigh accurately the dyes
- b. Handle the glass apparatus carefully

### **List of Practical:**

- 1. Dyeing of cellulosic fabric with different classes of dyes-5experiments.
- 2. Dyeing of synthetic fabric with different classes of dyes- 2experiments.
- 3. Testing of colour fastness (washing, light, and abrasion) for dyed fabrics and garments. 1experiments
- 4. Preparation of screen for printing One experiment.
- 5. Preparation of printing paste of different dyes. 3 experiments.
- 6. Fixation of prints with steaming and curing methods.
- 7. Visit to process house.

### **Rationale:**

Most of the diploma holders join industries for jobs. Due to globalization and competition in the industrial and service sectors the selection for the job is based on campus interviews or competitive tests.

While selecting candidates a normal practice adopted is to see general confidence, ability to communicate and their attitude, in addition to basic technological concepts.

The purpose of introducing professional practices is to provide opportunity to students to undergo activities which will enable them to develop confidence. Industrial visits, expert lectures, seminars on technical topics and group discussion are planned in a semester so that there will be increased participation of students in learning process.

### **Objectives:**

Student will be able to:

- 1. Acquire information from different sources.
- 2. Prepare notes for given topic.
- 3. Present given topic in a seminar.
- 4. Interact with peers to share thoughts.
- 5. Prepare a report on industrial visit, expert lecture.

|               | Information Search:                                                             |     |  |  |  |  |  |
|               | Information search can be done through manufacturer's catalogue, websites,      |     |  |  |  |  |  |
|               | magazines, books etc. and submit a report any one topic.                        |     |  |  |  |  |  |
|               | Following topics are suggested :                                                |     |  |  |  |  |  |
|               | 1) Lubricants & additives                                                       |     |  |  |  |  |  |
|               | 2) Humidification and air conditioning in textile mills                         |     |  |  |  |  |  |
|               | 3) Illumination in textile mill                                                 |     |  |  |  |  |  |
| 3             | 4) Technical features of Spinning preparatory and spinning machineries          | 12  |  |  |  |  |  |
|               | 5) Technical features of weaving preparatory and weaving machineries            |     |  |  |  |  |  |
|               | 6) Technical features of garment manufacturing machineries                      |     |  |  |  |  |  |
|               | 7) Specialty textiles                                                           |     |  |  |  |  |  |
|               | 8) Intelligent textiles                                                         |     |  |  |  |  |  |
|               | 9) Different drives/Transmission systems in textile machines.                   |     |  |  |  |  |  |
|               | 10) Types of bearings – applications and suppliers.                             |     |  |  |  |  |  |
|               | 11) Solar equipment and lighting systems in textiles                            |     |  |  |  |  |  |
|               | Seminar:                                                                        |     |  |  |  |  |  |
|               | Seminar topic shall be related to the subjects of fourth semester. Each student | 4.5 |  |  |  |  |  |
| 4             | shall submit a report of at least 10 pages and deliver a seminar (Presentation  |     |  |  |  |  |  |
|               | time - 10 minutes)                                                              |     |  |  |  |  |  |
|               | Total                                                                           | 48  |  |  |  |  |  |

Course Name : Diploma in Textile Manufactures Course Code : TX Semester : Fourth Subject Title : Professional Practices-II Subject Code : 17055

**Teaching and Examination Scheme:** 

| <b>Teaching Scheme</b> |    |    | Examination Scheme |    |    |    |    |       |
|------------------------|----|----|--------------------|----|----|----|----|-------|
| TH                     | TU | PR | PAPER<br>HRS.      | TH | PR | OR | TW | TOTAL |
|                        |    | ** |                    |    |    |    |    |       |

**\*\* Industrial training for six weeks to be completed during summer break after Fourth semester.** Assessment to be done in Fifth Semester

### **Objectives:**

- Experience the industrial environment for textile industrial processes, equipment & practices.
- Collect data about Plant lay out, equipment and machines-specifications and working available in different sections and collect data.
- Experience operation of machines and process parameters of spinning and weaving departments for the target production and collect data.
- Appreciate factory utilities power water illumination men and material movement, pollution control, industrial safety etc.
- Carryout the material testing at different stages of yarn and fabric production for quality.
- Experience maintenance schedules of all the equipment and collect information on the effects of negligence of maintenance.
- Diagnose problems and find solutions to problems related with operation, and maintenance of equipment.
- Study the organization structure, job description, job specifications, promotional schemes, motivational strategies,etc.
- Collect data on production incentives, methods study and time & motion studies.
- Critical study of all activities with a view to find the areas for improvement.
- Devise solution to problem areas.
- Collect information / data for project work and seminars.

However, the detailed list of areas of study, working and data collection has been prepared and is enclosed in **3.5** – **Specific area of study and working.** The student should regularly refer to this list and accordingly choose the areas and acquire the knowledge information and skills.

- The students have to undergo industrial training in spinning and or weaving departments for 6 weeks in between fourth and fifth semesters.
- The student has to maintain a daily diary, in which they will record the daily achievements, which should be countersigned by the industry officer.
- The student should carry out the critical study of different activities and try to locate the problem or problems in any of the areas of product quality, productivity, efficiency, cost control and cost reduction, etc. Then, he should try to devise solutions to such problem.
- After completion of training each student has to bring the certificate for the entire duration for satisfactory completion of training.
- The student will be required to submit a report in handwritten, which will be properly bound.
- The students will be examined through viva-voce by the internal and external examiners. (The external examiner should be from industry).

### **3.3 Maintenance of Daily Diary**

The students are required to maintain a daily diary, regularly in systematic manner. After the completion of day's work the important information is recorded clearly as per the instructions of section in charge and get it signed daily by him. Write in brief about observations made, daily work problems / project/s undertaken, discussion held, instructions given by section in charge, literature consulted, data etc.

### 3.4 Evaluation of daily diary

Term work assessment is based on daily diary maintenance, attendance, remarks of industry. Term-work Marks will be given on the basis of evidence of diary maintenance, adequacy and quality of record.

### 3.5 Specific areas of study and working: -

Students are required to collect the relevant information on the specific area given below. This information should be recorded in daily diary and further used in preparing the Final Report.

### (a) General Information

Name of the Mill, Address and year of establish. No. of spindles-warp, weft, Doubling and Total. No. of loom-Non automatic, Automatic, Shuttle less, Total Yarn counts spun, ..... Warp. Weft. Average count of the Spg. Dept..... Shift wise No. of workers-Spinning, weaving processing, Engineering, General, Time office, Technical staff. No. Of workers per 1000 spindles. No. Of workers per 100 looms. No. Of preparations in spinning. Mill Building-type Roof plan. No. Of sorts running. Quantity of cotton consumed per month in kg. Quantity of yarn produced in kg. Per month Quantity of fabrics produced in sq. meters. Quantity of fabrics exported in sq. meters. Types of finishes given Note on Quality Control, Research and Development. Plan of various department, Showing general layout of the departments. Welfare schemes for Workers And staff.

17055 TX4

Safety measures provided.

### (b) Spinning

### i) Mixing & Blow-Room

- 1. Layout plan, lighting scheme and fire prevention method.
- 2. Handling and transportation of bales.
- 3. Temperature and Humidity.
- 4. Mixings (if possible) Type and Cotton used, Assessment of staple lengths, trash content.
- 5. Wastes (in details) with resale realization rate & disposal.
- 6. Speeds and settings of various beaters.
  - i) Vertical ii) Horizontal iii) Modern openers, production of various machines, line diagram of the processing sequence for the mixing adopted in the mills.
- 1 Cleaning points for various mixings, Blows per inch, (Adopted for processing a particular mixing)
- 2 Productive and ancillary workers, shift wise.
- 3 Lap wt. Wrapping, wt/Yd tolerance limit, lap rejection percent.
- 4 Machinery maintenance programme-Charts.
- 5 Quality control programme charts, warping stds.
- 6 Operative hours and machine hours per 100 kg.
- 7 Other particulars, if any.
- 8 No of bales consumed and the weight of cotton used.

### ii) Carding

- 1. Layout plan, lighting scheme and fire prevention methods.
- 2. Materials handling Quality and mode.
- 3. Temperature and Humidity.
- 4. Speeds of various parts, like cylinder, licker in, doffer, flats doffer: mb, stripping rollers Grinders Rollers (fast and slow)
- 5. Hank of lap fed and hank of card sliver.
- 6. Draft constant and production constant of card.
- 7. Settings of card, size of the can.
- 8. Waste extracted (details) and Disposal of waste.
- 9. Frequency of stripping grinding flat grinding, Burnishing, re-clothing.
- 10. Shift wise productive and ancillary workers.
- 11. Production per hour Operative hours and machine hours per 100 kg.
- 12. Metallic card clothing and its information ( if any)
- 13. Semi high production and high production card (note)
- 14. Maintenance schedule.
- 15. Quality control scheme-charts-wrapping stds,
- 16. Can size and special features fitted on a card.

### iii) Draw Frame

- 1. Layout plan lighting scheme, fire prevention methods.
- 2. Temp, humidity and materials handing.
- 3. No of draw frames, No. of passages package size No. of deliveries for each mixings.
- 4. Drafting systems for a draw frame.
- 5. Sliver hank and Wt. Tolerance limits, can size.
- 6. Speed of F.R. of draw frame, Production / Delivery / hour.
- 7. Hank of sliver fed and sliver delivered.
- 8. Setting of different rollers.
- 9. Production-operative hours and machine hour per 100 kg.
- 10. Shift wise productive and ancillary labour.
- 11. Maintenance schedule.

#### MSBTE - Final Copy Dt. 30/08/2013

#### 17055 TX4

- 12. Quality control scheme and chart, wrapping stds.
- 13. Special features (if any)

### iv) Slubber, Inter, Roving Frames:

- 1. Layout plan, lighting, humidity and materials, handling.
- 2. No. of slubber, inter and roving frames and spindles each preparation.
- 3. Spindle speeds.
- 4. Twist multiple and T.P.I. used for each preparation,
- 5. Drafts, hank-fed and hank delivered,
- 6. Production in Hanks / spindle / 8 hours.
- 7. Drafting systems, can size, roving bobbin size.
- 8. No. of teeth on change wheels. (Like draft change wheel, twist wheel lay gear wheel etc.)
- 9. Top arm weighting arrangement systems.
- 10. Machinery maintenance schedule, roller, covering, scouring spindle roller setting and gauges used for different cottons, oiling schedule.
- 11. Shift wise number of productive and ancillary workers.
- 12. Production per 8 hours, operative hours of machine hours per 100 kg. of production.
- 13. Breakage rate, waste details, doffing time and No. of persons for doffing.
- 14. Quality control programme, control chart used wrapping stds.
- 15. Duties of various persons.
- 16. Threading methods used for Back and Front few bobbin.

### v) Combers

- 1. Layout of combing dept.
- 2. No. of sliver lap Ribbon lap comber type and make.
- 3. Machine particulars and processing particulars, hank of sliver draft No. of doublings.
- 4. Production of sliver lap. Ribbon lap (lap size and lap weight and comber
- 5. Comber settings for different preparations.
- 6. Speed of sliver lap. Ribbon lap and combers (nips)
- 7. Waste percent foe different preparation.
- 8. Waste percent for different preparations.
- 9. Quantity of waste obtained and waste realization price and disposal of waste.
- 10. R.H. Temp. Lighting arrangement, material transport.
- 11. Note on high production comber (if any)
- 12. Quality Control programme- wrapping Standards.
- 13. Shift wise number of productive and ancillary workers.
- 14. Special feature, if any.

### vi) Ring Frame Department

- 1. Layout of plan, lighting arrangement, humidification
- 2. No. of warp and weft ring frame with spindles / frame.
- 3. Spindle speeds, front roller speed, twist constant, draft constant, drafting arrangement
- 4. TPI Draft (back and front Zone) Twist factors used traveled.
- 5. Hank of sliver fed and counts spun.
- 6. Net weight / bobbin, per doff per operative, per hour
- 7. Production per frame per 8 hours operative hours and hours.
- 8. Yarn breakage rate, detail study of yarn breaks, Calculation of breaks / 100 spindle hours
- 9. Shift wise No. of productive and ancillary workers.
- 10. R.H. and temp
- 11. Quality control programme.
- 12. Machinery maintenance programme oiling, schedule, spindle gauge schedule spindle oil used.
- 13. Wrapping standards, yarn count, yarn strength, CSP and U% or C.V.% values for all counts.

#### **Summary Of Spinning Section**

Production in Hanks per frame and gms./spindle.

MSBTE - Final Copy Dt. 30/08/2013

## 

| Sequence | Hank Count | Ends<br>Doubled | Draft<br>T | Speed<br>PI | spindles per 8<br>hrs<br>hank/labs kg. |  |
|----------|------------|-----------------|------------|-------------|----------------------------------------|--|
|          |            |                 |            |             |                                        |  |

Similar information should be tabulated for other mixing and counts.

Maintenance schedule – as followed in the Mill. (Department – wise date)

### (c) WEAVING

### i) Warp & weft winding

- 1. Layout plan, Lighting scheme, humidification and fire prevention installations.
- 2. Temp. and humidity maintained, materials handling.
- 3. Types of warp winding machines, their speed in meters per counts, worked, slub catcher settings, tensions, used, Eff. and H.P. required.
- 4. Spindles per operative (count-wise)
- 5. Production per operative (count-wise)
- 6. Breakage rate per 100 bobbins.
- 7. Yarn content of cones or cheeses in kg.
- 8. Tailing percentage (for B.C spooler)
- 9. Types of knots.
- 10. Quantity of waste obtained and waste realisation price and disposal of waste.
- 11. Operations to be performed by operatives.
- 12. Preparation for cheese dyeing (Note)
- 13. Preparation for weft re-winding.
- 14. Study of ribbon breaking, unwinding accelerator.
- 15. Maintenance schedule.
- 16. Quality control programme (if any)
- 17. Shift wise productive and ancillary labour.

#### ii) Warping

- 1. Layout lighting, humidification and fire prevention scheme.
- 2. Types of warping machines.
- 3. Types of creels their capacities and special features.
- 4. Speed and break application.
- 5. Beam dimensions and yarn content in metres or in kg.
- 6. Production per shift of 8 hrs. (Count wise)
- 7. Breakage rate per 400 ends per 1000 metres (Count wise).
- 8. Shift wise productive and ancillary labour.

#### iii) Sizing

- 1. Types of machines (2 Cylinder, Hot-air, multi cylinder)
- 2. Average sizing speed,
- 3. Drying capacity in kg / Hr.
- 4. Expected and actual production in kg.
- 5. Efficiency.
- 6. Special features and controls fitted on the sizing M/c.
- 7. Shift wise productive and ancillary layout.
- 8. Size recipes for different size-mix
- 9. Method of preparation of a size-mix
- 10. Cost of Size-mix material per kg.

#### iv) Drawing- In

- 1. Average No. of ends drawn/shift/operative for plain sorts, for drill sorts, for dobby sorts.
- 2. Particulars about drawing in and knotting machine. There production rate.
- 3. Labour complement shift wise (i) Productive (ii) Ancillary

#### v) Weaving Shed

- 1. Types of looms-width of the looms-Reed space available.
- 2. Jobber-wise allocation of looms.
- 3. Shift wise labour complement (i) Productive (ii) Ancillary
- 4. Duties of ancillary workers
- 5. Sort particulars.
- 6. Sort No
- 7. Name of the fabric
- 8. Finish given
- 9. Finished state Dimensions (i) width (ii) Length
- 10. Grey state Dimensions (i) width (ii) Length
- 11. Reed space in cms. Or inches.
- 12. Tape length in metres or yards.
- 13. Pick per cm. Or inch.
- 14. Reed count
- 15. Total selvedge ends.
- 16. Total ends.
- 17. Size % on warp weight
- 18. Count of warp yarn
- 19. Count of weft yarn
- 20. Count of selvedge yarn
- 21. Loom width in inches
- 22. Loom speed in R.P.M
- 23. Expected efficiency
- 24. Production in metres or yards / shift
- 25. Warp yarn required with waste allowance / per shift
- 26. Weft yarn required with waste allowance / per shift

#### MSBTE - Final Copy Dt. 30/08/2013

#### 17055 TX4

- 27. Selvedge yarn required with waste allowance / per shift
- 28. Mixed counts working on looms.

#### vi) Automatic Weaving (if available)

- 1) Sorts worked and their particulars in the above manner
- 2) Organisation of auto-looms section.
  - a) No of looms to a weaver with reference to width and type of auto loom.
  - b) No of looms to jobber
  - c) No of looms to Batter filler
  - d) No of looms to smash hand
  - e) No of looms to Oiler, helper, cleaner
  - f) Breakage rate study on some sorts
  - g) Wages paid to different categories of workers.
  - h) Layout of looms and humidification and lighting and ventilation system.
  - i) Quality control programme.
  - j) Different type of wastes.
  - k) Jobber and their work load duties.
- 3) Breakage rate study on all types of sorts possible.
- 4) Note on shuttle less loom (if existing)

#### **Summary of Labour Organisation**

| Deptt | I Shift    | II Shift | III Shift |       |
|-------|------------|----------|-----------|-------|
|       | Productive | P.A.     | P.A.      | Total |
|       | Ancillary  |          |           |       |

#### vii) Grey Room

- 1. Inspection of Goods
- 2. Classification of Faults
- 3. Grey room Record
- 4. Stitching of Goods for preparing lots
- 5. Give particulars of goods in Grey Room
- 6. How are the stains removed?
- 7. What are the other corrective processes carried out in Grey room
- 8. No of workers in Grey room and there functions
- 9. How are the grey goods assessed for faults?
- 10. How is the ink prepared?
- 11. Lay out of grey room
- 12. No of Stitching machine
- 13. Manufacturers of Stitching machine
- 14. Particulars of Thread Used in stitching machine with reference to fibre composition count etc.
- 15. Design of Observation tables
- 16. No of Supervisors per Shift.

#### (d) Testing and Quality Control

- 1. Layout plan, lighting scheme, fire prevention methods.
- 2. Temperature, humidity, air-conditioning & its effects on fibre properties.
- 3. Sampling techniques used for testing fibres, yarn & fabric.
- 4. Fibre length, fineness, maturity & strength determination, equipment & methods.
- 5. Selection of mechanical process in Spinning depending upon fibre parameters.
- 6. Evenness testing of lap, sliver & roving and suggestions for corrective measures.
- 7. Yarn Count, Twist, Strength determination, equipment & methods.

#### MSBTE - Final Copy Dt. 30/08/2013

#### 17055 TX4

- 8. Evenness & hairiness testing of yarn & suggestions for corrective measures.
- 9. Fabric testing & inspection.
- 10. Other testing such as trash content in cotton, nep count, waste percentage, cleaning efficiency etc.
- 11. Synchronisation of Quality Control with Maintenance activities.

#### (e) Costing

The following information can be gathered, **if possible**. If the management is reluctant to supply the information, do not insist upon.

- 1. Raw cotton cost for different types of wastes.
- 2. Waste realisation prices for different types of wastes.
- 3. Wages and fringe benefits given to the worker of various department.
- 4. Method of depreciation used for cost purpose.
- 5. Administrative charge percentage.
- 6. Selling expenses charges per kg or per Yd.
- 7. Spindle, Shift OH charges for different counts.
- 8. Selling price of yarn cost per kg. (if the yarn is sold to out side parties)
- 9. Waste multipliers for different mixings.
- 10. Loom shift OH charges for different mixings.
- 11. Method of costing.
- 12. Fabric cost sheet for some sorts.
- 13. Wages for the time rate workers in each department.
- 14. Wages for the piece rate workers in each department.

#### **CRITICAL STUDY**

Can you suggest ways to improve the operational deficiency and organisational technique, considering first each department you have studied separately and then collectively? Your suggestions may be based on (a) Material handling procedures, (b) Quality control programme (c) Maintenance schedules. (d) Production improvement techniques, (e) Quality improvement

Technique.

Student Contact Hours Per Week: 32 Hrs.

### THEORY AND PRACTICAL PERIODS OF 60 MINUTES EACH.

Total Marks: 900

@ - Internal Assessment, # - External Assessment, No Theory Examination, \$ - Common to all branches, #\* - Online Examination,

 $\beta$  - Common to ME, PG, PT, MH, MI

Abbreviations: TH-Theory, TU- Tutorial, PR-Practical, OR-Oral, TW- Term Work, SW- Sessional Work

\*\* Industrial Training (Optional) - Student can undergo Industrial Training of four weeks after fourth semester examination during summer vacation.

Assessment will be done in Fifth semester under Professional Practices-III. They will be exempted from activities of Professional Practices-III of 5<sup>th</sup> Semester.

- Conduct two class tests each of 25 marks for each theory subject. Sum of the total test marks of all subjects is to be converted out of 50 marks as sessional work (SW).
- > Progressive evaluation is to be done by subject teacher as per the prevailing curriculum implementation and assessment norms.
- Code number for TH, PR, OR, TW are to be given as suffix 1, 4, 8, 9 respectively to the subject code.

#### Course Name : All Branches of Diploma in Engineering & Technology

## Course Code : AE/CE/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG/AU

Semester : Fourth

Subject Title : Environmental Studies

Subject Code : 17401

**Teaching and Examination Scheme:**

### **#\* Online Theory Examination**

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

### **Learning Structure:**

## Theory:

| Topic and Contents                                                                                                                      | Hours | Marks |
|-----------------------------------------------------------------------------------------------------------------------------------------|-------|-------|
| Topic 1: Nature of Environmental Studies                                                                                                |       |       |
| Specific Objectives:                                                                                                                    |       |       |
| Define the terms related to Environmental Studies                                                                                       |       |       |
| State importance of awareness about environment in general public                                                                       | 01    | 04    |
| Contents:                                                                                                                               | 01    | 04    |
| • Definition, Scope and Importance of the environmental studies                                                                         |       |       |
| Importance of the studies irrespective of course                                                                                        |       |       |

### Practical: Skills to be developed:

### **Intellectual Skills**:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

### Motor Skills:

- 1. Presentation Skills
- 2. Use of multi media

### List of Projects:

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds

4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work. (SW)

### **Rationale:**

Automobile manufacturing processes is a core technological subject. With advent of technology there are many advances in manufacturing processes and equipments. The knowledge of these advances is essential for a diploma student engaged in manufacturing organizations. Students should be able to write and apply CNC programs in manufacturing industry.

### **General Objectives:**

Student will be able to,

- > Know the forging process and it's use in manufacturing automobile parts.
- ▶ Know the different press tools and their operations.
- > Understand different welding processes used in industry.
- > Selection and applications of different surface cleaning and coating processes
- ➤ Know the different methods of surface finishing.
- ▶ Know about sub-systems of CNC machines and write CNC programs.

### **Learning Structure:**

### Practical:

Skills to be developed:

### Intellectual Skills:

- 1. Understand the different types of press and welding components.
- 2. Know the different types of programming codes

### **Motor Skills:**

- 1. To prepare given job on milling machine.
- 2. To use press machine to produce various auto components
- 3. To prepare job by welding process
- 4. To produce a job on CNC turning center

### List of Practicals:

- 1. One job involving different milling machine operations such as key way cutting, gear cutting by indexing in a batch of 2 students.
- 2. One press work job involving operations like blanking, piercing and drawing. (Job should be selected from market utility).
- 3. One resistance welding job to show the working principle of resistance welding. Calculate current and time required for completion of a resistance welding job.
- 4. One simple part programming job on CNC machine. One job on CNC lathe having plain turning, taper turning, step turning, threading, boring and grooving (Batch of 2 students).

OR

One job on CNC milling having following operations – face milling, slotting, contour machining (Batch of 2 students)

5. Industrial visit shall be arranged to demonstrate different Milling machines, grinding machines, CNC machines, forging operations, press operations, Surface treatment and surface finishing processes. Write a report.

# Note: Different machine tools and operations may be shown during industrial visits arranged under Professional Practices -IV

### List of Assignments:

- 1. ISO codes for turning and machining center used in CNC programming.
- 2. Prepare Process sheet for forging operations of a simple automobile component.
- 3. Prepare Process sheet for press working operation using compound or progressive die.

### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

### **Rationale:**

Heat energy is the basis for most of the power producing and power absorbing devices. In order to understand the principles and working of these devices it is essential to understand the basic laws and concepts of thermodynamic processes and gas cycles, properties of steam, generation of steam with modern boilers, steam condensers and turbines. As modern diesel engine vehicles are turbocharged. Students should also understand the working principles and constructions of air compressors gas turbines and jet engines. Due to energy crunch of petroleum products worldwide hunt for alternative energy sources is being done for the last three decades. Hence students should also have comparative brief idea about various conventional energy sources, calorific values, carbon value and evaporative power of fuels and exploration of various alternative energy sources. Student should have capability to know the necessary parameters affecting efficiency of heat absorption, rejection or conversion devices into work.

### **Objectives:**

Students will be able to:

- Correlate the theoretical knowledge with practical aspects of systems of work producing and work absorbing devices like boilers, condensers, steam turbines, air compressors, gas turbines etc.
- > Describe various sources of energy and ways to harness it.
- Understand the chemistry of fuel and Estimate calorific value, mass of air required for complete combustion of fuels.
- Identify and locate various parts of equipments, use of instruments, tools for assembly and dismantling of various devices.
- > Observe the working of devices with change in parameters

### Learning Structure:

| Theory:                                                                     |       |       |  |  |

### Practical:

Skills to be developed:

### Intellectual skills:

- 1. Describe the locations of components.
- 2. Analyse the functioning of systems and respective components.
- 3. Describe the direction flow of fluids and work
- 4. Analyse the parameters affecting safety and efficiency of devices.

### **Motor Skills:**

- 1. Proper use of tools.
- 2. Practice of safe working procedures.
- 3. Variations in parameters affecting efficiency.

### **List of Practicals:**

1) Visit to any industry where boiler is installed with reference to observations of locations, constructions and working of boiler mountings like safety valve and Bourdon's pressure gauge and boiler accessories like a) economizer b) super-heater.

(The same should also be explained on cut- section and table model in laboratory)

- 2) Visit to cogeneration plant of sugar factory or any other thermal power plant with reference to observation of components, path of steam, minimum and maximum r.p.m., governing, bleeding and maintenance schedule of steam turbine.
- 3) Study the provisions of Indian boiler act with reference to duties of boiler inspector, chief inspector, annual registration process and accident.
- 4) Dismantling and assembling of one reciprocating and one rotary compressor.
- 5) Study of system components of gas turbines used in turbocharger with reference to direction of flow of air and flue gas, shape of vanes, blades also describe maintenance schedule of gas turbine.
- 6) Study any solar water heater and calculate it's efficiency.
- 7) Determination of calorific value of solid or liquid fuel using Bomb calorimeter.
- 8) Visit a wind mill to study the various features and prepare report containing specification, materials, operating speed range, wind speed data, locking mechanism, protective coatings and efficiency.

**Course Name : Diploma in Automobile Engineering** 

Course Code : AE

Semester : Fourth

Subject Title : Automobile Engines

Subject Code : 17408

**Teaching and Examination Scheme:** 

| Teaching Scheme |    |    |              |     | Examinati | on Scheme |     |       |
|-----------------|----|----|--------------|-----|-----------|-----------|-----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH  | PR        | OR        | TW  | TOTAL |
| 03              |    | 04 | 03           | 100 | 50#       |           | 25@ | 175   |

# NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work. (SW)

# **Rationale:**

This is a core technology subject. I C engines are required to run the vehicles. The basic principles of Thermodynamics are applied in I C engine. This subject forms the basis for the Advanced Automobile Engine and vehicle maintenance. Knowledge of various engine systems will be helpful in finding and evaluating engine maintenance problems.

# **General Objectives:**

Students will be able to,

- > Understand working principles, comparison and applications of I C engine.
- ➤ Know constructional details of different types of engine.
- Draw layout and understand construction and working of various systems required in engine.
- > Perform tests on I.C. engine and estimate performance parameters.

# **Learning Structure:**

| Applications | Automobiles, Airplanes, Locomotives, Electricity Generators, Earth moving machinery and so on.                                            |  |  |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|              |                                                                                                                                           |  |  |
| Procedures   | Induction, Heat addition, Ignition, Injection, Heat rejection, Cooling, Lubrication, Exhaust, Testing, Measurement.                       |  |  |
|              |                                                                                                                                           |  |  |
| Principles   | Otto cycle, Diesel cycle, Combustion, Heat transfer, Friction,                                                                            |  |  |
|              |                                                                                                                                           |  |  |
| Concepts     | 4 stroke cycle, crank and valve operating mechanism, properties of fluids (coolants, lubricants, and fuels), performance testing methods. |  |  |
|              |                                                                                                                                           |  |  |
| Facts        | Components of I.C. engine systems                                                                                                         |  |  |

# Theory:

| Topics and Contents                                                       | Hours | Marks |
|---------------------------------------------------------------------------|-------|-------|
| 01. Fundamentals of I.C. Engine 16 marks                                  |       |       |
| Specific Objectives:                                                      |       |       |
| Understand working principle of four and two stroke cycle engines.        |       |       |
| Write nomenclature of engine.                                             |       |       |
| Compare petrol and diesel engines, four stroke and two stroke engines.    |       |       |
| Classify I.C. engines and write their specifications.                     |       |       |
|                                                                           |       |       |
| Content                                                                   |       |       |
| 1.1 Introduction 4 Marks                                                  |       |       |
| • Definition of I C engine.                                               |       |       |
| • Engine nomenclature.                                                    |       |       |
| 1.2 The working principle of Engine 6 Marks                               |       |       |
| • Four-Stroke Spark Ignition Engine                                       |       |       |
| Four-Stroke Compression Ignition Engine                                   | 08    | 16    |
| Comparison of Four Stroke SL and CL Engine                                |       |       |
| Two Stroke Engines                                                        |       |       |
| • I wo-subke Englies                                                      |       |       |
| • Scavenging.                                                             |       |       |
| • Comparison of Four-Stroke and Two-Stroke Engine.                        |       |       |
| 1.3 Classification, Specifications and applications 6 Marks               |       |       |
| • Classification of engine on the basis of: Cycle of operation, Fuel,     |       |       |
| Method of Charging, Ignition, Cooling, Cylinder arrangement,              |       |       |
| camshaft layout.                                                          |       |       |
| • Merits and Demerits of Vertical and horizontal engines.                 |       |       |
| • Engine Specifications - Two Wheelers, Light Motor Vehicle, Medium       |       |       |
| Motor Vehicle and Heavy Motor Vehicle.                                    |       |       |
| Applications of I C Engines.                                              |       |       |
| 02. Construction of I. C. Engine 20 Marks                                 |       |       |
| Specific Objectives:                                                      |       |       |
| Describe function, Construction and material of engine components.        |       |       |
| > Understand Types of drives required to operate, draw and describe       |       |       |
| various mechanisms.                                                       |       |       |
| Understand and draw Valve and port timing diagrams.                       |       |       |
| Content                                                                   |       |       |
| 2.1 Function, construction, materials and manufacturing methods of Engine |       |       |
| components 16 Marks                                                       |       |       |
| • Cylinder block, Cylinder liners – Dry and Wet, Cylinder head, Inlet and |       |       |
| Exhaust manifold, Tappet cover, Timing cover, Crank case. Oil Sump.       | 10    | 20    |
| • Crank Mechanism: Piston and piston rings, Piston pin, Connecting rod,   |       |       |
| Crank Shaft, Cam shaft, Flywheel, Bearings, Oil seals, Gaskets. (Only     |       |       |
| the Name of commonly used Manufacturing Method is expected)               |       |       |
| • Valve and Valve Operating Mechanisms: Overhead Valve and                |       |       |
| Overhead Cam arrangements.                                                |       |       |
| Valve Cooling.                                                            |       |       |
| 2.2 Camshaft Drives and Valve Timing 4 Marks                              |       |       |
| • Camshaft drives: Timing Gears. Chain and Belt drive Relation            |       |       |
| between speed of camshaft and crank Shaft.                                |       |       |
| • Valve timing Diagram, Port timing Diagram.                              |       |       |

| 03. Fuel and Air Feed System 16 Marks                                                                                                    |      |    |
|------------------------------------------------------------------------------------------------------------------------------------------|------|----|
| Specific Objectives:                                                                                                                     |      |    |
| Draw layout of fuel and air feed systems.                                                                                                |      |    |
| > Understand, describe, and compare the construction and working or                                                                      | f    |    |
| components involved in the systems.                                                                                                      |      |    |
|                                                                                                                                          |      |    |
| Content                                                                                                                                  |      |    |
| 3.1 Petrol fuel supply system. 8 Marks                                                                                                   |      |    |
| • Conventional Petrol Engine: Gravity feed, Pump feed (Layout                                                                            | ,    |    |
| Function of Components and location).                                                                                                    |      |    |
| • Construction and working of components: Fuel Tank, Fuel Filter, S. U                                                                   | . 08 | 16 |
| Electrical Fuel Pump, Air cleaners – dry type and Oil wetted types.                                                                      | 00   | 10 |
| • Working Principle of Simple Carburettor, Air Fuel ratio requirements                                                                   | ,    |    |
| Circuits in Two-wheeler carburettor and Solex carburettor.                                                                               |      |    |
| 3.2 Diesel Fuel supply system 8 Marks                                                                                                    |      |    |
| • Diesel Engine: Need and requirements of Fuel Injection Systems.                                                                        |      |    |
| • Layout of Fuel Injection systems – Individual pump, Unit injector                                                                      |      |    |
| System, Distributor system and Common ran system.                                                                                        |      |    |
| • Fuel injector and types of hozzles.                                                                                                    |      |    |
| • Fuel metering in Fuel Injection Pump (Inline pump and Distributor                                                                      |      |    |
| Working principle of Machanical Covernor in Fuel Injection Dump                                                                          |      |    |
| • Working principle of Mechanical Governor in Fuel injection Fullip.                                                                     |      |    |
| Specific Objectives:                                                                                                                     |      |    |
| Understand ignition systems                                                                                                              |      |    |
| <ul> <li>Understand firing order of the engine.</li> </ul>                                                                               |      |    |
| <ul> <li>Compare various types of mufflers</li> </ul>                                                                                    |      |    |
| Content                                                                                                                                  |      |    |
| 4.1 Introduction to Ignition System 4 Marks                                                                                              | 04   | 08 |
| • Requirements of ignition system.                                                                                                       | -    |    |
| • Magneto and Battery Ignition systems (Working only).                                                                                   |      |    |
| • Firing order used in 3,4 and 6 cylinder engines                                                                                        |      |    |
| 4.2 Types of Exhaust system 4 Marks                                                                                                      |      |    |
| • Function of Exhaust manifold.                                                                                                          |      |    |
| • Construction, Working and types of silencer / Mufflers.                                                                                |      |    |
| 05. Cooling and Lubrication systems 20 Marks                                                                                             |      |    |
| Specific Objectives:                                                                                                                     |      |    |
| Identify components and types of cooling and lubrication systems                                                                         |      |    |
| Compare Cooling and Lubrication systems.                                                                                                 |      |    |

# Practical: Skills to be developed:

# Intellectual skill:

- > Understand working principle of S.I. / C.I. engine
- Select special tools used for engine disassembly / assembly.
- Identify engine components.
- Identify components of the engine systems.
- > Interpret results from engine power observations and calculations.

# Motor Skills:

- > Sketch engine components and engine system components.
- Measure certain parameters with the help of dynamometer, air box, fuel measuring burette, exhaust gas calorimeter, measuring tools.

# **Practicals:**

- 1. Use Special Tools In Dismantling And Assembling By Identifying Tools, Demonstrating and Arranging The Practice Of Same.
- 2. Operate Cut Section Engine Model To Understand Engine Nomenclature and Operate Engine.
- 3. Identify and Observe Location Of Various Engine Components.
- 4. Trace Induction System and Fuel Supply System Curve to Understand the Characteristics.
- 5. Dismantle Ignition System and Distributor Assembly, To Understand The Functions.
- 6. Dismantle Cooling System, Identify Components and Their Functions.
- 7. Dismantle Lubrication System, Identify Components. Draw Layout.
- 8. Prepare Heat Balance Sheet And Plot Performance Characteristics Curve of An Engine After Trial.
- 9. Conduct Morse Test On Multicylinder Engine & Calculate Frictional Power & Mechanical Efficiency.
- 10. Dismantle & Assemble An Engine.

# Notes:

- 1. Practicals may be performed in a group of 4 to 6 students.
- 2. Engine testing practicals may be performed by the batch.

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

# **Rationale:**

This subject is Core Technology subject for Automobile Engineering course. This subject is part of Automobile systems concerning control of vehicles. Knowledge of this subject is required in the subjects like Automobile Component Design, Vehicle maintenance, vehicle testing. Conceptual knowledge of this subject is useful for understanding and improving the performance of Automobile system.

# **General Objectives:**

Students will be able to:

- 1. Understand construction, working and functions of Automobile Systems.
- 2. Understand construction, working and functions of Automobile control systems such as steering, braking and suspension.
- 3. Comp are the developments in body engineering, control systems and safety equipment

# Learning Structure:

| • Rigid and independent Suspension.                                       |    |     |
| • Types of Independent suspension system-McPherson strut, wishbone        |    |     |
| type.                                                                     |    |     |
| • Semi-elliptical Leaf spring, coil spring, torsion bar arrangement,      |    |     |
| • Construction and working of Air Suspension System.                      |    |     |
| 3.2 Construction and working of- 8 Marks                                  |    |     |
| • Shock absorbers - Telescopic and Gas filled                             |    |     |
| Anti roll bar or stabilizer bar.                                          |    |     |
| <b>4: Body Engineering and Safety Devices.</b> 16 Marks                   |    |     |
| Specific Objectives:                                                      |    |     |
| Know various types of materials used for automobile body.                 |    |     |
| Understand protective treatment of automobile body.                       |    |     |
| Know latest developments in safety devices.                               |    |     |
| Content:                                                                  | 06 | 16  |
| • Types of bodies and materials used in body construction                 |    |     |
| • Protective and anticorrosive treatments, painting and repainting        |    |     |
| procedure.                                                                |    |     |
| • Safety devices –air bags, exhaust brake, emergency brake, central       |    |     |
| locking, Collapsible steering.                                            |    |     |
| 5: Car Heating Ventilation and Air Conditioning System (HVAC)             |    |     |
| Specific Objectives:                                                      |    |     |
| > Understand the basic principles of HVAC system.                         |    |     |
| > Know the comfort conditions of the occupants.                           |    |     |
|                                                                           |    |     |
| • Fundamentals of Refrigeration and air conditioning.                     | 06 | 16  |
| • Description of vapour compression cycle with components in the          |    |     |
| circuit.                                                                  |    |     |
| • Layout and operation of HVAC.                                           |    |     |
| • Type of refrigerants used in car air conditioning and their properties. |    |     |
| Human comfort conditions.                                                 |    |     |
| Temperature control system, humidity control.                             |    |     |
| 6: Vehicle Performance : 08 Marks                                         |    |     |
| Specific Objectives:                                                      |    |     |
| Know and describe various resistances experienced by a vehicle.           |    |     |
| > Understand the effects of resistances on a vehicle.                     |    |     |
| Content:                                                                  |    |     |
| • Resistance faced by the vehicle- Air resistance, rolling resistance,    | 04 | 08  |
| gradient resistance                                                       |    |     |
| • Definitions- traction, tractive efforts, drawbar pull, gradeability and |    |     |
| acceleration, pitching, bouncing, rolling, sway and yaw.                  |    |     |
| • Stability of vehicle on turn and slopes (No mathematical treatment).    |    |     |
| Concept of Streamline shape of a vehicle body                             | 40 | 100 |
| Total                                                                     | 48 | 100 |

# **Practical:**

Skills to be developed:

# **Intellectual Skills**:

Student will be able to.

- 1. Identify parts like front axle, steering, brakes, suspension system.
- 2. Classify the system according to their application.
- 3. Select proper tools and their range.
- 4. Understand the construction and working of the system under consideration.

# **Motor Skills:**

Student will be able to.

- 1. Sketch the different systems and their components.
- 2. Handle tools, equipment and instruments.
- 3. Dismantle and assemble various system assemblies.

# **List of Practicals:**

|    | Know your Automobile Systems laboratory through, listing the systems, models, and         |  |  |  |
|----|-------------------------------------------------------------------------------------------|--|--|--|
| 01 | charts in laboratory with their purpose.                                                  |  |  |  |
| 01 | • Listing the tools used in dismantling and assembly of various Automobile                |  |  |  |
|    | Systems.                                                                                  |  |  |  |
| 02 | Observe the steering linkages, draw its layout. Dismantle the steering gear box, identify |  |  |  |
| 02 | its type, sketch its components and assemble it.                                          |  |  |  |
| 03 | Observe and sketch different types of Front Axles.                                        |  |  |  |
|    | • Observe and draw the layout of hydraulic braking system. Dismantle master               |  |  |  |
|    | cylinder, wheel cylinder and remove brake drum, identify and sketch the                   |  |  |  |
| 04 | components and assemble it.                                                               |  |  |  |
|    | Observe and draw the layout of hydraulically operated air/vacuum                          |  |  |  |
|    | assisted braking system                                                                   |  |  |  |
|    | • Observe and sketch the construction of Mc pherson and wishbone type                     |  |  |  |
|    | suspension with labels.                                                                   |  |  |  |
| 05 | • Dismantle semi elliptical leaf spring, sketch its components with labels and            |  |  |  |
| 05 | understand its working.                                                                   |  |  |  |

|    | components with labels and understand its working.                                        |  |  |  |
| 06 | Visit to automobile service station of heavy vehicle to observe air suspension system,    |  |  |  |
| 00 | air brakes, power steering system and draw layout. Write a report                         |  |  |  |
|    | Visit to Automobile Body Building and Body Manufacturing Industry, Prepare a report       |  |  |  |
| 07 | considering following points - Layouts, Body Construction, Body Materials, Body           |  |  |  |
|    | Repairs and Painting Procedure.                                                           |  |  |  |
| 08 | Observe and draw the layout of HVAC system. Measure the ambient temperature and           |  |  |  |
| 00 | temperature at various locations inside the car. Describe the control systems.            |  |  |  |

## Notes:

- **1.** A number of practicals may be started simultaneously.
- 2. The practicals may be performed in a group of 6 to 8 students.

### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

# **Rationale:**

It is a core technology subject in Mechanical Engineering Discipline. Mechanical Engineers often come across various machines in practice. They should be able to identify and interpret various elements of machines in day to day life. In maintaining various machines, a diploma engineer should have sound knowledge of fundamentals of machine and mechanism. It will be helpful for them to understand the mechanisms from operational point of view in a better way. This subject imparts the kinematics involved in different machine elements and mechanisms like gear, cam-follower, follower, belt-pulley, flywheel, brake, dynamometer, clutch, etc.

Detailed knowledge of these aspects with deep insight into the practical applications develops a professional confidence in them to become successful Engineer.

This subject serves as a prerequisite for subjects like Machine Design to be learned in higher semester.

# **Objectives:**

# The student will be able to:

- 1. Understand different machine elements and mechanisms.
- 2. Understand Kinematics and Dynamics of different machines and mechanisms.
- 3. Draw cam profile suitable to various displacement diagram.
- 4. Select Suitable Drives and Mechanisms for a particular application
- 5. Understand the function, operation and application of flywheel and governor.
- 6. Understand the function, operation and application of brake, dynamometer, clutch and bearing

7. Find magnitude and plane of unbalanced forces.

# Theory:

| Topic and Content                                                                         | Hours | Marks |
|-------------------------------------------------------------------------------------------|-------|-------|
| 1. Fundamentals and type of Mechanisms                                                    |       |       |
| Specific objectives:                                                                      |       |       |
| Define various terms related to mechanisms.                                               |       |       |
| Explain construction and working of various mechanisms                                    |       |       |
| 1.1 Kinematics of Machines:- Definition of Kinematics, Dynamics, statics,                 |       |       |
| Kinetics, Kinematic link, Kinematic pair and its types, constrained motion                |       |       |
| and its types, Kinematic chain and its types, Mechanism, inversion, machine               |       |       |
| and structure 8 Marks                                                                     | 07    | 16    |
| 1.2 Inversion of Kinematic Chain                                                          | 07    | 10    |
| • Inversion of four bar chain, coupled wheels of Locomotive, Beam engine, Pantograph.     |       |       |
| • Inversion of single slider Crank chain –Pendulum pump, Rotary I.C.                      |       |       |
| Engine mechanism, Oscillating cylinder engine, Whitworth quick return                     |       |       |
| mechanism. Quick return mechanism of shaper.                                              |       |       |
| • Inversion of Double Slider Crank Chain- Scotch Yoke Mechanism,                          |       |       |
| Elliptical trammel, Oldham's Coupling8 Marks                                              |       |       |
| 2. Velocity and Acceleration in Mechanisms                                                |       |       |
| Specific objectives                                                                       |       |       |
| Draw velocity and acceleration diagram for given mechanism                                |       |       |
| 2.1 Concept of relative velocity and relative acceleration of a point on a link,          |       |       |
| angular acceleration, inter-relation between linear and angular velocity and              |       |       |
| acceleration.                                                                             |       |       |
| 2.2 Analytical method (No derivation) and Klein's construction to determine               | 08    | 16    |
| velocity and acceleration of different links in single slider crank mechanism.<br>8 Marks |       |       |
| 2.3 Drawing of velocity and acceleration diagram of a given configuration,                |       |       |
| diagrams of simple Mechanism. Determination of velocity and acceleration                  |       |       |
| of point on link by relative velocity method(Excluding Coriollis component                |       |       |
| of acceleration) 8 Mark                                                                   |       |       |
| 3. Cams and Followers                                                                     |       |       |
| Specific objectives                                                                       |       |       |
| Define the terms related to Cam                                                           |       |       |
| Classify Cams and Followers                                                               |       |       |
| Draw cam profile as per the given applications                                            |       |       |
| 3.1 Concept, definition and applications of Cams and Followers. Cam                       |       |       |
| terminology                                                                               | 06    | 12    |
| 3.2 Classification of Cams and Followers.                                                 |       |       |
| 3.5 Different follower motions and their displacement diagrams - Uniform                  |       |       |
| 4 Morko                                                                                   |       |       |
| 3.4 Drawing of profile of radial cam with knife adap, and rollar follower with and        |       |       |
| without offset with reciproceeting motion (graphical method)                              |       |       |
| 8 Marks                                                                                   |       |       |
| <b>A Power Transmission</b>                                                               |       | 1     |
| Specific objectives                                                                       |       |       |
| Give broad classification of Drives                                                       | 10    | 20    |
| <ul> <li>Select Suitable Drives and Mechanisms for a particular application</li> </ul>    |       |       |

| <ul> <li>Calculate various quantities like velocity ratio, belt tensions, slip, angle of contact, power transmitted in belt drives</li> <li>4.1 Belt Drives- flat belt, V-belt &amp; its applications, material for flat and V-belt. Selection of belts, angle of lap, length of belt, Slip and creep. Determination of velocity ratio of tight side and slack side tension, centrifugal tension and initial tension, condition for maximum power transmission (Simple numericals)</li> <li>4.2 Chain Drives- Types of chains and sprockets, velocity ratio. Advantages &amp; Disadvantages of chain drive over other drives, Selection of Chain &amp; Sprocket wheels, methods of lubrication 4 Marks</li> <li>4.3 Gear Drives - Classification of gears, Law of gearing, gear terminology. Types of gear trains, their selection for different applications. Train value &amp; velocity ratio for simple, compound, reverted and epicyclic gear trains</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                    |            |    |

### **Practicals:** Skills to be developed:

# **Intellectual Skills:**

- 1. Determine velocity and acceleration of links in a given mechanism.
- 2. Analyse balancing of rotating masses in a single plane.
- 3. Interpret interrelationship between components of various braking mechanisms.
- 4. Compare various power transmission devices.

# Motor Skills:

- 1. Drawing of velocity and acceleration diagrams.
- 2. Dismantle and assemble given brakes and clutches.
- 3. Draw cam profiles for a given application
- 4. Draw velocity and acceleration diagram of the given mechanisms
- 5. Draw force polygon for unbalanced masses revolving in same plane

Note - The Term work shall consist of Journal / lab manual and A-3 size sketch book.

# **List of Practical:**

- 1. Sketch and describe working of quick return mechanism for a shaper. Find the ratio of time of cutting stroke to the return stroke to understand quick return motion in shaping operation.
- 2. Sketch and describe the working of the following mechanisms with its application,
  - a) Bicycle free wheel sprocket mechanism
  - b) Geneva mechanism
  - c) Ackerman's steering gear mechanism
  - d) Foot operated air pump mechanism
- 3. Determine velocity and acceleration of various links of the given two mechanism, by relative velocity method for analysis of motion of links.
- 4. Determine velocity and acceleration in an I. C. engine's slider crank mechanism by Kleins's construction.
- 5. Draw the profile of a radial cam for the given follower type to obtain the desired follower motion.
- 6. Determine slip, length of belt, angle of contact in an open belt drive to understand its performance.
- 7. Draw a schematic diagram of centrifugal governor and describe its working. Draw a graph between radius of rotation versus speed of governor to understand its function.

- 8. Dismantle and assemble mechanically operated braking mechanism of two wheelers. Sketch the two wheeler braking system and identify the functions of various components.
- 9. Dismantle and assemble multi-plate clutch of two wheeler. Draw neat sketch and state the functions of various components.
- 10. Determine graphically counterbalance mass and its direction for complete balancing of a system of several masses rotating in a single plane.

# **Rational:**

The purpose of introducing Professional practices is to fulfill the need of students to stand in today's global market with knowledge and confidence. This can be achieved by arranging industrial visits, expert lectures attitude to present them-selves, get alternative solutions and validation of the selected alternatives, socially relevant activities, and modular courses. Professional Practices is helpful in broadening technology base of students beyond curriculum. Model making exercises allow students to think more creatively and innovatively and inculcating habit of working with their own hands. Modular courses are introduced with a view of learning and acquiring higher technology skills through industry experts and consultants from the respective fields.

# **Objectives:**

The student will be able to:

- 1) Acquire information from different sources.
- 2) Prepare notes for given topics
- 3) Present seminar using power projection system.
- 4) Interact with peers to share thoughts.
- 5) Work in a team and develop team spirit.

# **Intellectual Skill:**

Student will be able to-

- 1) Search information from various resources.
- 2) Prepare notes on selected topics.
- 3) Participate in group discussions.

# **Motor Skills:**

- 1) Observe industrial practices during visits.
- 2) Prepare slides / charts for presentation in seminar.
- 3) Develop a model

# **Learning Structure:**

| Applications | Gaining confidence in report writing and presentations skills in identified contents of curriculum, apply knowledge in model making. Developing self learning habbit. |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|              |                                                                                                                                                                       |
| Procedures   | Writing skill, expert lectures, seminars, industrial visit, material conversion processes, brain storming technique.                                                  |
|              |                                                                                                                                                                       |
| Concepts     | Industry Institute Interaction, Team work, brain storming, information search.                                                                                        |
|              |                                                                                                                                                                       |
| Facts        | Contents of identified topics, Industrial experts, models, equipments, machinery, projection system, etc.                                                             |

## **Content:**

| Topic & Content                                                                                                      | Hours |
|----------------------------------------------------------------------------------------------------------------------|-------|
| 1: Information Search –                                                                                              |       |
| Information search be made through manufacturers catalogue, Hand books, magazines                                    |       |
| journal and websites, and submit a report on any Two Topics in a group of 3 to 4                                     |       |
| students, report size shall not be more than 10 pages.                                                               |       |
| Following topics are suggested, any other equivalent topics may be selected.                                         |       |
| i) Present scenario of electric power generation in Maharashtra state /India.                                        |       |
| ii) Composite materials – Types, properties & application                                                            |       |
| iii) Material handling equipments commonly used in industries.                                                       |       |
| iv) Advances in Automobile engines.                                                                                  |       |
| v) Hydraulic steering systems of Automobile.                                                                         |       |
| vi) Mechanisms used to produce straight-line motion                                                                  |       |
| vi) Mechanisms used for generating intermittent motion                                                               |       |
| viii) Advanced surface coating techniques like chemical vapor deposition ion                                         | 10    |
| implantation physical vapor deposition                                                                               | 10    |
| ix) Types of cutting tools- specification materials and applications                                                 |       |
| x) Booking of E-Tickets for Railways/Buses/Air travel                                                                |       |
| x) Profiles of 2 multinational companies                                                                             |       |
| xi) Figure lubricants, coolants and additives                                                                        |       |
| xii) Englie fublicants, coolants and additives                                                                       |       |
| xin) ABS(anti lock braking systems)                                                                                  |       |
| xiv) ADS(alli lock blaking systems)<br>xiv) MDEI(multi point fuel injection) system                                  |       |
| xv) MPFI(multi point fuel injection) system<br>xvi) Pole of MIDC MSSIDC DIC Einensiel institutions in development of |       |
| xvi) Role of MIDC, MSSIDC, DIC, Financial institutions in development of                                             |       |
| industrial sector.                                                                                                   |       |
| xvii) Solar energy systems - Components and their functions, applications                                            |       |
| xviii)Design data book - Study and use of types of data.                                                             |       |
| 2. Lectures by professionals/Industry Experts-                                                                       |       |
| Two lectures of two hour duration be arranged on any two topics suggested below or any                               |       |
| other suitable topics to acquire practical information beyond scope of curriculum.                                   |       |
| Students shall prepare a brief report of each lecture as a part of their term work.                                  |       |
| 1) Components of project Report.                                                                                     |       |
| ii) Various loan schemes of banks, LIC and other agencies for education and                                          |       |
| other purposes.                                                                                                      |       |
| iii) Use of plastics & rubbers in Automobiles industries.                                                            |       |
| iv) Type of processes used to protect material surfaces from environmental effect.                                   |       |
| v) Product life cycle.                                                                                               | 06    |
| vi) Industrial application of mechatronics.                                                                          | 00    |
| vii) Special features of CNC machines                                                                                |       |
| viii) Gear manufacturing & gear teeth finishing processes.                                                           |       |
| ix) Gear boxes-industrial & Automobile applications.                                                                 |       |
| x) Super-finishing operation & their industrial applications.                                                        |       |
| xi) Processing methods for plastic components.                                                                       |       |
| xii) Features of modern boilers                                                                                      |       |
| xiii) Strainers and filters –Types, functions and applications                                                       |       |
| xiv) Industrial drives-Types, components, comparison and applications.                                               |       |
| xv) Introduction to Apprenticeship Training Scheme                                                                   |       |
| 3. Seminars:                                                                                                         |       |
| One seminar be arranged on the subjects related to 4 <sup>th</sup> semester. Or topics beyond                        |       |
| curriculum.                                                                                                          | 06    |
| Each student shall submit a report up to 10 pages and deliver the seminar.                                           |       |
| batch size – 2-3 students.                                                                                           |       |

| Source of information – books, magazine, Journals, Website, surveys,                       |    |
|--------------------------------------------------------------------------------------------|----|
| Topics suggested for guidance-                                                             |    |
|                                                                                            |    |
| i) Clutches- Types, Principles, working, & applications.                                   |    |
| ii) High pressure boilers.                                                                 |    |
| iii) Heat exchangers-Types, working, applications.                                         |    |
| iv) Hydraulic turbines-Types, working, & applications.                                     |    |
| v) Hydraulic pumps -Types, working, & applications.                                        |    |
| vi) Sensors -Types, principle, & applications.                                             |    |
| vii) Super conductor technology - Types, principle, & applications.                        |    |
| viii) Semi conductors Types, materials, & applications.                                    |    |
| ix) Industrial breaks- Types, construction, working, & applications.                       |    |
| 4. Industrial Visits                                                                       |    |
| Structured industrial visits be arranged and report of the same shall be submitted by each |    |
| student to form a part of the term work.                                                   |    |
| No of visits- At least one                                                                 |    |
| Scale of industry- medium scale unit, large scale unit.                                    |    |
| Group size- practical batch                                                                |    |
| Report-not exceeding 7 to 10 pages.                                                        |    |
| Purpose :                                                                                  |    |
| ➤ To study the profile of industry                                                         |    |
| ➢ To see the advanced manufacturing processes & machinery.                                 |    |
| ➢ To observe working of CNC machines, work centre's ,flexible manufacturing                |    |
| systems                                                                                    |    |
| > To observe working in foundry , forging shop, press shop, heat treatment shop etc.       |    |
| ➢ To observe chip less manufacturing machines & processes.                                 |    |
| ➤ To study process sheets , quality control charts & production drawings, metallurgical    |    |
| testing laboratory                                                                         | 08 |
| ➢ To observe Tool room, standards room etc.                                                |    |
|                                                                                            |    |
| Following types of industries may be visited in & around the institute.                    |    |
| i) Foundry                                                                                 |    |
| ii) Forging units                                                                          |    |
| iii) Sheet metal processing unit                                                           |    |
| iv) Machine/ Automobile component manufacturing unit                                       |    |
| v) Fabrication unit/ powder metallurgy component manufacturing unit.                       |    |
| vi) Machine tool manufacturing unit.                                                       |    |
| vii) Any processing industry like chemical, textile, sugar, agriculture, fertilizer        |    |
| industries.                                                                                |    |
| viii) Auto workshop / four wheeler garage.                                                 |    |
| ix) City water supply pumping station                                                      |    |
| x) Hydro electric power plant,                                                             |    |
| xi) Wind mills, Solar Park                                                                 |    |

| 5. Socially Relevant Activities                                                               |            |
|-----------------------------------------------------------------------------------------------|------------|
| Conduct any one activity through active participation of students and write the report.       |            |
| Group of students- maximum 4                                                                  |            |
| Report- Not more than 6 pages                                                                 |            |
| List of suggested activities- ( activities may be thought in terms of campus improvement)     |            |
| i) Awareness about carbon credit                                                              |            |
| ii) Anticorruption movement                                                                   | 06         |
| iii) Awareness about cyber crimes.                                                            | 00         |
| iv) Developing good citizens.                                                                 |            |
| v) Management of E- WASTE                                                                     |            |
| vi) Recycling of waste materials.                                                             |            |
| vii) Accident prevention & enforcement of safely rules.                                       |            |
| viii) Awareness about pollution and pollution control.                                        |            |
| ix) Any other relevant activity may be performed)                                             |            |
| 6. Mini Projects                                                                              |            |
| Students, in a group of 4, shall perform any one activity listed below.                       |            |
| i) Model making out of card board paper, wood thermocol, plastics, metal, clay etc            |            |
| a) Any new idea/principle converted into model                                                |            |
| b) Mechanisms                                                                                 |            |
| c) Jigs/fixtures                                                                              |            |
| d) Material handling device etc                                                               |            |
| ii) Toy making with simple operating mechanisms                                               |            |
| iii Layout of workshop/department/college                                                     |            |
| iv) Experimental set un/testing of a parameter                                                |            |
| y) Display heard indicating different type of machine components like hearing                 |            |
| fasteners couplings nine fitting valves cams & followers exploded views of                    |            |
| assemblies type of welding equipment welding rods (drawings photo graphs)                     |            |
| vi) Any relevant project which will make students to collect information & work with          |            |
| their own hands                                                                               |            |
| Students shall arrange exhibition of all mini projects in the class/hall and present the task |            |
| to the audience/ experts/examiners. The student shall submit a brief report (May 5 pages)     | 12         |
| of the mini project                                                                           | 12         |
| OR                                                                                            |            |
| Modular course:                                                                               |            |
| Modular courses on any one of the suggested or equivalent tonic be undertaken by a            |            |
| group of 15 to 20 students                                                                    |            |
| i) Advance features in CAD                                                                    |            |
| i) Mashing of solid model using any suitable software                                         |            |
| iii) Developing Unfold Sheet or Hyperblank by using Planking Software                         |            |
| iv) CAM Software                                                                              |            |
| v) Paging of DLC programming                                                                  |            |
| v) Basics of FLC programming<br>vi) Applications of machatronics                              |            |
| vi) Applications of mechanomics                                                               |            |
| vii) riping recimology                                                                        |            |
| viii) vioueni packaging technology                                                            |            |
| x) Dio proventia Dobota                                                                       |            |
| x) Dio-pheumatic Kobols<br>vi) Dio miniary                                                    |            |
|                                                                                               | 40         |
| Total                                                                                         | <b>4</b> ð |

### Note:-

The students who wish to undergo in plant training shall go through details regarding it in the syllabus of Professional Practices – III for fifth semester and complete the training in summer vacation at the end of fourth semester examination.

All such students will be assessed out of ten marks as per guidelines mentioned in the curriculum of professional practice III in the fifth semester

www.engineeringforchange.org www.wikipedia.com www.slideshare.com www.teachertube.com

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

# INDUSTRIAL TRAINING (OPTIONAL)

# Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

Code number for TH, PR, OR, TW are to be given as suffix 1, 4, 8, 9 respectively to the subject code.

**Course Name : All Branches of Diploma in Engineering & Technology** 

# Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG/AU

Semester : Fourth

Subject Title : Environmental Studies

Subject Code : 17401

**Teaching and Examination Scheme:** 

| Teaching Scheme |    |    |              |      | Examinati | on Scheme |     |       |
|-----------------|----|----|--------------|------|-----------|-----------|-----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH   | PR        | OR        | TW  | TOTAL |
| 01              |    | 02 | 01           | 50#* |           |           | 25@ | 75    |

# **\*# Online Theory Examination**

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

# **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

# **Learning Structure:**

# Theory:

| Topic and Contents                                                                                                                       | Hours | Marks |
|------------------------------------------------------------------------------------------------------------------------------------------|-------|-------|
| Topic 1: Nature of Environmental Studies                                                                                                 |       |       |
| Specific Objectives:                                                                                                                     |       |       |
| Define the terms related to Environmental Studies                                                                                        |       |       |
| State importance of awareness about environment in general public                                                                        | 01    | 04    |
| Contents:                                                                                                                                | 01    | 04    |
| • Definition, Scope and Importance of the environmental studies                                                                          |       |       |
| <ul> <li>Importance of the studies irrespective of course</li> </ul>                                                                     |       |       |
| • Need for creating public awareness about environmental issues                                                                          |       |       |
| Topic 2: Natural Resources and Associated Problems                                                                                       |       |       |
| Specific Objectives:                                                                                                                     |       |       |
| Define natural resources and identify problems associated with<br>them                                                                   |       |       |
| Lightifu uses and their eventual situation                                                                                               |       |       |
| <ul> <li>Identify uses and their overexploitation</li> <li>Identify alternate resources and their importance for environment.</li> </ul> |       |       |
| Contents:                                                                                                                                |       |       |
| 2.1 Benewable and Non renewable resources                                                                                                |       |       |
| Definition                                                                                                                               |       |       |
| Associated problems                                                                                                                      |       |       |
| • Associated problems                                                                                                                    |       |       |
| Conoral description of forest resources                                                                                                  |       |       |

| environment                                                      |    |     |
| Human Health and Human Rights                                    |    |     |
| Total                                                            | 16 | 50  |

# **Practical:** Skills to be developed:

# Intellectual Skills:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

# Motor Skills:

- 1. Presentation Skills
- 2. Use of multi media

# **List of Projects:**

**Note:** Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds
- 4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

| 02   |           | 02   | 02            | 50 | 25 #      |           | 25 @ | 100   |

# NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

# **Rationale:**

Every engineering structure such as building, bridges, dams, towers, monuments etc. are supported by soil and rock the stability of these structures depends upon behaviors of soil and capacity of soil to carry loads under different environmental conditions. The soil and rocks are also used as construction materials for embankments, roads, dams, mud walls etc.

Thus it becomes mandatory to learn this subject which includes knowledge of physical properties, classification of soil, its behavior and various techniques to improve soil properties as well as agricultural structures viz. farm stead's, poultry houses, dairy barns, water supply system and sanitations, grain storage structures and silos.

# **Objectives:**

The student will be able to,

- 1. Explain soil as three phase system and establish relationships between soil properties.
- 2. To determine properties of soil by standard tests, procedures and plot particle size distribution curves.
- 3. Determine permeability by constant head and falling head tests by using Darcy's law.
- 4. Obtained Optimum Moisture Content and Maximum Dry Density for any soil samples by performing Proctor compaction tests.

# **Learning Structure:**

# Theory:

| Chapter | Name of the topic                                                    | Hours | Marks |
|---------|----------------------------------------------------------------------|-------|-------|
|         | Overview of Soil Mechanics                                           |       |       |
|         | 1.1 Definition of soil and introduction to soil formation.           |       |       |
|         | 1.2 Importance of soil in Civil Engineering as construction          |       |       |
|         | material and as Foundation material.                                 |       |       |
| 01      | 1.3 Field applications of soil mechanics-for foundation design,      | 04    | 06    |
|         | pavement design, design of earth retaining structures, design of     |       |       |
|         | earthen dams.                                                        |       |       |
|         | 1.4 Various constituents of soil and their importance, soil as       |       |       |
|         | medium of plant growth. Major soils of India.                        |       |       |
|         | Basic soil properties                                                |       |       |
|         | 2.1 Composition of soil, soil as three phase system, weight          |       |       |
|         | relationships, volume relationship, soil structure, factors          |       |       |
|         | affecting soil structure, bulk density, particle density of soil,    |       |       |
|         | soil consistency, Porosity, voids ratio, inter relationships,        |       |       |
|         | Water content, Degree of saturation, specific gravity,               |       |       |
|         | Available soil moisture, Field capacity, Permanent wilting           |       |       |
|         | percentage, Drainable porosity. Wilting point, ultimate wilting      |       |       |
| 02      | and wilting range. Relationships between soil properties.            | 12    | 16    |
| 02      | 2.2 Soil moisture content, methods of soil moisture content          | 12    | 10    |
|         | determinations.                                                      |       |       |
|         | 2.3 Retention of soil moisture, maximum retentive capacity,          |       |       |
|         | 2.4 Experimental determination of water content, unit weight,        |       |       |
|         | specific gravity.                                                    |       |       |
|         | 2.5 Consistency of clay soils, stages of consistency, Atterbergs     |       |       |
|         | limit of consistency, plasticity index, determination of liquid      |       |       |
|         | limit, plastic limit, shrinkage limit.                               |       |       |
|         | 2.6 Numerical problems on above topic                                |       |       |
|         | Soil classification                                                  |       |       |
|         | 3.1 Need for soil classification, Criteria for classification, Grain |       |       |
|         | size classification, classification based on plasticity, symbols     |       |       |

# **Practical:**

# Skills to be developed:

# **Intellectual Skills:**

- 1. Select appropriate method for determining field capacity
- 2. Use various methods to to decide quality of soil

# **Motor Skills:**

- 1. Ability to perform various tests on soil accurately
- 2. Ability to measure various quantities like Specific gravity, Soil permeability etc.

# List of Experiments

- 1. Determination of water content by oven drying method.
- 2. Determination of specific gravity by pycnometer method.
- 3. Mechanical analysis of soil for particle distribution.
- 4. Determination of liquid limit and plastic limit.
- 5. Determination of field capacity and unit weight by core cutter method.
- 6. Determination of field capacity, voids ratio and unit weight by sand replacement method.
- 7. Determination of soil permeability by constant head permeameter.
- 8. Determination of soil permeability by falling head permeameter.
- 9. Determination of Optimum Moisture Content and Maximum Dry Density by standard proctor test.

Course Name : Diploma in Agriculture Engineering Course Code : AU Semester : Fourth Subject Title : Surveying & Levelling Subject Code : 17451

# **Teaching and Examination Scheme**

| Teac | ching Sch | neme | Examination Scheme |     |     |    |     |       |
|------|-----------|------|--------------------|-----|-----|----|-----|-------|
| TH   | TU        | PR   | PAPER<br>HRS       | TH  | PR  | OR | TW  | TOTAL |
| 03   |           | 04   | 03                 | 100 | 50# |    | 25@ | 175   |

# NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

# **Rationale:**

Diploma holders in Agricultural Engineering are vitally engaged in the field work rather than administration and management. In order to take up this job satisfactorily and skill fully, he must study the subject of basic importance like surveying. In the field he has to handle the surveying equipments like compass, plane table, optical squares, cross staff and dumpy level etc. and take readings, make the calculations and prepare the drawings.

For doing so he should be equipped with the knowledge of handling the surveying equipments and prepare the drawings and reports.

# **Objectives:**

The student will be able to,

- 1. Understand the principles and methods of different types of surveys.
- 2. Use the equipments on the field, note the readings
- 3. To make the calculations using the data collected
- 4. Prepare the drawings and reports

# **LEARNING STRUCTURE:**

## Theory:

| Chapter | Name of the topic                                                      | Hours | Marks |
|---------|------------------------------------------------------------------------|-------|-------|
|         | Basics of Surveying                                                    |       |       |
|         | 1.1 Definition of surveying                                            |       |       |
|         | 1.2 Object of surveying                                                |       |       |
| 01      | 1.3 Types of survey                                                    | 03    | 08    |
|         | 1.4 Classification of surveying-plane and Geodetic                     |       |       |
|         | 1.5 Principles of surveying.                                           |       |       |
|         | 1.6 Uses of surveying.                                                 |       |       |
|         | Linear Measurements                                                    |       |       |
|         | 2.1 Study of metric chain: 20m &30m, its components                    |       |       |
|         | 2.2 Study of tape-Types of tapes - linen, metallic, steel and invar.   |       |       |
|         | 2.3 Instruments for marking stations- pegs, arrows, ranging rods       |       |       |

## Practical: Skills to be developed: Intellectual Skills:

- Identify the different instruments for linear measurement and leveling.
- Record and observe necessary observations with the survey instruments.
- Select various types of survey instruments.
- Identify the errors of the survey instruments.
- Reading and Interpretation of drawing (plans/maps)

## **Motor Skills:**

- Measure distances, Bearings and finding Reduced Levels with survey instruments.
- Recording of survey field data collected in Field Book and Leveling Book.
- Prepare drawing (plans/maps) using survey data.

## List of Practicals:

## (All practicals to be booking in field book.)

- 1. Study and use of chain (20 m, 30m) Metallic and steel tapes, Ranging rods, pegs and arrows.
- 2. Direct and Indirect ranging, study and use of line ranger, Measurement of distances with chain and tape.
- 3. Study and use of open cross staff and optical square, measurement of area of five sided traverse by chain and cross staff survey.
- 4. Running a survey line to locate adjacent objects such building, road, trees, electric poles etc. by taking offsets with open cross staff / optical square. Booking field notes.
- 5. Study and use of Prismatic compass components, their functions, adjustments, Observing fore bearings and back bearing of lines, calculation of included angles.
- 6. Observing fore bearing and back bearing of a Five sided closed traverse, identifying the stations affected by local attraction and calculation of corrected bearings.
- 7. Study and use of Dumpy level, components, temporary adjustments and study of leveling staff.
- 8. Carrying out differential leveling, recording the reading in a level field book and calculation of Reduced Levels, (H. I. Method) also applying arithmetic check.
- 9. Carrying out differential levelling, Calculation of reduced Levels (rise and fall method) also applying arithmetic checks.
- 10. Fly levelling carrying bench mark from one point to another point.
- 11. Study and use of auto level temporary adjustments, taking staff readings.
- 12. Contouring by direct / indirect method.
- 13. Setting of contours by level and tube and 'A'frame in the field.
- 14. Measurement of area irregular figure by polar planimeter
- 15. Measurement of area irregular figure by Digital planimeter.
- 16. Study and use of plane table and its accessories, temporary adjustments of plane table. Locating points by method of radiation.
- 17. Locating details by the method of intersection and traversing. Orientation of plane table by back sighting and magnetic meridian.

## List of Projects

- 1. Chain and compass traverse survey- a closed traverse of minimum 5 sides enclosing a building, calculation of included angles and corrected bearings, locating details and plotting on A1 size imperial drawing sheet.
- Profile levelling and cross-sectioning- Running a base line 300M. Length with cross section at every 30m. Length of crossing may be 20m on either side with staff reading @ 10m.interval. Spot levels should be taken at every 10m along the base line. Plotting of L-section and minimum of 3 cross-sections on A1 size imperial drawing sheet.
- 3. Block contouring A block of 100 m X 100 m with spot levels @ 10 m X 10 m and plotting the contours with suitable contour interval by interpolation on A1 size imperial drawing sheet.
- 4. Plane table traversing- running a minimum Five sided traverse enclosing a building using method of traversing. Locating details of building, poles etc. by radiation and intersection method. Plotting the traverse with details on A1 size imperial drawing sheet.

## NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

## **Rationale:**

Now a days the fluid mechanics find wide applications in many situations directly or indirectly. Agricultural engineers are expected to have the knowledge and the understanding of the basic principles and concepts of fluid mechanics both in static and dynamic conditions. This is to enable them to analyse and design systems in which fluid is the working medium.

**Objectives:** The student will be able to,

- 1. Explain the working of mechanical gauges.
- 2. Explain continuity equation and Bernoulli's equation.
- 3. Know types of flow of fluids and practical applications.
- 4. Estimate the discharge through orifices, mouth pieces, notches & weirs.
- 5. Definition of flow through pipes, losses of head due to friction.
- 6. Flow through open channel, velocity of flow in open channel.
- 7. Select the type and size of the pump as per the requirements

Numerical                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Problems                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Topics 5: Flow Through Open Channels                                         |    |     |
|------------------------------------------------------------------------------|----|-----|
| 5.1 Types of channels- artificial & natural, purposes of artificial channel, |    |     |
| Different shapes of artificial channels Geometrical properties of channel    |    |     |
| section - wetted area, wetted Perimeter, hydraulics radius Prismatic         |    |     |
| channel sections, steady- uniform flow through prismatic channel section.    |    |     |
| 5.2 Chezy's equation and Manning's equation for calculation of discharge     |    |     |
| through an open channel, common range of values of Chezy's constants         | 08 | 16  |
| and Manning's constant of different types of channel surfaces. Most          |    |     |
| economical channel section, conditions for most economical channel           |    |     |
| sections.                                                                    |    |     |
| 5.3 Froud's number and its significance. Critical, sub-critical and          |    |     |
| supercritical flow in channel Hydraulic jump and its occurrence in field,    |    |     |
| uses of hydraulic jump. Numerical Problems.                                  |    |     |
| Topics 6: Agricultural Pumps                                                 |    |     |
| 6.1 Centrifugal Pumps                                                        |    |     |
| Centrifugal pumps, description and working, Types of casings and             |    |     |
| impellers, Bearing housing, Stuffing boxes and glands, Drives for            |    |     |
| centrifugal pumps, operation of centrifugal pumps, priming, use of foot      |    |     |
| valve and strainers, Layout and accessories, Maximum height of suction,      |    |     |
| Multistage pumps, Maintenance and repair of centrifugal pumps, causes        |    |     |
| of vibration trouble and remedies, Problems on discharge power and           |    |     |
| efficiency, Selection of pump for given speed and discharge                  |    |     |
| specifications, no problems.                                                 | 11 | 24  |
| 6.2 Reciprocating Pumps                                                      | 11 | 24  |
| Reciprocating pumps, classifications, working of single acting and           |    |     |
| double acting reciprocating pump, plunger and piston pumps, discharge        |    |     |
| of reciprocating pump, theoretical power required, coefficient of            |    |     |
| discharge, slip, negative slip, indicator diagram, separation or             |    |     |
| cavitations, air vessel, simple problems.                                    |    |     |
| Special pumps, jet pumps, Turbine pumps, Submersible pumps,                  |    |     |
| Working principles, no problems                                              |    |     |
| 6.3 Submersible Pumps: description and working, Types of casings and         |    |     |
| impellers                                                                    |    |     |
| Total                                                                        | 48 | 100 |

## Practical: Skills to be developed:

## **Intellectual Skills**:

- a. Interpret test results
- b. Calculate quantities of parameters
- c. Draw graphs

## **Motor Skills:**

- a. Measure different parameters accurately
- b. Adjust levels by operating valves

## **List of Practicals:**

- 1. Measurements of pressure and pressure head by Piezometer, U-tube manometer
- 2. Verification of Bernoulli's theorem
- 3. Reynolds experiment to study types of flow

- 4. Determination of Minor losses in pipes (any two)
- 5. Demonstration of Hydraulic jump
- 7. Determination of coefficient of discharge for given rectangular or triangular notch.
- 8. Determination of coefficient of discharge for a given Venturimeter.
- 9. Determination of hydraulic coefficients for sharp edge orifice
- 10. Study of a model of centrifugal and reciprocating pump.
- 11. Use of characteristic curves/ nomograms /charts / catalogs from manufactures for selection of pump for the designed discharge and head (Refer IS: 9694)

A) Refer IS: 9694 for selection pumps

Course Name : Diploma in Agriculture Engineering Course Code : AU Semester : Fourth Subject Title : Farm Power and Tractor Systems Subject Code : 17453

## **Teaching and Examination Scheme:**

| Teac | ching Scl | neme | Examination Scheme |     |    |    |     |       |
|------|-----------|------|--------------------|-----|----|----|-----|-------|
| TH   | TU        | PR   | PAPER<br>HRS       | TH  | PR | OR | TW  | TOTAL |
| 03   |           | 02   | 03                 | 100 |    |    | 25@ | 125   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

## **Rationale:**

Diploma holders in agricultural Engineering should have the knowledge of different sources of power available at farms for driving the farm machinery and equipment. I.C. Engines and tractors are the primary sources of power available on farms.

The aim of introducing this subject is to equip them with the knowledge of both conventional and non-conventional sources of Power. The contents of this subject have been developed to cater above mentioned needs.

## **Objectives:** The students should be able to:

- 1. Know the Sources of farm power
- 2. Able to classify of IC engines,
- 3. Knows function of the engine, details of construction and maintenance requirements of engine and hence able to look after of the maintenance of engine
- 4. Know Air cleaning, Fuel, Cooling, Lubrication, Valves, Ignition and Governor systems.
- 5. Select Tractor or farm equipment as per requirements
- 6. Know all the systems of tractor

Г

## **Learning Structure:**

\_

| Application | Use of I. C. Engines in farm equipments, Us eof tractor for farming activities, maintenance of tractors and farm equipment.                   |  |  |  |  |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| Procedure   | Acceleration, Speed control, Braking, Maintenance schedules,<br>Trouble shooting                                                              |  |  |  |  |
|             |                                                                                                                                               |  |  |  |  |
| Principle   | Systems in Tractors anf Farm Equipments such as Ignition system,<br>Braking system, Lubricating system, Cooling system, Transmission<br>sytem |  |  |  |  |
|             |                                                                                                                                               |  |  |  |  |
| Concept     | Farm Power, I. C. Engine, Petrol Engine and Diesel Engine, Tractor, Ignition,                                                                 |  |  |  |  |
|             |                                                                                                                                               |  |  |  |  |
| Facts       | Sources of Farm Power, Tractors, I C Engines, I C Engine and Tractor<br>Systems                                                               |  |  |  |  |

## Theory:

| Торіс                                                                            | Hours | Marks |
|----------------------------------------------------------------------------------|-------|-------|
| 1. Sources of Farm Power                                                         |       |       |
| Classification of sources of farm power, The characteristics, advantages and     |       |       |
| disadvantages of different sources of power, Classification of biogas plants,    |       |       |
| Different components of biogas plants, Floating drum type biogas plant, Fixed    | 04    | 08    |
| drum type biogas plant, Pre-requisites of biogas system, Difference between      |       |       |
| floating gas holder type & fixed drum type biogas plant, Ways of collection of   |       |       |
| solar radiations, Classification of wind mills, Performance of wind mills.       |       |       |
| 2. I. C. Engine                                                                  |       |       |
| Different types heat engines, Classification internal combustion engine in       |       |       |
| different ways, Different parts of I. C. engine components & their construction, |       |       |
| Terms related to I. C. engines, Solved Problems, Working of four stroke cycle    | 06    | 10    |
| engine, Working of two stroke cycle engine, Difference between two stroke and    |       |       |
| four stroke engine, Difference between Diesel Engine and Petrol Engine.          |       |       |
| 3. I. C. Engine Systems                                                          |       |       |
| 3.1 Valves, Firing Order & Firing Interval                                       |       |       |
| Different parts in Valve operating system, The different valve arrangements      |       |       |
| used in the engines, Large size flywheel for single cylinder engines, Poor       |       |       |
| balance of single cylinder engines, Valve operating mechanism, Valve             |       |       |
| Clearance, Valve timing diagram, Firing Order (F.O.), Firing Interval (F.I.)     |       |       |
| 3.2 Ignition System of Tractor                                                   |       |       |
| Spark ignition system, Battery ignition system, Components battery ignition      |       |       |
| system, Capacity of Battery, Battery charging, Magneto ignition system           |       |       |
| with neat diagram, Difference in Battery Ignition and Magneto Ignition,          | 08    | 16    |
| Effect of ignition advance and ignition retard, Need of spark advance and        |       |       |
| retard mechanism.                                                                |       |       |
| 3.3 Governors & Methods of Governing                                             |       |       |
| Need of governor, Governing Systems, Hit & Miss System, Throttle                 |       |       |
| System, Difference between Hit & Miss System and Throttle System of              |       |       |
| governing, Construction and working of Centrifugal Governor (Watt                |       |       |
| governor) and Pneumatic Governor, Governor Regulation, Governor                  |       |       |
| Hunting, Difference between Fly wheel and Governor.                              |       |       |

| 4. I. C. ENGINE SUPPORTING SYSTEMS                                             |    |    |
|--------------------------------------------------------------------------------|----|----|
| 4.1 Air Cleaning System of I.C. Engine                                         |    |    |
| Need of air cleaning system, Different types of air cleaners, Oil soaked       |    |    |
| element type of air cleaner, Dry type air cleaner, Oil bath type of air        |    |    |
| cleaner Pre- cleaner.                                                          |    |    |
| 4.2 Fuel System of I.C. Engine                                                 |    |    |
| Requirements of a diesel fuel supply and injection mechanism, Systems of       |    |    |
| fuel injection (Air injection method AND Direct or Solid injection             |    |    |
| method), Fuel supply system in spark ignition system, Carburetor and its       |    |    |
| functions, Functions of carburetor, working of simple carburetor,              | 08 | 18 |
| components of carburetor and their function, Fuel supply system in diesel      | 08 | 10 |
| engine, Turbocharger.                                                          |    |    |
| 4.3 Cooling System                                                             |    |    |
| Purpose of Cooling, Air cooling, Water cooling its types, components &         |    |    |
| functions                                                                      |    |    |
| 4.4 Lubrication System of I.C. Engine                                          |    |    |
| Needs of lubrication, Theory of lubrication, Classification of lubricants,     |    |    |
| Functions of engine oils, Types of lubrication systems, Splash Lubrication     |    |    |
| System, Pressure/Forced feed lubrication system, Main Parts of Lubrication     |    |    |
| System, Crank Case Ventilation.                                                |    |    |
| 5. Tractor                                                                     |    |    |
| Introduction, Classification of tractor and adoptability. Factors affecting    | 02 | 06 |
| selection of Tractor. General idea about different makes, models, in different | 02 | 06 |
| H.P. ranges of tractors.                                                       |    |    |
| 6. Study of transmission systems                                               |    |    |
| 6.1. Clutch                                                                    |    |    |
| Main functions of clutch, Essential features of clutch, Principle of operation |    |    |
| of clutch, Different types of clutch, Working of single plate clutch system.   |    |    |
| Different parts of clutch system, Working of duel plate clutch system, Clutch  |    |    |
| adjustment, Trouble shootings.                                                 |    |    |
| 6.2 Gear Box                                                                   |    |    |
| Need of gear box in tractors, Principle of gearing, Different types of gear    | 10 | 18 |
| box available on tractors, Sliding mesh gear box, Constant mesh gear box,      |    |    |
| Synchromesh gear box, Trouble shootings.                                       |    |    |
| 6.3 Differential and Final Drive                                               |    |    |
| Necessity and function of differential unit in a tractor, Principle of         |    |    |
| operation of differential unit, Operational details of differential unit,      |    |    |
| Transmission efficiency of differential. Differential lock. Final drive        |    |    |
| mechanism.                                                                     |    |    |

| 7. Study of Supporting systems of tractor                                     |    |     |
|-------------------------------------------------------------------------------|----|-----|
| 7.1 Brakes                                                                    |    |     |
| Classification of brakes, Internal expanding shoe brake, Brake pedal free     |    |     |
| play, External contracting shoe brake, Disc brakes, Principle of operation of |    |     |
| hydraulic brake, Working of hydraulic brake system.                           |    |     |
| 7.2 Steering Geometry                                                         |    |     |
| Qualities of steering system, Ackerman steering, Steering geometry, Main      | 08 | 18  |
| parts of steering system, Working of steering system, Steering ratio, Power   |    |     |
| Steering.                                                                     |    |     |
| 7.3 Hydraulic System                                                          |    |     |
| Merits of hydraulic system over mechanical system, Basic characteristics of   |    |     |
| fluids, basic components of hydraulic system. Working of hydraulic system,    |    |     |
| Types of hydraulic system, Position control, Draft control, Mixed control     |    |     |
| 8. Tractor Power Outlets                                                      |    |     |
| Hitching of implements to tractor, Power Take Off (PTO) shaft. Different      | 02 | 06  |
| types of PTO, Belt pulley.                                                    |    |     |
| Total                                                                         | 48 | 100 |

## Practicals: Skills to be developed:

## **Intellectual Skills:**

- 1. Identify various parts of I. C. Engines and know their functions.
- 2. Operate the I. C. Engine under various conditions which occur on the farm.
- 3. Identify tractor parts and know their functions.
- 4. Know how to operate tractor as per the requirement on the farming jobs.

## **Motor Skills:**

- 1. Ability to draw sketches of the parts of I. C. Engine and Tractor
- 2. Operate the tractor under different conditions for its appropriate use on farm
- 3. Ability to identify faults in I. C. Engines/tractors
- 4. Able to identify the places for lubrication and lubricate the machines efficiently and effectively

## **List of Practicals:**

1. Demonstration of different systems of an IC engine; Students to identify Engine parts and functions, working principles etc.

- 2. Operation of two and four stroke engines.
- 3. Demonstration of Valve system, valve timing diagram and valve setting procedure.
- 4. Demonstration fuel system and air cleaning system of IC engine and familiarization with its parts/components, students to identify functions
- 5. Demonstration of cooling system of tractor engine and familiarization with its parts/components.
- 6. Demonstration of lubrication of tractor engine and familiarization with its parts/components.
- 7. Introduction to transmission system and components
- 8. Demonstration of clutch system and trouble shooting.
- 9. Demonstration of different types of gear box, differential and final drive system and trouble shooting.
- 10. Demonstration of brake systems and trouble shooting.
- 11. Study hydraulic system in tractor.
- 12. Visit to Tractor repair workshop & spare part agencies.

## List of Assignments:

Collection of information broacher, service manual/Operators manual from various dealers of the different makes of the Tractor companies and study the specifications of the same.

|------|----------|------|--------------------|-----|----|----|----|-------|--|
| TH   | TU       | PR   | PAPER<br>HRS.      | TH  | PR | OR | TW | TOTAL |  |
| 03   |          |      | 03                 | 100 |    |    |    | 100   |  |

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Seasonal Work (SW).

## **Rationale:**

The subject is very important to understand Economics of Agriculture and also the Agricultural Business aspects to prepare the students for agri business. This deals with importance of Agriculture in India's Economy. It deals with all the aspects of the business such as Accounting, Marketing, Finance, Planning, and Organisation.

Objectives: The student will be able to,

- 1. Know all aspects of Agricultural Business.
- 2. Understand the organisation structure.
- 3. Able to select the financial mode for business operation.

## Theory:

| Topic and Contents                                                          | Hours | Marks |

## **Rationale:**

Manufacturing process is a basic technology course for mechanical engineering. It enhances the skills which the students have acquired in workshop practice. The technician should be introduced to the basic processes of manufacturing. The course will help the student to get familiarize with working principles and operations like with various patterns, molding, casting, fabrication, turning, drilling, brazing etc.

The basic knowledge of these processes will be helpful to select most suitable processes for conversion of raw material into finished product as per the requirement.

## **General Objectives:**

## Student will be able to develop:

- Know and identify basic manufacturing processes for manufacturing different components.
- Operate and control different machine tools and equipments.
- Manufacture job as per specified dimension.
- Inspect the job.
- Adopt the safety practices.

## Theory: Theory to be taught during practical hours.

| 1.2 Types of patterns:                                                                                       |
| Single piece pattern. Split pattern. Match plate pattern. Sweep pattern. Skeleton pattern                    |
| 1.3 Pattern making allowances:                                                                               |
| Shrinkage, draft, machining, distortion, rapping                                                             |
| 1.4 Core prints:                                                                                             |
| Horizontal, vertical, hanging, balancing, wing Colour coding for patterns and core boxes.                    |
| Topic 2: MOULDING                                                                                            |
| 2.1 Moulding Sand                                                                                            |
| 2.1 Moulding Sand<br>2.2 Types: Green Dry Loam Facing, Backing System parting Core sand                      |
| 2.2 Types. Orech, Dry, Loani, Facing, Backing, System, parting, Core sand<br>2 3 Properties of Moulding sand |
| 2.4 Moulding Processes: Green sand, Dry sand, Machine and Shell Moulding                                     |
| Topic 3: CASTING                                                                                             |
| •                                                                                                            |
| 3.1 Casting Principle and operation                                                                          |
| 3.2 Die casting methods: Hot chamber die casting method, Cold chamber die casting method                     |
| 3.3 Melting furnace for ferrous metals: Cupola furnace: Construction and operation, zones,                   |
| capacity, Temperature range                                                                                  |
| 3.3 Melting furnace for non ferrous metals                                                                   |
| 3.4 Electric furnace for steel: Direct arc furnace, High frequency induction furnace                         |
| 3.5 Defects in casting: Causes and remedies, inspection & testing of casting                                 |
| Topic 4: FABRICATION                                                                                         |
|                                                                                                              |
| 4.1 Classification.                                                                                          |
| 4.2 Arc weiding. Principle, Applications, Smelded metal arc weiding, Sub-merged arc weiding                  |
| 4.5 HO/WHO welding<br>A A Resistance welding: Spot Projection Seam Percussion                                |
| 4.5 Gas welding: Techniques, Types of flames, Welding defects                                                |
| 1.6 Soldering and Brazing: Types. Principle and Application                                                  |
| Topic 5: METAL TURNING PROCESS (LATHE MACHINE)                                                               |
|                                                                                                              |
| 5.1 Types of lathes: Light duty, Medium duty and Heavy duty geared lathe, CNC lathe                          |
| 5.2 Specifications                                                                                           |
| 5.5 Basic parts and their functions                                                                          |
| 5.4 Operations and tools – Lurning, parting off, Knurling, facing, Boring, drilling, threading, step         |
| turning, taper turning                                                                                       |
| Practical:                                                                                                   |
| Skills to be developed:                                                                                      |
| *                                                                                                            |
| Intellectual Skills:                                                                                         |

- To develop the skill of manufacturing patterns and their allowances.
- To know and identified different molding methods for different casting methods.
- To understand the molding processes.

## Motor Skills:

- To prepare a pattern making job for casting and moulding.
- To operate lathe machine and to know about speed, feed, depth of cut and to perform different turning operations.
- To fabricate component by using welding.

## List of Practicals:

- 1. One simple wooden and thermocole Pattern Job of maximum 4 students per group, each group should make different type of pattern.
- 2. One turning job on lathe containing the operations like facing, plain turning, step turning, grooving, chamfering.
- 3. Demonstration and assignment on types of molding sands.
- 4. One composite welding job having two different joints. With preparation of joints (Batch of four students per job.)
- 5. Industrial Visit to TIG / MIG welding setup and write report
- 6. Demonstration on molding processes.

## List of Assignments:

• Workshop diary must be maintained by the instructor/lecturer during practical sessions

Student Contact Hours Per Week: 35 Hrs.

## THEORY AND PRACTICAL PERIODS OF 60 MINUTES EACH.

Total Marks : 850

@ - Internal Assessment, # - External Assessment, No Theory Examination, \* - Practicals of Electrical & Electronics at alternate week.

Abbreviations: TH-Theory, TU- Tutorial, PR-Practical, OR-Oral, TW- Term Work, SW- Sessional Work.

\*\* Industrial Training (Optional) - Student can undergo Industrial Training of four weeks after fourth semester examination during summer vacation.

## Assessment will be done in Fifth semester under Professional Practices-III. They will be exempted from activities of Professional Practices-III of 5<sup>th</sup> Semester.

- Conduct two class tests each of 25 marks for each theory subject. Sum of the total test marks of all subjects is to be converted out of 50 marks as sessional work (SW).
- > Progressive evaluation is to be done by subject teacher as per the prevailing curriculum implementation and assessment norms.
- Code number for TH, PR, OR, TW are to be given as suffix 1, 4, 8, 9 respectively to the subject code.
- For CAD software subject MSBTE should decide the contents of the practical every year through identified experts and ensure that these practicals only performed in the institute.

Course Name : Diploma in Chemical Engineering Course Code : CH Semester : Fourth Subject Title : Physical Chemistry and Materials of Construction Subject Code : 17423

#### **Teaching and Examination Scheme:**

| Teac | ching Scl | neme |              |     | Examinati | on Scheme |     |       |
|------|-----------|------|--------------|-----|-----------|-----------|-----|-------|
| TH   | TU        | PR   | PAPER<br>HRS | TH  | PR        | OR        | TW  | TOTAL |
| 03   |           | 02   | 03           | 100 |           |           | 25@ | 125   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

## **Rationale:**

Different chemicals are used in industries to manufacture a desired product. Various reactions are used for manufacturing desired chemicals. These processes depend upon basic concepts of thermodynamics. Contents of this subject will enable the students to understand thermodynamic concepts which are required during kinetic study.

Storage tank, material handling equipment and reactors require careful selection of material of construction. The material of construction should be compatible with chemicals to be handled. The content of this subject will enable the students in understanding types of corrosion, classification of engineering materials and criteria for selection of material of construction.

## **General Objectives:**

## Students should be able to:

- 1. Understand basic concepts of thermodynamics & it's laws.
- 2. Determine degree of freedom of a given system.
- 3. Understand concepts of adsorption and its application in chemical industry.
- 4. Select material of construction for specific chemicals.

## **Learning Structure:**

## 1.1 **Theory: marks**)

• Scope of thermodynamics

| Chapter | Topic and Contents                                                        | Hours | Marks |
|---------|---------------------------------------------------------------------------|-------|-------|
|         | Topic 1: Thermodynamics                                                   |       |       |

## Practical: Skills to be developed: Intellectual Skills:

- 1) Verify the laws and characteristics.
- 2) Analyze given solution and study its thermodynamic properties.
- 3) Understand the set up of experiment.

## Motor Skill:

- 1) Observe the completion of reaction.
- 2) Handle various laboratory regents.
- 3) Accurately measure proper quantity of various chemicals.

## **List of Practicals:**

- 1) To measure the heat of combustion off methyl alcohol and ethyl alcohol.
- 2) To determine the heat of neutralization of acid and alkali.
- 3) Determination of melting point of solid substance.
- 4) Determination of boiling point of liquid.
- 5) Purification of solids by crystallization(potassium chloride and potassium chlorate)
- 6) Verification of the freundrich isotherm in adsorption of acetic acid, benzoic acid by activated charcoal.
- 7) Determination of partition coefficient.

#### \* - Practicals of Electrical & Electronics at alternate week.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Most of the equipments used in chemical industry are electrically powered. A minor electrical faults can be attended by a shop floor chemical engineer. This subject of electrical engg. addresses the fundamental concepts and operating principles of electrical appliances. It will enable the students in better handling and commissioning of the equipments.

The second section of the subject deals with the basic of semiconductor devices and their circuits necessary for the electronic control gadgets. It provides the information about logic gates, digital displays, small signal amplifiers and power supplies. This will help the students in building skills of effective handling of electronic control equipments.

## General Objectives: Student will be able to develop:

- Awareness of Electrical Safety.
- Recognize Electrical fault in Chemical Plant.
- Recognize fault in power supply, display & control panel.
- Understand working of basic semiconductor devices.

## **Learning Structure:**

# Section- I Electrical Engineering

| Topic and Content                                                                             | Hours | Marks |
|-----------------------------------------------------------------------------------------------|-------|-------|
| Topic 1: Basic Fundamentals                                                                   |       |       |
| Specific Objectives:                                                                          |       |       |
| State principle of electromagnetic induction.                                                 |       |       |
| <ul> <li>Calculate electrical power and energy from given data.</li> </ul>                    |       |       |
| Contents:                                                                                     |       |       |
| <ul> <li>Ohm's Law – Simple problems on Ohm's Law</li> </ul>                                  | 07    | 10    |
| • Types of supply – A.C. & D.C., definition, representation &                                 |       | -     |
| comparison.                                                                                   |       |       |
| Principle of electromagnetic induction.                                                       |       |       |
| • Concept of single Phase & Three Phase A.C. supply, comparison.                              |       |       |
| • Electrical power, energy – definition, equation, simple problems.                           |       |       |
| Power factor & its importance                                                                 |       |       |
| Topics 2: D.C. Motor                                                                          |       |       |
| Specific Objectives:                                                                          |       |       |
| Draw electrical circuit diagram of D.C. shunt motor.                                          |       |       |
| Draw diagram & explain armature voltage speed control method.                                 |       |       |
| Contents:                                                                                     |       |       |
| • Working principle construction different parts – their material &                           | 06    | 10    |
| application.                                                                                  |       |       |
| <ul> <li>Types of D.C. motor – Electrical circuit of D.C shunt &amp; series motor.</li> </ul> |       |       |
| <ul> <li>Speed control of D.C Shunt &amp; Series motor.</li> </ul>                            |       |       |
| • Necessity of starter & its principle.                                                       |       |       |
| <ul> <li>Applications of D.C. motors related to chemical plant.</li> </ul>                    |       |       |
| Topics 3: A.C. Motor                                                                          |       |       |
| Specific Objectives:                                                                          |       |       |
| $\rightarrow$ Draw electrical circuit diagram of R – Split single phase induction motor.      |       |       |
| State any four parts & their material used for three phase induction motor.                   |       |       |
| Contents                                                                                      | 05    | 0.9   |
| Contents.                                                                                     | 05    | 08    |
| • Three phase induction motor – working principle, construction &                             |       |       |
| • Construction, working & application of following single phase                               |       |       |
| • Construction, working & application of following single phase                               |       |       |
| B = Snlit C = Snlit                                                                           |       |       |
| Topics 4: Transformer                                                                         |       |       |
| Specific Objectives:                                                                          |       |       |
| <ul><li>Compare core type &amp; shell type transformer.</li></ul>                             |       |       |
| > Define voltage ratio, current ratio & transformation ratio of single phase                  |       |       |
| transformer.                                                                                  | 06    | 10    |
| Contents:                                                                                     |       |       |
| • Working principle of transformer Elementary theory of an ideal                              |       |       |
| transformer.                                                                                  |       |       |

## Practical: Skills to be developed:

## Skills to be developed:

## Intellectual Skills:

- Correlate speed of the motor with its other parameters.
- Identify the simple faults in electrical and electronics systems.

## **Motor Skills:**

- Use various tools and components for different electrical applications.
- Handle various electronic test and measuring equipments.

#### **List of Practicals:**

## Section-I

- 1) To verify ohm's law.
- 2) To measure electrical Power in Single phase AC circuit.
- 3) To plot the Speed & Armature voltage characteristics of DC shunt motor.
- 4) To plot the Speed & field current characteristics of DC shunt motor.
- 5) To determine transformation ratio of single phase transformer.
- 6) To prepare wiring for one lamp controlled by Single way switch.

## Section-II

- 1) To operate the various laboratory equipments & measuring instruments like power Supply, CRO, DMM.
- 2) To plot forward & reverse characteristics of Silicon Diode.
- 3) To measure percentage line regulation of Shunt Zener regulator.
- 4) To measure voltage gain of single stage common Emitter amplifier at 1 khz.
- 5) To verify the truth tables of various logic gates.
- 6) To verify De Morgan's First theorem.

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

This subject covers the requirement of different utilities for the process plant, along with its generation and its effective utilization. Main utilities required for process plants are water, steam, air & refrigerants. Steam & non- steam heating media are important for conversion of raw material to products in reactors & to elevate the temperature in the chemical processes. Refrigeration is important to maintain the temperature in the process plant. Compressed air, process air is used in processes & instrument air is used in pneumatic devices & controls.

## **General Objectives:**

The student will be able to:

- 1. State the principles involved during water treatment, generation of steam and refrigeration cycles.
- 2. Select the different equipments used to run the process plant with different utilities.
- 3. Understand basic calculation involved in steam generation, psychometric operation and refrigeration.

## **Learning Structure:**

## **Theory Content:**

| Topic and Contents                                                                                                                          | Hours | Marks |
|---------------------------------------------------------------------------------------------------------------------------------------------|-------|-------|
| Chapter 1 : Water                                                                                                                           |       |       |
| Specific Objectives:                                                                                                                        |       |       |
| Describe the methods of water treatment                                                                                                     |       |       |
| Explain the problem occurred in Boiler feed water                                                                                           |       |       |
| Contents:                                                                                                                                   |       |       |
| Sources of water hard and soft water     (08 MarKs)                                                                                         | 10    | 20    |

#### Practical: Skills to be developed: Intellectual Skills:

1. Analysis of water.

2. Calculation of humidity & use of humidity chart

3 Calculation of heat load in cooling tower

4. Interpretation of steam data using steam table.

## **Motor Skills:**

- 1. Handling of pH meter, TDS meter
- 2. Handling of thermo pack or boiler
- 3. Handling of Reverse Osmosis system
- 4 Handling of cooling tower

## **List of Practicals:**

- 1. To determine the alkalinity of water.
- 2. To determine the hardness of water.
- 3. To determine the pH using pH meter.
- 4. To determine humidity by using whirling psychrometer/sling psychrometer.
- 5. To observe the operations of boiler / thermo pack using simulator.
- 6. To determine outgoing temperature of water from any cooling tower.
- 7. To analyse RO water based on TDS, pH & hardness
- 8. To measure different pressures of compressed air.
- 9. To read / interpret different properties of steam using steam table.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

## **Rationale:**

Knowledge of measurement of fluid flow and various fluid transportation machinery is useful to transport different process fluids. The knowledge of this subject helps in installation of different fluid transportation machinery. Principals of Fluid Flow operations are useful in understanding mass transfer and heat transfer operation.

## **General Objectives:**

#### Students will be able to

- 1. Understand the concept of viscosity.
- 2. Calculate mass and volumetric flow rates.
- 3. Understand the principles of different flow meters.
- 4. Install and calculate the flow rate of fluid with different flow meters in closed pipe line.
- 5. Understand working of different types of valves
- 6. Understand the principle and working of different fluid flow machinery.

## **Learning Structure:**

## Theory:

## Practical:

## **Intellectual Skills**

- 1. Interpret data and result.
- 2. Calculate various parameters.
- 3. Identify errors and method of minimizing.

## **Motor Skills**

- 1. Handle Equipment
- 2. Measure accurately various parameters.

## **Lists of Practicals:**

- 1. Understand the phenomenon of viscosity, pressure gradient by demonstration.
- 2. Verify Reynolds experiment and calculate the Reynolds number at the end of laminar regime and beginning of turbulent regime.
- 3. Perform experiment based on Bernoulli's theorem and prove that the summation of pressure head, kinetic head and potential head is constant.
- 4. Estimate the fanning friction factor at different flow rate and draw friction factor chart.
- 5. Calculate the coefficient of discharge of a venturimeter and prepare calibration curve.
- 6. Calculate the coefficient of discharge of an orifice meter and prepare calibration curve.
- 7. Calibrate the rotameter and plot the calibration curve.
- 8. Determine head loss due to sudden expansion and contraction.
- 9. Calculate equivalent length of bend, globe valve and gate valve.
- 10. Plot and understand the characteristic curves of a centrifugal pimp by using centrifugal pump test rig.

| 8          | Calculating pressure drop over certain length of pipe using above parameters.           |
| 9          | Equivalent of different pipe fitting having these pipe fittings.                        |
| 10         | Calculating volumetric flow rate by Orificemeter, Venturimeter and Rotameter.           |
| 11         | Calculating H.P. of pump for transporting liquid from one point to other point.         |

| 03   |          | 04   | 03                 | 100 | 50# |    | 25@ | 175   |

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

There are different type of Chemical industries like Small, Medium and Large Scale. Diploma students should able to operate and Control manufacturing process of various Chemicals. From this subject student will get knowledge of manufacture of chemicals like alcohol, phenol, oil, Soap, paper etc.

## **General Objectives:**

## The students will be able to

- 1. Know about Raw materials, Physical & Chemical Properties with Chemical reaction for the manufacture of various Chemicals.
- 2. Know manufacturing process of various chemicals
- 3. Understand uses of various Chemicals.

#### Practical's:

Skills to be developed:

#### **Intellectual Skills:**

- a. Select suitable process of manufacturing
- b. Select proper process condition for getting maximum yield

#### Motor Skills:

- a. Work on manufacturing plant
- b. Set proper temperature and pressure condition
- c. Set controlling steps in manufacturing process

#### **List of Practical's:**

- 1) Estimate the strength of glacial acetic acid by conductometric titration.
- 2) Determine Iodine value of given oil sample by titration method.
- 3) Determine the saponification value of given lubricating oil sample by KOH titration.
- 4) Determine the acid value of given lubricating oil sample by KOH titration.
- 5) Calculate the hiding power of given sample of paint.
- 6) Calculate the percentage of thinner in a given sample of oil paint.
- 7) Prepare phenol formaldehyde resin on the laboratory scale by using phenol and formaldehyde raw material.
- 8) Prepare the soap by batch saponification process and analyze the moisture content of laboratory made soap.
- 9) Prepare ethyl acetate from ethyl alcohol and acetic acid by esterification and determine its density and boiling point.

## Mini Project (any Three):

- 1) Compare moisture content of any three branded Washing Soap in Market (with respect to composition of each soap). Compare with TFM.
- 2) Compare Hiding power of any three branded Paints in Market, Viscosity, % Thinner
- 3) Compare any three refined Oil available in market (with respect to acid value, saponification value)
- 4) Collect information about different types of papers & compare their parameters w.r.t. GSM, folding strength

**Course Name : Diploma in Chemical Engineering** 

Course Code : CH

Semester : Fourth

Subject Title : CAD Software

Subject Code : 17039

## **Teaching and Examination Scheme:**

| Teac | hing Scl | heme | Examination Scheme |    |    |    |     |       |  |
|------|----------|------|--------------------|----|----|----|-----|-------|--|
| TH   | TU       | PR   | PAPER<br>HRS       | TH | PR | OR | TW  | TOTAL |  |
|      |          | 02   |                    |    |    |    | 25# | 25    |  |

## **Rationale:**

Drawing is the language of engineers. It conveys the meaning for construction and erection of Chemical Plant. Now a days computer has become an effective tool for preparing drawing through the software CAD. This subject provides sufficient practice to make use of CAD and draw required drawings.

## **General Objective:**

After studying the subject students will be able to

- Draw process equipments.
- Draw and modify various objects
- Draw plant layout

## Learning Structure:

## List of Practical

| Sr. No. | Name of Topic                                                                                                 | Hours |
|---------|---------------------------------------------------------------------------------------------------------------|-------|
| 1       | Practice of basic commands such as draw, modify etc. (Related commands should be covered in practical period) | 04    |
| 2       | Draw symbols as per IS 3232                                                                                   | 04    |
| 3       | Draw flow diagram for given chemical process (any four )                                                      | 12    |
| 4       | Redraw the given Plant, Equipment layout and Utilities line diagram                                           | 12    |

## Note:

- 1. Give different process for drawing of flow sheet.
- 2. For practical number 4, teacher has to provide drawing.
- 3. Printout of each CAD sheet will be part of Teamwork.

## **Rationale:**

Engineering diploma holders are basically intended to work in industries. Their placements and selection for the jobs is based on the campus interview conducted by respective companies. Since the candidate is supposed to work and carry out actual engineering practices in the industries, his confidence, attitude and ability to communicate with the subordinates is usually tested apart from his technical subject knowledge.

To facilitate this and boost his capabilities the subject of professional practices aims to provide ample opportunities to the students. To accomplish this, industrial visits, lectures by professionals/experts, seminars and group discussions are planned during the semester.

## **Objectives:**

- 1. To acquire information and data of different industry
- 2. To deliver the information and the knowledge required to develop awareness about latest trends in chemical industry.
- 3. To interact with fellow people and present their views.
- 4. To prepare report on industrial visit and expert lectures.

## **Learning Structure:**

## Guidelines for implementing professional practices

- In order to implement contents of professional practice effectively it is necessary for the department to plan the activities for full semester. Minor modifications may be done if required. Following are guidelines for the same.
- Activities to be guided and monitored by the faculty of the concerned department only.
- Involve students in related activities to a great extent to develop learning to learn skills.
- Arrange industrial visits and expert lectures on convenient days. Periods of PP may be allocated to concerned faculty members whose periods may be lost.
   Ensure to carry out all activities suggested.

## Activities:

| Contents                                                                                 | Hours |
|------------------------------------------------------------------------------------------|-------|
| 1. Industrial Visits                                                                     |       |
| Industrial visits to be arranged and report of the same to be submitted by individual    |       |
| students to form the part of the term work. The report to contain information in respect |       |
| to                                                                                       |       |
| a. Raw material required                                                                 |       |
| b. Finished product to be produced                                                       |       |
| c. Capacity of the plant                                                                 |       |
| d. Utilities required and their consumption                                              |       |
| e. Man power requirement                                                                 |       |
| f. General costing                                                                       | 12    |
| g. Various equipments, unit operations and unit processes involved                       |       |
| h. Storage and handling of material                                                      |       |
| i. General layout of the plant                                                           |       |
| Visits to any two of the following.                                                      |       |
| a. Visit to ethanol plant                                                                |       |
| b. Visit to rubber tyre retreading unit                                                  |       |
| c. Visit to electroplating industry                                                      |       |
| d. Visit to a fertilizer industry                                                        |       |
| e. Visit to a plastic industry                                                           |       |
| 2. Lectures                                                                              |       |
| Lectures by professionals / industrial experts / academicians                            |       |
| Two sessions to be held on the following topics                                          |       |
| a. Industrial filtration                                                                 |       |
| b. Mixing and agitation                                                                  | 06    |
| c. Fluid transportation and handling                                                     |       |
| d. Cooling and refrigeration                                                             |       |
| e. Steam generation                                                                      |       |
| f. Introduction to Apprenticeship Training Scheme                                        |       |
| 3. Seminars                                                                              |       |
| Seminar based on information search to be organized from any three of the following      |       |
| areas                                                                                    |       |
| a. Protection of environment                                                             | 10    |
| b. Safety practices in chemical industries                                               | 10    |
| c. General maintenance in chemical plant                                                 |       |
| d. Water purification                                                                    |       |
| e. Non conventional energy sources                                                       |       |
| 4. Group Discussion                                                                      |       |
| The student should discuss in a group of $6 - 8$ and write a brief report on the same.   |       |
| Group discussion to be monitored by faculty members. The following topics to be          |       |
| discussed                                                                                | 12    |
| a. Selection of pumping devices                                                          | 12    |
| b. Treatment of boiler feed water                                                        |       |
| c. Selection of filtration equipments                                                    |       |
| d. Fine chemicals and their applications                                                 |       |
| 5. Student Activities                                                                    |       |
| The group of $3 - 4$ students will perform any one of the following activities           |       |
| a. Comparative statement of prices and specifications                                    | 08    |
| b. Information regarding specifications of different pumps and motors                    |       |
| c. Create data base of past students                                                     |       |

| materials                                                     | Total 48           |
|---------------------------------------------------------------|--------------------|
| n. Concernmention regarding specifications of common of       | ngmeening          |
| the institute.                                                | angineering        |
| e. Collect information regarding various chemical industries  | in the vicinity of |
| pumps and its components                                      |                    |
| d. Collect information regarding material of construction for | pipe fittings,     |

## 1. Books:

| Sr. No. | Title                                                                                                      |
|---------|------------------------------------------------------------------------------------------------------------|
| 1.      | Fourth semester subjects reference books                                                                   |
| 2.      | Journals and magazines - IEEE Journals, IT technologies.                                                   |
| 3.      | Local news papers and events                                                                               |
| 4.      | Apprenticeship Training Scheme:- Compiled By – BOAT (Western Region), Mumbai, Available on MSBTE Web Site. |

## 2. Websites:

1. http://www.wikipedia.com

2. http://www.seminarforyou.com

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

## INDUSTRIAL TRAINING (OPTIONAL)

## Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

Student Contact Hours Per Week: 33 Hrs.

## THEORY AND PRACTICAL PERIODS OF 60 MINUTES EACH.

Total Marks : 900

@ - Internal Assessment, # - External Assessment, No Theory Examination, \$ - Common to all branches, #\* - Online Examination,

 $\beta$  - Common to IF

Abbreviations: TH-Theory, TU-Tutorial, PR-Practical, OR-Oral, TW-Term Work, SW-Sessional Work.

\*\* Industrial Training (Optional) - Student can undergo Industrial Training of four weeks after fourth semester examination during summer vacation.

Assessment will be done in Fifth semester under Professional Practices-III. They will be exempted from activities of Professional Practices-III of 5<sup>th</sup> Semester.

- Conduct two class tests each of 25 marks for each theory subject. Sum of the total test marks of all subjects is to be converted out of 50 marks as sessional work (SW).
- > Progressive evaluation is to be done by subject teacher as per the prevailing curriculum implementation and assessment norms.
- > Code number for TH, PR, OR and TW are to be given as suffix 1, 4, 8, 9 respectively to the subject code.

MSBTE - Final Copy Dt. 30/08/2013

#### **#\* Online Theory Examination**

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

## **Learning Structure:**

## Theory:

## Practical: Skills to be developed:

## **Intellectual Skills**:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

## **Motor Skills:**

- 1. Presentation Skills
- 2. Use of multi media

## List of Projects:

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds

4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

## NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

The aim of the subject is to teach the basic working of the computer motherboard, peripherals and add-on cards. The subject helps the students to do the maintenance of the Computer, peripherals and its add-on cards. The students will be able to select the proper peripheral as per their specification and requirement. This is the core technology subject. The pre-requisite of the subject is Microprocessor. The subject is practical oriented and will develop the debugging skills in the students.

## **Objectives:**

The student will be able to:

- 1. Debug and repair the faults in system.
- 2. Assemble the system.
- 3. Load the operating system and device drivers in the system.

## **Learning Structure:**

## Theory:

## **PRACTICAL:**

Skills to be developed:

## **Intellectual Skills:**

- Understanding basic hardware of computer
- Fault finding of input/output devices.
- Troubleshooting of input/output devices
- Proper connection of input/output devices.

#### **Motor Skills:**

• Proper handling of Computer System Hardware.

## List of Practical:

- 01. Identify and draw the motherboard layout of Intel i3 processor and understand connection and layout of the H67 or P67chipset.
- 02. Perform Basic Input/output System (BIOS) setting and configuration setup using Complementary Metal Oxide Semiconductor (CMOS).
- 03. Format, partition and install a Hard Disk Drive (HDD) and format a pen drive.
- 04. Understand layout, characteristics and functions of different components of Hard Disk Drive (HDD) as a storage device.
- 05. Install Video Graphics Array (VGA) or Super Video Graphics Array (SVGA) display cards.
- 06. Install and understand the working of printer.
- 07. Install and understand the working of Input/output devices such as scanner and modem.
- 08. Connect Switched Mode Power Supply (SMPS) and identify different parts of SMPS. Understand the working of SMPS and Uninterrupted Power Supply (UPS).
- 09. Use diagnostic software to identify installed computer peripherals and test their working condition.
- 10. Find faults related to Monitor, CPU, Hard disk, Printer and other peripherals.
- 11. Form a pico net using Bluetooth devices and transfer data.
- 12. Assemble PC and install an operating system.

## NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

## **Rationale:**

The world in the information era has become network centric. A Computer networks has been growing with rapid technological progress. Computer communication through networking becomes essential part of our life. We can manage many application like Air Line Reservation, Railway Reservation, E-banking, E-Governance, On-Line shopping, E-learning etc. by clicking mouse button from our own place. Because of this, world become the global village. By considering importance of networking towards all aspects of our life, we here introduce basic concept of networks, network classification, network topologies, network devices, Transmission media, Network reference models, concept of TCP/IP.

This knowledge explores the student for understanding current network management technology.

## **Objectives:**

To develop following skills:

## Intellectual Skills:

- Understand network & can identifying benefits of networks.
- > Understand and describe communication media.
- Compare different types of Topology.
- Compare different types of network devices.
- > Compare OSI and TCP/IP protocol suite.
- Configuration of TCP/IP

## **Motor Skills:**

- 1. Able to handle Computer Network.
- 2. To develop a small Computer Network.

| 03                  |    | 02 | 03           | 100       | 25#       |    | 25@ | 150   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Microprocessor is brain of computer. Intel family is widely used all over the world. 8085 is the 8-bit CPU and 8086 is the 16-bit CPU. 8086 is the base of all upward developed processors. It is more powerful and efficient computing machine. It overcomes all major limitations of the previous processors. It is able to get interfaced with 8-bit, 16-bit systems. IBM PC is introduced in 1980 with 10MB hard disk, one double side double density floppy disk drive, KBD, monitor and asynchronous communications adapter.

This subject covers Basics of 8085, architecture of 8086 along instruction set. It also covers assembly language programming with effective use of procedure and macros. This will act as base for the advanced assembly language programming for next generation microprocessors.

# **General objectives:**

Students will be able to:

- 1. Understand the execution of instructions in pipelining and address generation.
- 2. Write syntax of given instructions.
- 3. Apply instructions in Assembly Language Program for different problem statements.
- 4. Use the procedures and macros in assembly language programming.

18

#### **Learning Structure:**

#### Theory

| Name of Topics                                               | Hours | Marks |
|--------------------------------------------------------------|-------|-------|
| Topic 1: Basics of Microprocessor                            |       |       |
| Specific Objective: Students will be able to                 |       |       |
| ➢ Draw the architecture of 8085                              |       |       |
| Define the functions of different pins of 8085               |       |       |
| Identify status of different flags                           |       |       |
| 1.1 Evolution of Microprocessor and types                    | 04    | 08    |
| 1.2 8085 Microprocessor,                                     |       |       |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 1 1 |     |

#### Skills to be developed:

# Intellectual skills:

- Use of programming language constructs in program implementation.
- To be able to apply different logics to solve given problem.
- To be able to write program using different implementations for the same problem
- Study different types of errors as syntax semantic, fatal, linker & logical
- Debugging of programs
- Understanding different steps to develop program such as
  - Problem definition
  - Analysis
  - Design of logic
  - ➢ Coding
  - ➢ Testing
  - > Maintenance (Modifications, error corrections, making changes etc.)

# Motor Skills:

• Proper handling of Computer System.

# **Practicals:**

# List of Practical:

- 1. Identify the Assembly Language programming tools like Assembler, linker, debugger, editor.
- 2. Write an Assembly Language Program to add / subtract two 16 bit numbers.
- 3. Write an ALP to find sum of series of numbers.
- 4. Write an ALP to multiply two 16 bit unsigned/ signed numbers.
- 5. Write an ALP to divide two unsigned/ signed numbers (32/16, 16/8, 16/16, 8/8)
- 6. Write an ALP to add / Sub / multiply / Divide two BCD numbers.
- 7. Write an ALP to find smallest/ largest number from array of n numbers.
- 8. Write an ALP to arrange numbers in array in ascending/ descending order.
- 9. Write an ALP to perform block transfer data using string instructions / without using string instructions.
- 10. Write an ALP to compare two strings using string instructions / without using string instructions.
- 11. Write an ALP to display string in reverse order, string length, Concatenation of two strings.
- 12. Write an ALP to convert Hex to Decimal, Decimal to Hex.

#### NOTE:

> Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.

# > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

The ability to organize & process information is key to success in modern age. Object Oriented Programming has become the most preferred approach for software projects. It offers a new and powerful way to cope up with complexity of real world problems. Among the OOP languages available, C++ is one of the most widely used language.

Instead of viewing program as a series of steps to be carried out, OOP approach views it as a group of objects that have certain properties & can take appropriate actions.

Object Oriented Concepts like inheritance, polymorphism, data abstraction and encapsulation etc. requires knowledge of C++, which also acting as base for programming languages like Java, Object Oriented Modeling & Designing (OOMD), VC++.

#### **Objectives:**

To develop following skills:

#### Intellectual Skills:

- 1. Understand the concepts of OOP.
- 2. Implement programs based on OOP concepts.
- 3. Understand basic fundamentals of C++.
- 4. Develop small software applications using C++.

#### **Motor Skills:**

1. Proper Handling of Computer System.

#### MSBTE - Final Copy Dt. 30/08/2013

#### **Learning Structure:**

# Theory:

# List of Practical:

| Sr. No. | Title of Experiment                                                                                                                                                             |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1       | Write a program to Input & Output data for exchanging values of two variables.                                                                                                  |
| 2       | Develop a program to declare a class 'person' having data members name, age & salary. Accept and display this data for one object.                                              |
| 3       | Write a program to declare a class 'employee' having data members name and age.<br>Accept and display the data for three objects.                                               |
| 4       | Write a program to show how static member is shared by multiple objects of the same class.                                                                                      |
| 5       | Develop a program to find out the mean value of a given number using friend function.                                                                                           |
| 6       | Develop a program to print student details of 'stud' class using constructor and destructor                                                                                     |
| 7       | Write a program to find prime number using default argument in constructor                                                                                                      |
| 8       | Write a program to find out the payroll system using single level inheritance.                                                                                                  |
| 9       | <ul><li>A. Write a program to find student details using multiple inheritance.</li><li>B. Write a program to compute total marks of student using virtual base class.</li></ul> |
| 10      | Write a program to evaluate the largest number of an array using pointer                                                                                                        |
| 11      | Write a program to search a character in a string using pointer.                                                                                                                |
| 12      | Write a program to input and display code and price for two items using pointer to object.                                                                                      |

| 13 | Write a program to display roll_no and name of student using 'this' pointer.                          |
|----|-------------------------------------------------------------------------------------------------------|
| 14 | Write a program to using function overloading to calculate volume of cube, cylinder & rectangular box |
| 15 | Write a program to overload unary '' operator                                                         |
| 16 | Write a program to display the output using the virtual function.                                     |

| 01              |    | 02 |                    |    | 50# |    | 25@ | 75    |

#### **Rationale:**

In recent trend, every computer system interacts with the user through a graphical user interface. User can understand the information in both textual and graphical format. Computer Graphics is the study of techniques to improve communication between human and machine. Computer Graphics is one of the most existing, rapidly growing computer fields. The word Computer Graphics means pictures, graphics or scene drawn with the help of a computer system. After studying this subject, a learner will be able to work with 2-dimensional, 3-dimensional graphics, multimedia and animation techniques. It is also useful in many fields such as Engineering drawing, graphics, architectural design, video games and animations.

#### **General Objectives:**

To develop following skills:

#### **Intellectual Skills:**

- Specifically develop the logic and algorithms for developing basic graphics software.
- Use of programming language constructs in program implementation.
- To be able to apply different logics to solve given problem.
- To be able to write program using different implementations for the same problem
- Study different types of errors such as syntax, semantic, fatal, linker & logical
- Debugging of programs
- Understanding different steps to develop program such as
  - Problem definition
  - o Analysis
  - o Design of logic
  - o Coding
  - Testing
  - Maintenance (Modifications, error corrections, making changes etc.)

#### **Motor Skills:**

- Ability to handle keyboard efficiently.
- Ability to use input and output devices.
- Ability to execute C programs.
- Ability to handle computer system carefully.
- Ability to understand Color combinations.

#### **List of Practical:**

| Sr.<br>No. | Title of Experiment                                                       | No. of<br>Hours |
|------------|---------------------------------------------------------------------------|-----------------|
| 1          | Implement DDA algorithm and Bresennham's algorithm for line drawing.      | 02              |
| 2          | Implement DDA algorithm and Bresennham's algorithm of circle drawing.     | 02              |
| 3          | Implement Flood fill algorithm for Polygon filling.                       | 02              |
| 4          | Implement scan-line algorithm for polygon filling.                        | 02              |
| 5          | Write Program for 2-D transformations -> scaling, Rotation                | 03              |
| 6          | Write Program for 2 D transformations -> shearing and Translation program | 03              |
| 7          | Write and implement program for rotation about an arbitrary point         | 03              |
| 8          | Implement Cohen- Sutherland algorithm for line clipping.                  | 03              |
| 9          | Implement midpoint subdivision algorithm for line clipping.               | 03              |
| 10         | Implement Sutherland-Hodgeman algorithm for polygon clipping.             | 03              |
| 11         | Write a program to draw a curve using Bezier's algorithm                  | 03              |
| 12         | Write a program to draw fractal lines.                                    | 03              |

#### List of Practical oriented Projects:

1) Oral geometry insertion for character animation (Develop a system to create an animated mouth in head geometry)

2) Online storyboarding system (Create a system that will keep still images, text descriptions, sample animations, sample audio for each scene of an animation)

#### **Rationale:**

Our world is witnessing a measure change in communication pattern with expansion of industrial sphere, as industries demanding more competitive and challenging students.

To create multicultural working professionals, student must have positive attitude, confidence, and ability to communicate in addition to basic technological skill.

The purpose of introducing professional practices is to provide opportunity to diploma holder to undergo activities which will enable them to develop confidence. The semester is planned with expert lectures, seminar on technical topics and soft skills, group discussion along with mini project.

#### **Objectives**:

#### **Intellectual Skills:**

Students should be able to:

- 1. Acquire the knowledge from different resources.
- 2. Present a given topic effectively in a seminar and build a stage-daring.
- 3. Interact with colleague through group discussion.

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

# INDUSTRIAL TRAINING (OPTIONAL)

# Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

#### **#\* Online Theory Examination**

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

# **Learning Structure:**

## Theory:

| Topic and Contents                                                           | Hours | Marks    |
|------------------------------------------------------------------------------|-------|----------|
| Topic 1: Nature of Environmental Studies                                     |       |          |
| Specific Objectives:                                                         |       |          |
| Define the terms related to Environmental Studies                            |       |          |
| ➢ State importance of awareness about environment in general public          | 0.4   | <u>.</u> |

| Human Health and Human Rights                                                    |    |    |
| Total                                                                            | 16 | 50 |

# Practical: Skills to be developed:

#### **Intellectual Skills**:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

# Motor Skills:

- 1. Presentation Skills
- 2. Use of multi media

# List of Projects:

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds

4. Study of simple ecosystems of ponds, river, hill slopes etc.

# Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

| 03              |    | 04 | 03           | 100 | 50#       |           | 25@ | 175   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

To introduce students to the basic information on commercial dyes and dyeing techniques and Machinery used in industry for dyeing fibres yarn and fabrics. Students will develop an understanding for various traditional modern method of printing and finishing

#### **Objective:**

To make the students well versed with theoretical aspects as well as industrial procedures at various stages of wet processing such as Dyeing, Printing & Finishing.

# **CONTENTS:** Theory

| Chapter | Contents                                                                | Hours | Marks |
|---------|-------------------------------------------------------------------------|-------|-------|
|         | Preparation of fabrics:                                                 |       |       |
|         | Specific objectives:                                                    |       |       |
|         | Students will be able to understand                                     |       |       |
|         | Importance and Objects of preparatory processes before                  |       |       |
|         | textile colouration.                                                    |       |       |
|         | Method of evaluation for preparatory processes.                         |       |       |
|         | 1.1 Introduction to wet processing of textiles,                         |       |       |
|         | 1.2 Impurities in grey fabric,                                          |       |       |
|         | 1.3 Importance of preparation of fabrics,                               |       |       |
|         | 1.4 Mechanical cleaning of fabrics,                                     |       |       |
| 1       | <ul> <li>Objects of shearing &amp; cropping and singeing.</li> </ul>    | 12    | 24    |
|         | - Introduction to shearing, cropping & singeing machines                |       |       |
|         | used in industry.                                                       |       |       |
|         | 1.5 Object of Grey Inspection, Inspection machines, Criteria for        |       |       |
|         | rejection,                                                              |       |       |
|         | 1.6 Objects of wet preparatory processes viz. desizing, scouring,       |       |       |
|         | bleaching and mercerization.                                            |       |       |
|         | 1.7 Enzymatic method of desizing & scouring of cotton.                  |       |       |
|         | 1.8 Evaluation of efficiency of desizing & scouring.                    |       |       |
|         | 1.9 Bleaching of cotton with Hydrogen peroxide.                         |       |       |
|         | - Measurement of whiteness index using CCM.                             |       |       |
|         | Dyeing process & machinery:                                             |       |       |
|         | Specific objectives:                                                    |       |       |
|         | Students will be able to understand                                     |       |       |
|         | Procedure for dyeing different textile substrates.                      |       |       |
|         | Working of important dyeing machinery.                                  |       |       |
|         | 2.1 Definition of dye, pigment, percentage shade, exhaustion,           |       |       |
| 2       | expression.                                                             | 10    | 24    |
| 2       | 2.2 Dye selection for various textile substrates,                       | 12    | 24    |
|         | 2.3 Important steps involved in dyeing of cellulosics with direct,      |       |       |
|         | sulphur, vat and reactive dyes and azoic colours.                       |       |       |
|         | 2.4 Dyeing of polyester with disperse dye by HTHP & Thermosol           |       |       |
|         | method,                                                                 |       |       |
|         | 2.5 Dyeing of P/C blend,                                                |       |       |
|         | 2.6 Concept of dyeing coulon with natural dyes,                         |       |       |
|         | 2.7 working of Jigger, which and Padding Mangle.                        |       |       |
|         | Printing Methods:<br>Specific abjectives:                               |       |       |
|         | Specific objectives:                                                    |       |       |
|         | Difference between dueing and printing                                  |       |       |
|         | <ul> <li>Various styles and methods of printing.</li> </ul>             |       |       |
|         | <ul> <li>Procedure for printing different textile substrates</li> </ul> |       |       |
| 3       | 3.1 Objects                                                             | 10    | 20    |
| 5       | 3.2 Difference between dveing & printing                                | 10    | 20    |
|         | 3.3 Important print paste ingredients & their functions                 |       |       |
|         | 3.4 Introduction to Direct discharge and resist style of printing       |       |       |

Course Name : Diploma in Fashion & Clothing Technology Course Code : DC Semester : Fourth Subject Title : Knitted Fabric Design & Technology Subject Code : 17459

#### **Teaching and Examination Scheme:**

| Teaching Scheme |    |    | Examination Scheme |     |    |     |     |       |
|-----------------|----|----|--------------------|-----|----|-----|-----|-------|
| TH              | TU | PR | PAPER<br>HRS.      | TH  | PR | OR  | TW  | TOTAL |
| 03              |    | 02 | 03                 | 100 |    | 25# | 25@ | 150   |

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 100 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Knitted fabrics due to its stretchable and favorable properties are in good demand and it is expected to rise day by day. Knitted fabrics find uses for under garments, sports wear, summer and winter dresses, etc. to large extent. This sector is now diversifying into synthetics, domestic fabric, carpets, technical and geotextiles.

# **General Objectives:**

The student will be able to,

- a. Understand Warp & Weft Knitting machine.
- b. Identify different knitted structures.
- c. Understand pattern cutting & sewing of knitted garments.

#### **Learning Structure:**

#### **Detailed Contents:**

| Chapter | Contents                                                                                                                        | Hours | Marks |
|---------|---------------------------------------------------------------------------------------------------------------------------------|-------|-------|
| INO.    | Topic 1 Introduction of Knitting Drocess                                                                                        |       |       |
|         | Specific objective: The student will able to                                                                                    |       |       |
|         | • To define knitting process                                                                                                    |       |       |

#### **Practical:** Skills to be developed:

#### Intellectual Skills:

- 1) The functions of knitting mechanisms.
- 2) Different knitted fabric structures.
- 3) The designs of needles and cams.

#### **Motor Skills:**

- 1) Identify different knitted fabric structures.
- 2) Draw diagrams of needles and cams.

- 1) Study of passage of yarn through Single jersey circular knitting m/c.
- 2) Study of passage of yarn through flat knitting m/c.
- 3) Study of passage of yarn through double jersey machine..
- 4) Introduction of fabric analysis single jersey fabric
- 5) Fabric analysis of single jersey knitted fabric
- 6) Fabric analysis of double jersey knitted fabric Rib.
- 7) Fabric analysis of double jersey knitted fabric Interlock
- 8) Fabric analysis of single jersey knitted fabric-derivative
- 9) Study of effect of stitch length on knitted fabric.
- 10) Visit to a modern knitting unit
- 11) Visit is a garment manufacturing unit.

#### List of Assignments:

1. Find the needle order & cam order for different knitted structure.

#### NOTE:

Two tests each of 25 marks are to be conducted as per the schedule given by MSBTE. Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional work (SW).

#### **Rational:**

The Garments manufacturing process require numerous machineries for their manufacture. Also certain super-specialized machineries are used in this filed. This subject introduces these machineries and uses, their assemblies & parts in detail.

#### **General Objectives:**

To impart knowledge in students about garment production Machinery & its detail, including parts & accessories.

#### **Rational:**

This subject will give specific application of the developed concept in developing textile design. Innovation, creation with the help of high performance tool of CAD will help the user to transfer his creativity within no time.

#### **General Objectives:**

Students will learn different concepts and application of those concepts in developing textile designs. How ideas are formed and implemented in the process of design development, Human skills and computer skills will be utilized for the formation of innovative designs as per the requirement of current market trends are concerned. History to modern design trends will be exposed to the students. Students will have hands on experience of developing designs for men, women and kids as well as home textiles.

#### **Detailed contents of Theory topics to be taught during practical hours:**

**Topic No.1** \* Selection of thread spacing & thread diameter in the warp and weft directions for shirting, sarees and home textiles.

- Selection of colours of warp and weft as per the end use
- Select the weaves as per the requirements
- Observe simulation & modify it if necessary

Topic No.2 \* Use of different tools for design development in printing

- Image development and colour processing for printed design
- Development of half-tone design
- Development of different designs for various end uses in printing.

**Topic No.3** \* Use of software for creating various woven & printed designs and storing the same for development of design library for further reference.

#### **Practice:**

| Sr. No. | Practical                                                                             |
|---------|---------------------------------------------------------------------------------------|
|         | A) Development of textile design with weaving software (12 hrs)                       |
|         | 1) Development of stripes shirting design                                             |
|         | 2) Development of checks shirting design                                              |
| 1       | 3) Development of extra warp design                                                   |
|         | 4) Development of extra weft design                                                   |
|         | 5) Development of saree design with body border and pallov                            |
|         | 6) Development of home textiles                                                       |
|         | B) Development of textile design with print software (12 hrs.)                        |
|         | 1) Development of ladies dress material design                                        |
|         | 2) Development of all over scarce design                                              |
| 2       | 3) Development of kinds wear design                                                   |
|         | 4) Development of shirting design – stripes                                           |
|         | 5) Development of shirting design checks                                              |
|         | 6) Development of home textiles                                                       |
| 3       | C) Preparation and development of design library for woven & printed design. (8 hrs.) |

#### **Rationale:**

Most of the diploma holders join industries. Due to globalization and competition in the industrial and service sectors the selection for the job is based on campus interviews or competitive tests.

While selecting candidates a normal practice adopted is to see general confidence, ability to communicate and their attitude, in addition to basic technological concepts.

The purpose of introducing professional practices is to provide opportunity to students to undergo activities which will enable them to develop confidence. Industrial visits, expert lectures, seminars on technical topics and group discussion are planned in a semester so that there will be increased participation of students in learning process.

#### **Objectives:**

Student will be able to:

- 1. Acquire information from different sources.
- 2. Prepare notes for given topic.
- 3. Present given topic in a seminar.
- 4. Interact with peers to share thoughts.
- 5. Prepare a report on industrial visit, expert lecture.

#### **Learning Structure:**

| Sr. No. | Activities                                                                  | Hours     |  |  |  |  |  |  |
|---------|-----------------------------------------------------------------------------|-----------|--|--|--|--|--|--|
|         | Industrial Visits                                                           |           |  |  |  |  |  |  |
|         | Structured industrial visits be arranged and report of the same shall be    |           |  |  |  |  |  |  |
|         | submitted by the individual student, to form a part of the term work.       |           |  |  |  |  |  |  |
|         | The industrial visits may be arranged in the following areas / industries : |           |  |  |  |  |  |  |
|         | 1) Garment industry                                                         |           |  |  |  |  |  |  |
|         | 2) Apparel marketing                                                        |           |  |  |  |  |  |  |
|         | 3) Apparel merchandising                                                    |           |  |  |  |  |  |  |
| 1       | 4) Garment chemical processing industry                                     | 14        |  |  |  |  |  |  |
|         | 5) Quality Testing laboratories of Garments in industries or                |           |  |  |  |  |  |  |
|         | reputed organizations                                                       |           |  |  |  |  |  |  |
|         | 6) Fashion Merchandising                                                    |           |  |  |  |  |  |  |
|         | 7) Fashion Marketing                                                        |           |  |  |  |  |  |  |
|         | 8) Manufacturing organizations for observing various manufacturing          |           |  |  |  |  |  |  |
|         | processes of Yarn & Fabric Production.                                      |           |  |  |  |  |  |  |
|         | 9) Knitting Industry.                                                       |           |  |  |  |  |  |  |
|         | Lectures by Professional / Industrial Expert lectures to be organized       |           |  |  |  |  |  |  |
|         | from any two of the following areas:                                        |           |  |  |  |  |  |  |
|         | 1) Interview Techniques.                                                    |           |  |  |  |  |  |  |
| 2       | 2) Modern machines in garmenting                                            |           |  |  |  |  |  |  |
|         | 3) Applications of CAD/CAM in fashion & apparel manufacturing.              |           |  |  |  |  |  |  |
|         | 4) Testing of fabrics for apparel manufacturing.                            |           |  |  |  |  |  |  |
|         | Information Search:                                                         |           |  |  |  |  |  |  |
|         | Information search can be done through manufacturer's catalogue,            |           |  |  |  |  |  |  |
|         | websites, magazines, books etc. and submit a report any one topic.          |           |  |  |  |  |  |  |
|         | Following topics are suggested:                                             |           |  |  |  |  |  |  |
| 3       | 1) Different types of needles.                                              | 08        |  |  |  |  |  |  |
|         | 2) CAD/CAM Software.                                                        |           |  |  |  |  |  |  |
|         | 3) Accessories for Garments.                                                |           |  |  |  |  |  |  |
|         | 4) Apparel production process.                                              |           |  |  |  |  |  |  |
|         | 5) Fashion Designing.                                                       |           |  |  |  |  |  |  |
|         | 6) Fashion Merchandising.                                                   |           |  |  |  |  |  |  |
|         | Seminar:                                                                    |           |  |  |  |  |  |  |
| 4       | student shall submit a report of at least 10 pages and deliver a seminor    | 08        |  |  |  |  |  |  |
|         | student shall submit a report of at least 10 pages and deliver a seminar    |           |  |  |  |  |  |  |
|         | (Presentation time – 10 minutes)                                            |           |  |  |  |  |  |  |
|         | Mini Project / Activities: (any one)                                        |           |  |  |  |  |  |  |
|         | 1) Stitching a trouser /woman's wear/kid's wear with own pattern            |           |  |  |  |  |  |  |
| 5       | cutting.                                                                    |           |  |  |  |  |  |  |
|         | 2) Development of different design on a CAD Software.                       |           |  |  |  |  |  |  |
|         | 3) Collection of different accessories used for garments                    |           |  |  |  |  |  |  |
|         | Total                                                                       | <b>48</b> |  |  |  |  |  |  |

Course Name : Diploma in Fashion & Clothing Technology

Course Code : DC

Semester : Fourth

Subject Title : Industrial Training

Subject Code : 17051

#### **Teaching and Examination Scheme:**

| Teac | hing Scl | neme |               |    | Examinati | on Scheme |    |       |

|      |          | *    |               |    |           |           |    |       |

## **\*\* Industrial training for six weeks to be completed during summer break after Fourth semester.** Assessment to be done in Fifth Semester

#### **Objectives:**

- Experience the industrial environment for textile industrial processes, equipment & practices.
- Collect data about Plant lay out, equipment and machines-specifications and working available in different sections and collect data.
- Experience operation of machines and process parameters of spinning and weaving departments for the target production and collect data.
- Appreciate factory utilities power water illumination men and material movement, pollution control, industrial safety etc.
- Carryout the material testing at different stages of yarn and fabric production for quality.
- Experience maintenance schedules of all the equipment and collect information on the effects of negligence of maintenance.
- Diagnose problems and find solutions to problems related with operation, and maintenance of equipment.
- Study the organization structure, job description, job specifications, promotional schemes, motivational strategies, etc.
- Collect data on production incentives, methods study and time & motion studies.
- Critical study of all activities with a view to find the areas for improvement.
- Devise solution to problem areas.
- Collect information / data for project work and seminars.

However, the detailed list of areas of study, working and data collection has been prepared and is enclosed in **3.5** – **Specific area of study and working.** The student should regularly refer to this list and accordingly choose the areas and acquire the knowledge information and skills.

#### **GUIDE LINES FOR INPLANT TRAINING**

#### GENERAL INFORMATION OF THE ORGANISATION:

- 1. History and Organization.
- 2. Types of Garment produced.
- 3. Quantity of Garments produced Per Day
- 4. Buyer's Information
- 5. Market: Local / Export.
- 6. Lay out of all departments with dimensions.
- 7. Process Flow Chart.

#### **GENERAL OBSERVATION OF THE FOLLOWING DEPARTMENTS:**

#### **Training:**

- 1. Who is head?
- 2. Training duration
- 3. Psycho motor Activities
- 4. Hand eye co-ordination Activities

#### Merchandising:

- 1. Who is head?
- 2. People / designations involved in- their roles and responsibilities
- 3. Documents maintained
- 4. Duties of merchandiser
- 5. Types of samples to be sent to buyer to get approval.

#### **Production Planning & Control**

- 1. Who is head?
- 2. People / designations involved in- their roles and responsibilities
- 3. Documents maintained
- 4. Responsibilities
- 5. Planning of material required to in house including wastages and allowances

#### **Fabric Store:**

- 1. Who is head?
- 2. People / designations involved in- their roles and responsibilities
- 3. Documents maintained
- 4. Type of Fabric used- Technical specifications if so.

#### MSBTE - Final Copy Dt. 30/08/2013

#### 17051DC4

#### w.e.f Academic Year 2012-13

- 5. Fabric Inspection, Classification of faults.
- 6. Shade sorting
- 7. Fabric grading systems- four point/ ten point
- 8. Quality levels- Acceptation and rejection

#### Sampling & CAD:

- 1. Who is head?
- 2. People / designations involved in- their roles and responsibilities
- 3. Documents maintained
- 4. Study of Manual / CAD System of pattern making.
- 5. Types of machines in Sampling Dept.
- 6. Types of samples prepared.

#### **Cutting Department:**

- 1. Who is head?
- 2. People / designations involved in- their roles and responsibilities
- 3. Documents maintained
- 4. No. and types of machines in Cutting Dept.- their technical specification,
- 5. Study of Manual and Automatic Cutting Machine.
- 6. Study of Fabric Laying and Cutting Process.
- 7. Production per shift.
- 8. Bundling, ticketing, relaying

#### **Sewing Department:**

- 1. Who is head?
- 2. People / designations involved in- their roles and responsibilities
- 3. Documents maintained
- 4. No. and types of machines in Sewing Dept.- their technical specification like Speed & Efficiency.
- 5. No. of lines set and active
- 6. No. of machines per line.
- 7. Type of machines in the line.
- 8. Shift wise productivity and ancillary labor.
- 9. Transportation of Material.
- 10. Various production systems followed- linear, skill center
- 11. Observations at various modules- front, back, collar, cuff, assembly and special operations.
- 12. Quality inspection at various stages.

#### 17051DC4

#### **Embroidery:**

- 1. Who is head?
- 2. People / designations involved in- their roles and responsibilities
- 3. Documents maintained
- 4. No. and types of machines in Embroidery Dept.- their technical specification like Speed & Efficiency.

# Finishing (Checking, Button Sewing & Buttonhole, Inspection, Washing, Pressing, Packing, Dispatch):

- 1. Who is head?
- 2. People / designations involved in- their roles and responsibilities
- 3. Documents maintained
- 4. No. and types of machines in Finishing Dept.- their technical specification like Speed & Efficiency.
- 5. Defects in Garments and Solutions.
- 6. Type of pressing- form/ flatbed pressing
- 7. Type of packing for Local and Export.
- 8. Type of Storage/ Warehousing/ Dispatch

#### **Quality Control Department:**

- 1. Study of Testing Machines, Calibration of machines.
- 2. Department wise Quality Assurance activities, various studies, Audit.
- 3. Quality Parameters obtained.
- 4. Norms followed.
- 5. Quality Management Programs like TPM, KAIZEN etc.

#### **Finance department:**

The following information can be gathered if possible. If the management is reluctant to supply the information, do not to insist upon.

- 1. Wages and fringe benefits given to the worker of various department.
- 2. Method of depreciation used for cost purpose.
- 3. Administrative charges.
- 4. Cost of Fabric.
- 5. Cost for Garment Production.
- 6. Method of Costing.

#### MSBTE - Final Copy Dt. 30/08/2013

#### w.e.f Academic Year 2012-13

- 7. Electricity Cost.
- 8. Factory Overhead Charges

#### **Industrial Engineering Department:**

- 1. Plant layout- frequency of changing
- 2. Fire handling systems.
- 3. Water requirements and Water supply system.
- 4. Generator Capacity / Type.
- 5. Electrical units consumed per day
- 6. Types of wastage.
- 7. Price of waste obtained in various departments.
- 8. Control and elimination of wastage.

#### Personnel & human resources department:

- 1. Duties / responsibilities of various levels of workers.
- 2. Welfare schemes of workers / staff.
- 3. Labor handling.
- 4. Workload of various categories of workers.
- 5. Sanitation and other human right facilities provided.

#### ASSESSMENT STRATEGY

- a) Report of the industrial training shall be prepared by each student on the basis of his/her actual work done, during the six weeks industrial training.
- b) This report should be submitted in typed and bound form within 1 month after completion of the industrial training.
- c) Industrial training should be assessed equally by external and internal examiners for the oral exam assessment.
- d) Industrial training should be assessed by internal examiner only for term work assessment.

Student Contact Hours Per Week: **30 Hrs.** 

#### THEORY AND PRACTICAL PERIODS OF 60 MINUTES EACH.

Total Marks: 800

@- Internal Assessment, # - External Assessment,

No Theory Examination, \$ - Common to all branches, #\* - Online Theory Examination,

WITH EFFECT FROM 2012-13

**DURATION : 16 WEEKS** 

SCHEME : G

 $\beta$  - Common to ET / EJ / EN / EX / IE / IS / IC / EV / MU / IU / ED / EI

Abbreviations: TH-Theory, TU-Tutorial, PR-Practical, OR-Oral, TW-Term Work, SW-Sessional Work.

\*\* Industrial Training (Optional) - Student can undergo Industrial Training of four weeks after fourth semester examination during summer vacation.

Assessment will be done in Fifth semester under Professional Practices-III. They will be exempted from activities of Professional Practices-III of 5<sup>th</sup> Semester.

Conduct two class tests each of 25 marks for each theory subject. Sum of the total test marks of all subjects is to be converted out of 50 marks as sessional work (SW).

> Progressive evaluation is to be done by subject teacher as per the prevailing curriculum implementation and assessment norms.

> Code number for TH, PR, OR and TW are to be given as suffix 1, 4, 8, 9 respectively to the subject code.

MSBTE - Final Copy Dt. 30/08/2013

Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/

#### ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG/AU

Semester : Fourth

Subject Title : Environmental Studies

Subject Code : 17401

**Teaching and Examination Scheme:** 

| Teaching Scheme |    |    |              | Examinati | on Scheme |    |     |       |
|-----------------|----|----|--------------|-----------|-----------|----|-----|-------|

#### **#\* Online Theory Examination**

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

#### **Learning Structure:**

#### Theory:

#### Practical: Skills to be developed:

#### **Intellectual Skills**:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

#### Motor Skills:

- 1. Presentation Skills
- 2. Use of multi media

#### List of Projects:

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds

4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

The science of instrumentation system plays vital role in the development of technology. An electronic system has prime importance in the field of instrumentation. Most of the physical parameters can be converted into electrical signal with the use of transducers. The obtained electrical signal can be conditioned, processed, displayed and controlled with the use of advanced control system.

With the background of measuring instruments, this subject deals with measurement of different physical parameters like temperature, pressure etc. covering the entire gamut of industrial measurement. Different types of transducers used for measurement of different physical quantities with their construction, working principle, advantages, and disadvantages are studied through this subject.

#### **General Objectives:**

After studying this subject the students will be able to:

- 1) Understand the nature and working of instrumentation system used in industrial & general applications.
- 2) Classify the physical parameters with their proper units
- 3) Understand the concepts of different types of transducers

#### **Learning Structure:**

#### Practical: Skills to be developed:

#### **Intellectual Skills:**

- Selection of transducer based on application.
- > Interpretation of results.

#### Motor Skills:

- > Connection of different transducers with measuring system.
- > Measurement of various physical parameters using transducers.
- > Observation and plotting the characteristics.

#### List of Practicals:

| Sr. No. | Title of the Experiment                                                     |  |  |
|---------|-----------------------------------------------------------------------------|--|--|
| 1       | Measure displacement using LVDT                                             |  |  |
| 2       | Measure weight using strain gauge pressure transducer with cantilever setup |  |  |
| 3  | Measure pressure using Bourdon tube pressure gauge                           |
|----|------------------------------------------------------------------------------|
| 4  | Calibrate pressure gauge using Dead weight pressure gauge tester             |
| 5  | Determine the rate of flow of liquid in pipe using Rotameter                 |
| 6  | Calculate flow through pipe using orifice meter                              |
| 7  | Measure temperature of liquid using Resistance Temperature Detector (PT 100) |
| 8  | Measure temperature of liquid using thermocouple                             |
| 9  | Observe and interpret humidity of air using wet and dry bulb Hygrometer      |
| 10 | Measure speed of motor using non contact type photo electric tachometer.     |

### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

### **Rationale:**

Electronic Communication plays vital role in day to day activities. Development of communication Technology has increased its application in allied field of electronics including telephony, telegraphy, satellite , Mobile, RADAR, industrial controls, online application like internet banking, ATM machine, Wireless network, optical communication, Mobile communication system.

Analog communication is a foundation for all advanced subjects in communication engineering.

This subject will focus on the operation of analog transmission and reception techniques. This subject also deals with pulse modulation and their different types.

Study of Elements of Electronics, Electronic Devices and Circuits is prerequisite for Analog communication subject.

## **General Objectives:**

The student will able to

- 1. Know different electronic communication systems.
- 2. Understand concept of modulation and demodulation of AM / FM.
- 3. Understand the operation of AM/ FM transmitter and receiver.
- 4. Understand the operation of TV transmission and receptions.

## **Learning Structure:**

## **Theory Contents:**

| Topic<br>No | Theory                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Hrs. | Marks |

## Practical: Intellectual Skills:

1. Interpret the results of output waveforms

### Motor Skills:

- 1. Testing and observing the waveforms at various stages
- 2. Fault finding

### List of Practical's

- 1. Observe and draw the waveform of AM & calculate modulation index of AM
- 2. Observe and draw the waveform of FM & calculate modulation index of FM
- 3. Observe and draw the waveforms of FM modulator using IC 566.
- 4. Observe the wave forms at various points in AM receiver. Trouble shooting and fault finding in AM receiver.
- 5. Observe & Plot the graph of RF Characteristics of Radio Receiver: Selectivity, Sensitivity, Fidelity.
- 6. Generate PAM and observe the waveforms of PAM
- 7. Generate PWM, PPM and observe the waveforms of PWM, PPM using IC's.
- 8. Plot the radiation pattern of Dipole & Yagi-Uda antenna.
- 9. Plot the radiation pattern of basic microstrip patch antenna.
- 10. Trace: a) chroma section, b) picture tube, c) video amplifier of TV receiver
- 11. Voltage analysis of: a) chroma section, b) picture tube c) Video amplifier,
- 12. Voltage analysis of:
  - a) Vertical Section b) Horizontal Section c) Power supply of TV receiver.

### **Teaching and Examination Scheme:**

| Teaching Scheme |    |    |              |     |     | Examination | on Scheme |       |
|-----------------|----|----|--------------|-----|-----|-------------|-----------|-------|
| TH              | TU | PR | PAPER<br>HRS | TH  | PR  | OR          | TW        | TOTAL |
| 03              |    | 02 | 03           | 100 | 25# |             | 25@       | 150   |

### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

### **Rationale:**

Microprocessor plays important role in computer based application and is heart of the system. The Microprocessors along with memory and I/O's constitute a complete system for industrial application. Since most of the peripherals are 8 bit in nature and hence the 8 bit processor 8085 is introduced in microprocessor curriculum. It covers comprehensive study of architecture, programming and interfacing.

Microprocessor and its programming require the background information of principles of digital electronics. By completing this module student can write high level language program for peripheral controlling mechanism in embedded system.

### **General Objectives:**

### The student will be able to

- > Understand the architecture of 8-bit microprocessor.
- Learn instruction set and programming.
- ➤ Learn to interpret peripherals and its interfacing.
- Implement minimum system design.

### **Learning Structure:**

### **Theory:**

| Topic<br>No | Contents                                                                                                                                                                                                                                                                                                                                                                                                                       | Hours | Marks |

## **Practical:**

## **Intellectual Skills**:

- Select peripheral and interface to provide the solution for minimum system.
- Develop algorithm, flowchart, Assembly language program and execution

## Motor Skills:

- Load and execute the program in user memory of microprocessor kit.
- Observe the result in specific memory locationand registers.
- Develop logic for practical applications of microprocessor.

## **List of Practicals:**

- 1) Assembly language programs for addition and subtraction of 8 bit /16 bit numbers.
- 2) Assembly language program for block transfer.
- 3) Assembly language program to multiply two 8 bit numbers using add and shift techniques.
- 4) Find one's and two's compliment of a given number and exchange the lower and upper nibble of a byte.
- 5) Sort odd and even bytes from given 10 bytes and Find Largest and smallest numbers from given block.
- 6) Arrange given block in Ascending and descending order
- 7) Assembly language program to transmit / receive 8 bit serial data using SID and SID lines.
- 8) Interface simple switches and LEDs using 8255 and develop water level controller using 8085.
- 9) Generation of square wave using 8155 timer
- 10) Assembly language program to interface ADC/DAC with 8085.

### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Modern age technology has developed on high density and high speed electronics circuits. Integrated circuits are basis of these high density circuits enabled to reduce size, weight and cost of equipments. They have intrinsic features such as low power consumption, low noise and ease of design.

Today the growth of any industry depends upon electronics to great extent. Contents of this subject are the basic building blocks of different analog circuits.

Basic operating and designing principle of such a large collection of circuits establishes a foundation for understanding new development in the electronics field, instrumentation and power control. This subject acquaints student with general analog principles and design methodologies using integrated circuit for system design.

Prerequisites various devices and circuits studied in elements of electronics and electronic devices and circuits. Prospects- LSI, MSI, VLSI.

### **General Objectives:**

Students will be able to:

- Understand working principle of Op-Amp and IC555
- Develop electronics circuits using timer IC555 and Op-Amp

• Analyze the response of frequency selective circuits such as PLL with respect to the incoming signal.

## **Learning Structure:**

## **Application:**

## **Contents: Theory**

## Practical:

## **Intellectual Skills:**

- 1. Interpret the waveforms.
- 2. Find faults in circuits.

### Motor Skill:

1. Testing and Measurement.

## **List of Practicals:**

| Sr. No. | Title of the Experiment                                                                 |
|---------|-----------------------------------------------------------------------------------------|
|         | Determine the op-amp parameters:                                                        |
| 01      | • Input Offset Voltage (V <sub>io</sub> )                                               |
| 01      | • Output Offset Voltage (V <sub>00</sub> )                                              |
|         | Common mode rejection ratio (CMRR)                                                      |
| 02      | Determine the gain of Inverting and Non-inverting amplifier using op-amp and            |
| 02      | compare it with theoretical gain.                                                       |
| 03      | Verify the operation of Adder and Subtractor circuit using op-amp IC 741.               |
|         | Verify the working of active integrator and differentiator circuits using op-amp IC 741 |
|         | for following inputs:                                                                   |
| 04      | • Sine waveform                                                                         |
|         | • Square waveform                                                                       |
|         | Rectangular waveform                                                                    |
| 05      | Assemble V to I converter and I to V converter using IC 741 and measure the             |
| 03      | respective output.                                                                      |
|         | Verify the working of following comparator circuits using op-amp IC 741 and draw the    |
| 06      | input-output waveforms                                                                  |
| 00      | • Zero crossing detector                                                                |
|         | Active peak detector                                                                    |
| 07      | Assemble first order low pass Butterworth filter using op-amp and plot the frequency    |
| 07      | response and determine its cutoff frequency.                                            |
| 08      | Assemble Astable multivibrator circuit using IC 741. Plot the output waveform and       |
| 00      | determine the frequency of oscillations and duty cycle.                                 |
| 09      | Assemble Monostable multivibrator circuit using IC 555. Plot the output waveform        |
| 07      | and determine the on-time.                                                              |
| 10      | Assemble Schmitt trigger circuit using IC 555. Plot the output waveform and             |

|    | determine UTP and LTP                                                                             |
|----|---------------------------------------------------------------------------------------------------|
| 11 | Assemble Instrumentation amplifier circuit using IC 324 and determine the overall gain.           |
| 12 | Verify the operation of frequency Multiplier using PLL IC 565 and determine the output frequency. |

**Course Name : Electronics Engineering and Video Engineering Group** 

Course Code : ET/EJ/IE/IS/EN/EX/IC/MU/EV/DE/IU/ED/EI

Semester : Fourth

Subject Title : Visual Basic

Subject Code : 17043

#### **Teaching and Examination Scheme:**

| Teac | ching Scl | heme |              |    | Examinati | on Scheme |     |       |
|------|-----------|------|--------------|----|-----------|-----------|-----|-------|
| TH   | TU        | PR   | PAPER<br>HRS | TH | PR        | OR        | TW  | TOTAL |
| 01   |           | 02   |              |    |           |           | 25@ | 25    |

#### **Rationale:**

Today's most of the electronically operated devices, integrated circuits, controllers, equipments, gadgets are run by specific drivers/software. To understand design, develop and write drivers programming knowledge is required. To run the devices software has to be user friendly. New approach is to use graphical user interface. Graphical user interface can be implemented using visual software's.

Traditionally visual basic is the most popular, versatile, suitable, simple and commonly used visual programming language to write efficient, compact and portable interfaces, drivers/ software's.

The subject will enable the students to inculcate visual programming concepts and methodology used to write, debug, compile and execute simple visual basic programs using different powerful data types, built in visual controls and integrated visual basic environment (IDE) provided by Microsoft visual studio. Students will be exposed to event driven programming and bottom up approached used in objects oriented programming.

Students will understand how a complex interface can be easily implemented in visual basic with almost no programming expertise.

This course will lay the basic foundation of visual programming which will enable students to develop simple to complex programmable systems interfaces in the real world of work

## **General Objectives**

Students will able to.

- 1. Learn visual programming development environment, concepts and methodology.
- 2. Use essential components (visual tools ) of Visual software's
- 3. Develop the skill of visual basic programming to build custom standalone applications
- 4. Develop applications with Multiple documents interface (MDI) using common dialog, menus and graphics
- 5. Use ADO for database connectivity with different databases.
- 6. Create simple reports using data report, Seagate crystal reports and integrating it with visual basic
- 7. Develop applications using class modules

MSBTE - Final Copy Dt. 30/08/2013

## Theory

| Name of Topics                                                                        | Hours |
|---------------------------------------------------------------------------------------|-------|
| Topic 1] Introduction to Visual Environment                                           |       |
| Specific Objectives:                                                                  |       |
| Familiar with IDE of Visual basic                                                     |       |
| Use concepts of object based language                                                 |       |
| Use basic elements of visual interface                                                |       |
| Use properties, events and methods at design time and runtime                         |       |
| <ul> <li>Create objects, place them on forms</li> </ul>                               | 02    |
| Contents:                                                                             |       |
| 1.1 Concepts of visual programming object features properties methods events          |       |
| 1.7 Environment of VB – Menu har toolbar project explorer toolbox properties          |       |
| window form designer form layout immediate window                                     |       |
| 1.3 Concept of project elements of projects form their properties methods and events  |       |
| Topic 21 Introduction to Visual Pasia                                                 |       |
| Specific Objectives:                                                                  |       |
| Specific Objectives.                                                                  |       |
| Use uniferent data types Use neworful factures of arrays and collections              |       |
| Use powerful features of arrays and conections                                        |       |
| > write procedures and functions                                                      |       |
| > Call procedures and functions                                                       |       |
| > Differentiate between procedure and functions                                       | 0.2   |
| Use library functions for math and string operations                                  | 02    |
| > Use Inputbox and Msgbox functions                                                   |       |
| Contents:                                                                             |       |
| 2.1 Data types, variables, constants, arrays, collections                             |       |
| 2.2 procedures, Arguments, function, return values, control flow statements, loop     |       |
| statements, Nested control structures, exit statement                                 |       |
| 2.3 Math operators & formulas, logical operators, string functions, special functions |       |
| available in VB like Input Box (), Message Box (), Format ().                         |       |
| Topic 3] Controls and Events                                                          |       |
| Specific Objectives:                                                                  |       |
| Use basic controls                                                                    |       |
| Select appropriate controls for given data                                            |       |
| Set properties of different basic controls                                            |       |
| Call methods and events of basic controls                                             |       |
| Demonstrate the use of each control with simple examples                              | 02    |
| Contents:                                                                             | 02    |
| 3.1 Basic controls: Text box, list Box, Combo Box, Scroll Bar, frame, Option button,  |       |
| checkbox, command button, OLE controls                                                |       |
| 3.2 File, Drive, directory, Picture box, Image and timer controls .Designing a form   |       |
| using controls, concepts of event & properties, changing properties (runtime &        |       |
| design time) Important events of each control & creating applications using           |       |
| controls.                                                                             |       |
| Topic 4] Advance Controls & Events                                                    |       |
| Specific Objectives:                                                                  |       |
| Add extrinsic controls in an application                                              |       |
| Use common dialog box control and its properties such open, save as, font,            | 02    |
| color, print and help                                                                 | 03    |
| Use rich text box to design simple ms-word like application                           |       |
| Use and create explorer like utilities using tree view and list controls              |       |
| Familiar with windows common controls                                                 |       |

| Contents:                                                                               |    |
|-----------------------------------------------------------------------------------------|----|
| 4.1 Common Dialog Box controls, The Tree view and List, View controls, the rich         |    |
| textbox controls                                                                        |    |
| 4.2 Windows common controls – status Bar, Tab control, image list control, Important    |    |
| properties, changing properties at design or run time, event handling.                  |    |
| Topic 5] Module, Class Module, Mdi, Menu Graphics                                       |    |
| Specific Objectives:                                                                    |    |
| Write class modules                                                                     |    |
| Define functions and procedures in class module                                         |    |
| Access functions and procedures from class module                                       |    |
| Use multiple document interface                                                         |    |
| Design menu based applications such as notepad editor                                   |    |
| Work with graphic functions and methods                                                 | 03 |
| Contents:                                                                               |    |
| 5.1 Concept of module, class module, using class module to define functions,            |    |
| procedures, variables and accessing them using objects                                  |    |
| 5.2 MDI- MDI form and child form, Creation and use in                                   |    |
| 5.3 Menu: Creating own menu using menu editor, popup menu.                              |    |
| 5.3 Graphics: Basic controls – Line & shape control, line method, circle method, Pset   |    |
| method, RGB () Functions, Paint picture () method, Load picture () function.            |    |
| Topic 6] Database and Report                                                            |    |
| Specific Objectives:                                                                    |    |
| Create database                                                                         |    |
| Use ADO and its properties, methods and events                                          |    |
| Select appropriate concepts such as back-end and front-end                              |    |
| Make database connectivity with different databases                                     |    |
| Generate report using Data Report and Crystal Report                                    |    |
| Contents:                                                                               | 04 |
| 6.1 Concept of database, Record, Record set, Data control & its important properties    | 0. |
| 6.2 validating data, entering data, visual data manager.                                |    |
| 6.3 Programming with ADO (Active data objects), using ADO Objects at design time-       |    |
| connection, command, record set, parameter, Creating & closing a connection;            |    |
| executing a command,                                                                    |    |
| 6.4 Using ADO Objects at run time, attaching visual controls to record set at run time, |    |
| Using delete, save, search, update exit, new, add, methods.                             |    |
| 6.5 Report generation using data report and crystal report                              |    |
| Total                                                                                   | 16 |

## **TERM WORK:-**

## **Rationale:**

Most of the diploma holders join industries. Due to globalization and competition in the industrial and service sectors the selection for the job is based on campus interviews or competitive tests.

While selecting candidates a normal practice adopted is to see general confidence, ability to communicate and attitude, in addition to basic technological concepts.

The purpose of introducing professional practices is to provide opportunity to students to undergo activities which will enable them to develop confidence. Industrial visits, expert lectures, seminars on technical topics and group discussion are planned in a semester so that there will be increased participation of students in learning process.

## **Objectives:**

To develop the following skills:

## Intellectual skills:

- 1) Analyze information from different sources.
- 2) Prepare reports.

### Motor skills:

- 1) Present given topic in a seminar.
- 2) Interact with peers to share thoughts.
- 3) Prepare a report on industrial visit, expert lecture.

## **Learning Structure:**

## **Contents:**

| Activity | Content                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Hours |

www.engineeringforchange.org www.wikipedia.com www.slideshare.com www.teachertube.com

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

## INDUSTRIAL TRAINING (OPTIONAL)

## Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.
- Evaluation:- Report of Training attended and delivery of seminar and actual experience in Industry will be evaluated in fifth semester under Profession Practices-III and marks will be given accordingly out of 50.

#### Student Contact Hours Per Week: 32 Hrs.

## THEORY AND PRACTICAL PERIODS OF 60 MINUTES EACH.

### Total Marks : 850

@ - Internal Assessment, # External Assessment, No Theory Examination, \$ - Common to all branches, #\* Online Examination,

Abbreviations: TH-Theory, TU- Tutorial, PR-Practical, OR-Oral, TW- Term Work, SW- Sessional Work

\*\* Industrial Training (Optional) - Student can undergo Industrial Training of four weeks after fourth semester examination during summer vacation.

## Assessment will be done in Fifth semester under Professional Practices-III. They will be exempted from activities of Professional Practices-III of 5<sup>th</sup> Semester.

- > Conduct two class tests each of 25 marks for each theory subject. Sum of the total test marks of all subjects is to be converted out of 50 marks as sessional work (SW).
- Progressive evaluation is to be done by subject teacher as per the prevailing curriculum implementation and assessment norms.  $\geq$
- Code number for TH, PR, OR, TW are to be given as suffix 1, 4, 8, 9 respectively to the subject code.

**Course Name : All Branches of Diploma in Engineering & Technology** 

# Course Code : AE/CE/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG/AU

Semester : Fourth

Subject Title : Environmental Studies

Subject Code : 17401

**Teaching and Examination Scheme:** 

| Teaching Scheme |    |    |              |      | Examinati | on Scheme |    |       |
|-----------------|----|----|--------------|------|-----------|-----------|----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH   | PR        | OR        | TW | TOTAL |
| 01              |    | 02 | 01           | 50#* |           |           | 25 | 75    |

#### **#\* Online Theory Examination**

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment.
- 2. Know key issues about environment.
- 3. Understands the reasons for environment degradation.
- 4. Know aspects about improvement methods.
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation.

## **Learning Structure:**

## Theory:

| Topic and Contents                                                   | Hours | Marks |
|----------------------------------------------------------------------|-------|-------|
| Topic 1: Nature of Environmental Studies                             |       |       |
| Specific Objectives:                                                 |       |       |
| Define the terms related to Environmental Studies                    |       |       |
| State importance of awareness about environment in general public    | 01    | 0.4   |
| Contents:                                                            | 01    | 04    |
| • Definition, Scope and Importance of the environmental studies      |       |       |
| <ul> <li>Importance of the studies irrespective of course</li> </ul> |       |       |
| • Need for creating public awareness about environmental issues      |       |       |
| Topic 2: Natural Resources and Associated Problems                   |       |       |
| Specific Objectives:                                                 |       |       |
| Define natural resources and identify problems associated with       |       |       |
| them                                                                 |       |       |
| Identify uses and their overexploitation                             |       |       |
| Identify alternate resources and their importance for environment    |       |       |
| Contents:                                                            |       |       |
| 2.1 Renewable and Non renewable resources                            |       |       |
| Definition                                                           |       |       |
| Associated problems                                                  |       |       |
| 2.2 Forest Resources                                                 |       |       |
| General description of forest resources                              |       |       |
| • Functions and benefits of forest resources                         |       |       |
| • Effects on environment due to deforestation, Timber extraction,    |       |       |
| Building of dams, waterways etc.                                     | 0.4   | 10    |
| 2.3 Water Resources                                                  | 04    | 10    |
| Hydrosphere: Different sources of water                              |       |       |
| • Use and overexploitation of surface and ground water               |       |       |
| • Effect of floods, draught, dams etc. on water resources and        |       |       |
| community                                                            |       |       |
| 2.4 Mineral Resources:                                               |       |       |
| • Categories of mineral resources                                    |       |       |
| <ul> <li>Basics of mining activities</li> </ul>                      |       |       |
| <ul> <li>Mine safety</li> </ul>                                      |       |       |
| Effect of mining on environment                                      |       |       |
| 2.5 Food Resources:                                                  |       |       |
|                                                                      |       |       |
| • Food for all                                                       |       |       |
| Effects of modern agriculture                                        |       |       |
| World food problem                                                   |       |       |
| Topic 3. Ecosystems                                                  |       |       |
| Concept of Ecosystem                                                 |       |       |
| Structure and functions of ecosystem                                 | 01    | 04    |
| • Energy flow in ecosystem                                           |       |       |
| Major ecosystems in the world                                        |       |       |
| Topic 4. Biodiversity and Its Conservation                           |       |       |
| Definition of Biodiversity                                           | 02    | 06    |
| Levels of biodiversity                                               | 02    | 00    |
| • Value of biodiversity                                              |       |       |

| Threats to biodiversity                                          |    |    |
|------------------------------------------------------------------|----|----|
| Conservation of biodiversity                                     |    |    |
| Topic 5. Environmental Pollution                                 |    |    |
| Definition                                                       |    |    |
| • Air pollution: Definition, Classification, sources, effects,   |    |    |
| prevention                                                       | 02 | 00 |
| • Water Pollution: Definition, Classification, sources, effects, | 03 | 08 |
| prevention                                                       |    |    |
| • Soil Pollution: Definition, sources, effects, prevention       |    |    |
| • Noise Pollution: Definition, sources, effects, prevention      |    |    |
| Topic 6. Social Issues and Environment                           |    |    |
| Concept of development, sustainable development                  |    |    |
| • Water conservation, Watershed management, Rain water           |    |    |
| harvesting: Definition, Methods and Benefits                     | 02 | 10 |
| Climate Change, Global warming, Acid rain, Ozone Layer           | 05 | 10 |
| Depletion, Nuclear Accidents and Holocaust: Basic concepts       |    |    |
| and their effect on climate                                      |    |    |
| Concept of Carbon Credits and its advantages                     |    |    |
| Topic 7. Environmental Protection                                |    |    |
| Brief description of the following acts and their provisions:    |    |    |
| Environmental Protection Act                                     |    |    |
| • Air (Prevention and Control of Pollution) Act                  |    |    |
| • Water (Prevention and Control of Pollution) Act                | 02 | 08 |
| Wildlife Protection Act                                          | 02 | 08 |
| Forest Conservation Act                                          |    |    |
| Population Growth: Aspects, importance and effect on             |    |    |
| environment                                                      |    |    |
| Human Health and Human Rights                                    |    |    |
| Total                                                            | 16 | 50 |

## **Practical:** Skills to be developed:

## Intellectual Skills:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

## Motor Skills:

- 1. Presentation Skills
- 2. Use of multi media

## **List of Projects:**

**Note:** Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds
- 4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

### **Teaching and Examination Scheme**

| Teaching Scheme |    |    |              |    | Examinati | on Scheme |     |       |
|-----------------|----|----|--------------|----|-----------|-----------|-----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH | PR        | OR        | TW  | TOTAL |
| 02              |    | 02 | 02           | 50 |           |           | 25@ | 75    |

### NOTE:

> Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.

# Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work. (SW)

#### **Rationale:**

Electrical engineering is the basic engineering branch. Electric power supply is needed for running of mechanical and the chemical process equipment for which different electric motors are used, so in mech industry, the electrical engineer has to take care of various electrical installations with its maintenance.

The electrical engineer has to look after various aspects related to electrical engineering in respect of mechanical equipment. (Boilers, Steam turbine, steam engines)

There are the equipments that are used for generation of electrical power.

The content on boiler, steam turbine, and stem engine will enable the electrical engineer to adopt appropriate electrical engineering support for the efficient use of these equipments.

Topics on air compressors and pumps, turbine also provide necessary guide line in respect of electrical engineer. For trouble free working of these equipment with saving ion energy consumption.

### **General Objectives:**

Students should be able to

- 1. Know the function of different mechanical equipment along with their location.
- 2. Understand working of high pressure boilers and steam turbine and thermal power plant.
- 3. Know the operation and control of fuel and steam supply.
- 4. Enlist sources of waste heat from boiler, IC engine.
- 5. Describe internal combustion engine.

| Topic and Contents                                                   | Hours | Marks |
|----------------------------------------------------------------------|-------|-------|
| Topic 1: Boilers, Steam turbines, Steam engine                       |       |       |
| Specific Objectives:                                                 |       |       |
| Calculate the properties of two phase system by using steam table    |       |       |
| Explain construction & working of boilers                            |       |       |
| ➢ Identify the heat losses & malfunctioning of boilers               |       |       |
| Contents:                                                            |       |       |
| 1.1 Construction and working of critical and super critical boilers. | 10    | 16    |
| 1.2 Boiler efficiency                                                |       | -     |
| 1 3 Boiler Act (for remedial measure)                                |       |       |
| 1 4 Classification of turbines                                       |       |       |
| 1.5 Impulse and reaction turbine                                     |       |       |
| 1.6 Power developed by turbine                                       |       |       |
| 1.7 Different power losses in turbine                                |       |       |
| Topics 2: I C Engines                                                |       |       |
| Spacific Objectives:                                                 |       |       |
| Specific Objectives.                                                 |       |       |
| Calculate performance of engine Identify the molfunctioning Causes   |       |       |
| Contentar                                                            |       |       |
| Contents:                                                            |       |       |
| 2.1 Classification of I.C. engines.                                  | 06    | 10    |
| 2.2 Testing and performance of I. C. engines.                        |       |       |
| Break power                                                          |       |       |
| Indicated power                                                      |       |       |
| > Frictional power                                                   |       |       |
| 2.3 Fault finding and remedial action.                               |       |       |
| 2.4 Starting motor of I.C. engine.                                   |       |       |
| Topic 3: Air Compressor                                              |       |       |
| Specific Objectives:                                                 |       |       |
| Know the working principles of air compressor                        |       |       |
| Identify Methods of energy saving                                    |       |       |
| Identify the fault & suggest remedies                                |       |       |
| Contents:                                                            |       |       |
| 3.1 Introduction                                                     | 08    | 12    |
| 3.2 Definition : Compression ratio, Compressor capacity, Free air    |       |       |
| Deliver, swept volume.                                               |       |       |
| 3.3 Reciprocating and rotory air compressor, their working and       |       |       |
| Construction.                                                        |       |       |
| 3.4 Methods of energy saving in compressor.                          |       |       |
| 3.5 Fault finding and remedial action.                               |       |       |
| Topic 4: Pumps                                                       |       |       |
| Specific Objectives:                                                 |       |       |
| Selection of pumps for various applications                          |       |       |
| ➢ Know the construction & working of pumps                           |       |       |
| Identify the trouble shooting of IC engines                          | 00    | 10    |
| Contents:                                                            | 08    | 12    |
| 4.1 Classification of pumps.                                         |       |       |
| 4.2 Type of pumps and their working.                                 |       |       |
| 4.3 Power required to run the pump.                                  |       |       |
| 4.4 Fault finding and remedial action.                               |       |       |
| Total                                                                | 32    | 50    |

#### Practical: Skills to be developed:

#### Intellectual Skills:

- 1. Understand vapour process of steam boilers & different mountings & accesories
- 2. Analyze the performance of pumps& turbines

#### Motor Skills:

- 1. Use pressure & temp measuring device
- 2. Operate I C Engine & know the working of dynometers

#### **List of Practicals:**

- (1)Write a report on visit to Sugar factory/steam power plant consisting of
  - (a)Working of boiler (b) Working of turbine (c) Foundation of boiler.
- (2) Write a report on visit to Sugar factory/steam power plant to observe

(a) Operation of condenser (b) Operation of cooling tower.

- (3) To determine brake power of single cylinder diesel engine by conducting trial on it.
- (4) To determine overall efficiency of a centrifugal pump by conducting a trial test on it and observe foundation of pump.
- (5) Observe the operation of air compressor for identification of sources of air leakage.
- (6) Observe the operation of reciprocating pump and identify types of faults and suggest remedial measures.

| TH  | TU        | PR   | PAPER<br>HRS       | TH  | PR  | OR | TW  | TOTAL |
| 04  |           | 02   | 03                 | 100 | 50# |    | 25@ | 125   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

A diploma engineer is required to work in various capacities such as development, innovation & maintenance engineer, in today's highly automated industrial environment. Therefore the basic knowledge of industrial instrumentation and control is a necessary prerequisite.

He should be conversant with the basic principles of transduction of physical variables into electrical signals, signal conditioning circuits, basic data acquisitions systems.

#### **General Objectives:**

- 1. Identify different components of instrumentation system.
- 2. Understand different qualitative parameters of instruments.
- 3. Identify appropriate transducers for different physical variables.
- 4. Understand different signal conditioning circuits.
- 5. Understand different Data Acquisition System types and their use.
- 6. Design of complete system for measurement of process variables.

| Topic and Detailed Content                                                         | Hours | Marks |
|------------------------------------------------------------------------------------|-------|-------|
| Topic 1: Introduction to Instrumentation System                                    |       |       |
| Specific Objectives:                                                               |       |       |
| State basic block diagram of instrumentation system.                               |       |       |
| Identify static and dynamic characteristics of instruments                         |       |       |
| Contents:                                                                          |       |       |
| 1.1 Basic instrumentation system                                                   |       |       |
| Basic block diagram of generalized Instrumentation system                          |       |       |
| • Need of each block.                                                              |       |       |
| 1.2 Static characteristics of instruments                                          |       |       |
| Accuracy and measurement uncertainty                                               |       |       |

#### **Practical:** Skills to be developed:

#### **Intellectual Skills:**

- 1) Selection of transducer for given physical variable.
- 2) Analysis of the transducer characteristics.
- 3) Selection of signal conditioning circuit.

#### **Motor Skills:**

Testing and calibration of the given instrument.

#### List of Practicals:

- 1. Measure output voltage and Displacement in LVDT and draw a graph to verify the characteristics of Output Voltages Vs Displacement
- 2. Measure output Voltage and Force in Strain Guage nd draw graph to verify the characteristics of Force Vs Output Volatage
- 3. Verify the relation between the output voltage and temperature by using a RTD (PT 100) thermistor and Thermocouple
- 4. Use a Level measuring transducer to measure level and output voltage & verify the characteristics of the transducer.
- 5. Plot the graph and verify the characteristics of LDR/Photo diode and photo transistor
- 6. Pressure measurement using diaphragm type Pressure gauge
- 7. Verify the function of OPAMP as inverting/non inverting amplifier, adder, subtractor.
- 8. Verify the function of OPAMP as comparator, Schmitt trigger
- 9. Plot characteristics of primary and secondary current for a current transformer.
- 10. Measure angular velocity using optical tachometer.

#### NOTE:

> Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.

# > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

This subject is intended to teach the student facts, concepts, principles and procedures for the operations, testing and maintenance of electric machines such as dc motors, generators and transformers. Students will also be able to analyze characteristics of electric machines and transformers.

These machines are used in power system for generation, transmission & distribution, utilization systems and also in traction systems. Knowledge gained by the students will be used in the study of technological subjects such as power system operation & control, utilization system, switchgear & protection, testing and maintenance of electrical equipment and modern electric traction.

The students will be able to know the use of transformer in measurement, use of CT's and PT's in control circuits, fault locations etc. The knowledge and skill gained by the student will be used while working as technicians in discharging technical functions such as electrical supervisor, testing engineer and procurement engineer.

#### **General Objectives:**

#### Students will be able to-

- 1. Understand the laws governing the operation of electrical machines.
- 2. Understand the working principles of different DC machines and transformer.
- 3. Know the constructional details of the DC machines and transformer.
- 4. Know the areas of application of the various dc machines and different types of transformers.

|     | Total                                                                                                                                                     | 64 | 100 |

#### Practical: Skills to be developed:

#### Intellectual Skills:

- 1. To understand the concepts of DC machines and transformers.
- 2. To identify different parts and windings of DC machines and transformers.
- 3. Ability to test, plot and verify the characteristics.
- 4. Ability to interpret the test results.

#### Motor Skills:

- 1. To draw the circuit diagram.
- 2. To measure different parameters using different meters.
- 3. To connect different meters according to circuit diagram.
- 4. To follow sequence of operations.
- 5. To measure the values and note down the readings.
- 6. To operate DC machines and transformers.

#### **List of Practicals:**

- 1. Observe and identify different constructional parts of D. C machine and identify different windings by resistance measurement.
- 2. Start a D. C shunt motor and reverse its direction of rotation.
- 3. Control the speed of D.C series motor by flux control and armature resistance control.
- 4. Perform load test on D. C series motor and plot its performance characteristics.
- 5. Perform brake test on D. C shunt motor and plot speed Torque characteristics.
- 6. Determine transformation ratio, regulation and efficiency of single phase transformer by direct loading.
- 7. Perform open circuit and short circuit test on single phase transformer and determine equivalent circuit constants, regulation and efficiency.
- 8. Perform parallel operation of single phase transformer and determine the load sharing.
- 9. Visit a transformer manufacturing unit /repairing workshop and observe the constructional details of a three phase distribution transformer and identify various parts.
- 10. Perform polarity test and phasing out test on a three phase transformer.

Course Name : Electrical Engineering Group Course Code : EE/EP Semester : Fourth Subject Title : Industrial Electrical Systems - I Subject Code : 17416

#### **Teaching and Examination Scheme:**

| Teaching Scheme |    |    |              |     |    | Examination | on Scheme |       |
|-----------------|----|----|--------------|-----|----|-------------|-----------|-------|
| TH              | TU | PR | PAPER<br>HRS | TH  | PR | OR          | TW        | TOTAL |
| 03              | 01 | 02 | 03           | 100 |    | 25#         | 25@       | 150   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- ➢ Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

A diploma engineer is required to work as supervisor & knowledge worker in different organizations and is responsible to provide electrification. Maintain supply prepare design, estimates, read drawing, IE rules, data tables, specification, for all types electrical installation, Provision & maintaining earthing & all protective devices like MCCB,ELCB etc. Also Knowledge of maintenance, LT Lines, transformers, types of cables & wires are essential. Hence this core subject has been included at fourth semester in this curriculum.

#### **General Objectives:**

#### The Students will be able to: -

- 1. Read & interprets Electrical Installation drawings.
- 2. Understand & apply IE rules.
- 3. Make use of data tables & specification of wire, cables, LT lines & Distribution Transformer, MCCB, ELCB.
- 4. Understand principles & procedures of earthing.
- 5. Know basic terms to prepare design & estimate of installation.
- 6. Understand & apply procedures for contracts & tenders.

#### **Application:**

| Topics and Contents                                                                                             | Hours | Marks |
|-----------------------------------------------------------------------------------------------------------------|-------|-------|
| 1. Drawings and IE rules                                                                                        |       |       |
| Specific Objectives                                                                                             |       |       |
| Understand different types of electrical Installation                                                           |       |       |
| Know and read Electrical drawings & symbols                                                                     |       |       |
| ➤ Know IE rules                                                                                                 |       |       |
| Classification of electrical installations                                                                      | 04    | 10    |
| General requirements of electrical installation                                                                 |       |       |
| • Reading & interpretation of electrical engineering drawings & symbols                                         |       |       |
| related to installations                                                                                        |       |       |
| • Representation of different types of diagrams, such as schematic, circuit,                                    |       |       |
| wiring diagram and its single line representation as per IS code.                                               |       |       |
| IE rules related to electrical installation                                                                     |       |       |
| 2. Service connections                                                                                          |       |       |
| Specific Objectives                                                                                             |       |       |
| <ul> <li>Select appropriate method for service connection</li> </ul>                                            |       |       |
| Differentiate between various service connections                                                               |       |       |
| Concept of service connection                                                                                   | 04    | 10    |
| • Types of service connections and their features                                                               |       |       |
| Methods of installation of service connection                                                                   |       |       |
| • Differentiate between underground and overhead service connection                                             |       |       |
| • Service connection for 11 KV H. T. Consumer                                                                   |       |       |
| 3. Electrification of residential Installation                                                                  |       |       |
| Specific Objectives                                                                                             |       |       |
| Select wires and wiring methods as per the requirement                                                          |       |       |
| Prepare comparison chart of various wiring accessories                                                          |       |       |
| Use given guidelines for residential installation                                                               |       |       |
| Calculate total electrical load                                                                                 |       |       |
| • Types of wires and wiring methods as per IS No.                                                               |       |       |
| • General rules and guidelines for installation of residential electrification<br>and positioning of equipments |       |       |
| <ul> <li>Calculation of total electrical load in the residential installation</li> </ul>                        |       |       |
| • Procedure for the design of number of sub circuits                                                            |       |       |
| • Method of drawing single line diagram                                                                         |       |       |
| <ul> <li>Selection of type of wire and wiring method</li> </ul>                                                 | 12    | 24    |
| <ul> <li>Load calculation and selection of size of wire by considering overload and</li> </ul>                  |       |       |
| future expansion                                                                                                |       |       |
| • Determine length of batten and length of wire                                                                 |       |       |

#### **Tutorials:**

- 1. Electrical installation scheme for small bungalow or house. Draw wiring diagram and prepare detailed estimation and costing.
- 2. Electrical installation scheme for commercial building/ floor mill. Draw wiring diagram and prepare detailed estimation and costing.
- 3. Electrical installation scheme for small industry/factory/workshop/agriculture pump . Draw single line diagram and prepare detailed estimation and costing. Draw the circuit diagram

#### **Assignments:**

Skills to be developed:

#### **Intellectual Skills:**

- 1. Identify and apply different designing methods as per the requirements
- 2. Select proper ratings
- 3. Ability to analyse and select appropriate methods for estimation and costing

#### Motor Skills:

- 1. Drawing skill.
- 2. Measuring dimensions

#### List of Assignments: Problems & sheets on following topics.

- 1) Electrical estimation & design of residential consumers (for flats/Bungalows/Row houses)
- 2) Electrical estimation & design of Commercial consumers (for Malls/Colleges/Hospitals, Banks)

- 3) Electrical estimation & design of Agricultural consumers (Pump jets/submersible pump)
- 4) Electrical estimation & design of small & medium Industrial consumers.
- 5) Electrical Installation & layout preparation of your college campus.
- 6) Preparation of a NIT (Notice Inviting Tender)

Note: Estimations be made for loads up to 100 KVA

#### **Learning Resources:**

1. Books:

| Sr.<br>No. | Name of the Author       | Title of the book                            | Name of the Publisher        |
|------------|--------------------------|----------------------------------------------|------------------------------|
| 1          | J.B.Gupta                | Electrical Installation Estimating & costing | S.K.Kataria & sons New Delhi |
| 2          | Raina Bhattachraya       | Estimating dsign & costing                   | New Age                      |
| 3          | Allasappan &<br>Ekambarm | Estimating design & costing                  | Tata McGraw hill             |
| 4          | S L Uppal                | Estimating & costing                         | Khanna Publiser              |
| 5          | Surjit Singh             | Electrical Estimating & costing              | Dhanpat Rai & co.            |

- 2. ISO, IS, BS standards, Data Sheets, IE Rules Handbook IS/International code: IS5909, 7733, 2174, 732, 4648
- 3. Charts, Models, CDs, Transparencies,

#### 4. Websites:

http://www.bestestimatepro.com/ bieap.gov.in/estimatingandcosting.pdf http://indiacatalog.com/web\_directory/electrical/electrical.html Course Name : Electrical Engineering Group Course Code : EE / EP Semester : Fourth Subject Title : Transmission & Distribution of Electrical Power Subject Code : 17417

#### **Teaching and Examination Scheme:**

| Teaching Scheme |    |    |              |     | Examinati | on Scheme |    |       |
|-----------------|----|----|--------------|-----|-----------|-----------|----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH  | PR        | OR        | TW | TOTAL |
| 04              |    |    | 03           | 100 |           |           |    | 100   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Electrical Diploma Engineers should know Transmission Voltages, Distribution Voltage. They should be able to identify various components & there functions. They will be able to measure system performance. They will use this knowledge in studying Switchgear & Protection on completing the study of Generation, Transmission, Distribution, Switchgear, Protection & utilization of electrical energy, Students will be work as electrical engineer in power industry.

#### General Objectives: Student will be able to: -

- 1. Know various types of Transmission & distribution system.
- 2. Identify various components & know their functions.
- 3. Know types of conductors used in transmission and distribution circuits
- 4. Know the effect of changes in parameters on performance of the lines
- 5. Draw substation layout as per the requirements.

#### Applications

|                                                                                         | 1  |    |

#### NOTES:

- 1. Visit to 33 / 11 KV Substation.
- 2. Visit to11KV/400V Distribution Substation in Campus.
- 3. Observe Samples of ACSR Conductors and Insulators.

These visits may be arranged under Professional Practice.

#### **Rationale:**

Most of the diploma holders join industries. Due to globalization and competition in the industrial and service sectors the selection for the job is based on campus interviews or competitive tests.

While selecting candidates a normal practice adopted is to see general confidence, ability to communicate and attitude, in addition to basic technological concepts.

The purpose of introducing professional practices is to provide opportunity to students to undergo activities which will enable them to develop confidence. Industrial visits, expert lectures, seminars on technical topics and group discussion are planned in a semester so that there will be increased participation of students in learning process.

#### **Objectives:**

Student will be able to:

- 1. Acquire information from different sources.
- 2. Prepare notes for given topic.
- 3. Present given topic in a seminar.
- 4. Interact with peers to share thoughts.
- 5. Prepare a report on industrial visit, expert lecture.

# Course Name : All Branches of Diploma in Engineering & Technology Course Code : AE/CE/CH/CM/CO/CR/CS/CW/DE/EE/EP/IF/EJ/EN/ET/EV/EX/IC/IE/IS/ ME/MU/PG/PT/PS/CD/CV/ED/EI/FE/IU/MH/MI/DC/TC/TX/FG Industrial Training (Optional) after 4<sup>th</sup> semester examination.

Note:- Examination in Professional Practices of 5<sup>th</sup> Semester.

#### INDUSTRIAL TRAINING (OPTIONAL)

#### Rational:-

There was a common suggestion from the industry as well as other stakeholders that curriculum of Engineering and Technology courses should have Industrial training as part of the curriculum. When this issue of industrial training was discussed it was found that it will be difficult to make industrial training compulsory for all students of all courses as it will be difficult to find placement for all the students. It is therefore now proposed that this training can be included in the curriculum as optional training for student who is willing to undertake such training on their own. The institutes will help them in getting placement or also providing them requisite documents which the student may need to get the placement.

Details:- Student can undergo training in related industries as guided by subject teachers / HOD.

- The training will be for four weeks duration in the summer vacation after the fourth semester examination is over.
- The student undergoing such training will have to submit a report of the training duly certified by the competent authority from the industry clearly indicating the achievements of the student during training. This submission is to be made after joining the institute for Fifth semester.
- The student completing this training will have to deliver a seminar on the training activities based on the report in the subject Professional Practices at Fifth Semester.
- The student undergoing this training will be exempted from attending activities under Professional Practices at Fifth semester except the seminar. The report, the delivery of the seminar and actual experience in training will be evaluated as term work and will be given marks out of 50.
- The students who will not undergo such training will have to attend Professional Practices Classes/activities of fifth semester and will have to complete the tasks given during the semester under this head.
- There work will be evaluated on their submissions as per requirement and will be given marks out of 50. Or student may have to give seminar on training in Industry he attended.
- Institute shall encourage and guide students for Industry training.

#### **#\* Online Theory Examination**

NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

Environment essentially comprises of our living ambience, which gives us the zest and verve in all our activities. The turn of the twentieth century saw the gradual onset of its degradation by our callous deeds without any concern for the well being of our surrounding we are today facing a grave environmental crisis. The unceasing industrial growth and economic development of the last 300 years or so have resulted in huge ecological problems such as overexploitation of natural resources, degraded land, disappearing forests, endangered species, dangerous toxins, global warming etc.

It is therefore necessary to study environmental issues to realize how human activities affect the environment and what could be possible remedies or precautions which need to be taken to protect the environment.

The curriculum covers the aspects about environment such as Environment and Ecology, Environmental impacts on human activities, Water resources and water quality, Mineral resources and mining, Forests, etc.

General Objectives: The student will be able to,

- 1. Understand importance of environment
- 2. Know key issues about environment
- 3. Understands the reasons for environment degradation
- 4. Know aspects about improvement methods
- 5. Know initiatives taken by the world bodies to restrict and reduce degradation

| Topic and Contents                                                                                                   | Hours | Marks |
|----------------------------------------------------------------------------------------------------------------------|-------|-------|
| Topic 1: Nature of Environmental Studies                                                                             |       |       |
| Specific Objectives:                                                                                                 |       |       |
| Define the terms related to Environmental Studies                                                                    |       | 04    |
| State importance of awareness about environment in general public                                                    | 01    |       |
| Contents:                                                                                                            | 01    | 04    |
| • Definition, Scope and Importance of the environmental studies                                                      |       |       |
| Importance of the studies irrespective of course                                                                     |       |       |
| Need for creating public awareness about environmental issues                                                        |       |       |
| <b>Topic 2: Natural Resources and Associated Problems</b>                                                            |       |       |
| Specific Objectives:                                                                                                 |       |       |
| Define natural resources and identify problems associated with                                                       |       |       |
| them                                                                                                                 |       |       |
| Identify uses and their overexploitation                                                                             |       |       |
| Identify alternate resources and their importance for environment                                                    |       |       |
| Contents:                                                                                                            |       |       |
| 2.1 Renewable and Non renewable resources                                                                            |       |       |

#### Practical: Skills to be developed:

# Intellectual Skills:

- 1. Collection of information, data
- 2. Analysis of data
- 3. Report writing

# **Motor Skills:**

- 1. Presentation Skills
- 2. Use of multi media

# List of Projects:

Note: Any one project of the following:

- 1. Visit to a local area to document environmental assets such as river / forest / grassland / hill / mountain
- 2. Visit to a local polluted site: Urban/Rural/Industrial/Agricultural
- 3. Study of common plants, insects, birds

5

4. Study of simple ecosystems of ponds, river, hill slopes etc

Prepare a project report on the findings of the visit illustrating environment related facts, analysis and conclusion. Also suggest remedies to improve environment.

| Course Name   | : Electronics Engineering Group |
|---------------|---------------------------------|
| Course Code   | : EJ/EX/ET/EN/IS/IC/IE/IU       |
| Semester      | : Fourth                        |
| Subject Title | : Industrial Measurements       |
| Subject Code  | : 17434                         |
|               |                                 |

**Teaching and Examination Scheme:** 

| Teaching Scheme |    |    |              |     | Examinati | on Scheme |     |       |
|-----------------|----|----|--------------|-----|-----------|-----------|-----|-------|
| TH              | TU | PR | PAPER<br>HRS | TH  | PR        | OR        | TW  | TOTAL |
| 03              |    | 02 | 03           | 100 |           |           | 25@ | 125   |

#### NOTE:

- > Two tests each of 25 marks to be conducted as per the schedule given by MSBTE.
- > Total of tests marks for all theory subjects are to be converted out of 50 and to be entered in mark sheet under the head Sessional Work (SW).

#### **Rationale:**

The science of instrumentation system plays vital role in the development of technology. An electronic system has prime importance in the field of instrumentation. Most of the physical parameters can be converted into electrical signal with the use of transducers. The obtained electrical signal can be conditioned, processed, displayed and controlled with the use of advanced control system.

With the background of measuring instruments, this subject deals with measurement of different physical parameters like temperature, pressure etc. covering the entire gamut of industrial measurement. Different types of transducers used for measurement of different physical quantities with their construction, working principle, advantages, and disadvantages are studied through this subject.

#### **General Objectives:**

After studying this subject the students will be able to:

- 1) Understand the nature and working of instrumentation system used in industrial & general applications.
- 2) Classify the physical parameters with their proper units
- 3) Understand the concepts of different types of transducers

## **Learning Structure:**

# **Theory Contents:**

| Topic<br>No | Theory                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Hrs. | Marks |
